PERSONAL COM

LONELY Genie I Microcomputer, early eighties, with large peripheral family but currently unattached, would like to meet interesting, attractively packaged software, Genie or Tandy specification, for programming, problem solving, entertainment and long-lasting friendship. Reply in confidence. Box No RS232.

ingenious ...but lonely!

Buying your first Genie I microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box,**

which immediately expands your Genie's capacity to 32K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or S100 cards.

Then there is the

Printer,

a compact unit with 80 column, 5 x 7 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

The **Disk Drive**

gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter. New Dual Disk Drive now available!

Finally, there is Genie's very own

12" Monitor,

a must if you want to let the rest of the family watch their T.V. in peace!

Available in B & W or green tube.

The supreme advantage of the Genie I system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

SPECIAL TECHNICAL GENIE

HOT - LINE ON 0629 4995

for all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

Please send me **FREE**, 16 page colour brochure on the Genie Computer System. I enclose 25p postage.

YOUR COMPUTER

YOUR LETTERS:

Poking fun at the Spectrum; machine code.

NEWS:

Two new £200 colour micros — MPF-II and Colour Genie; Jupiter's £90 fast Forth Ace; Acorn's BBC voice unit.

COMPUTER CLUB:

This month computers at the Fox and Goose read out poetry to the West London Computer Club.

BREAK THE SOUND BARRIER:

Tim Langdell tries everything from bleeps to speech synthesisers as he tries to persuade his ZX-81 to speak and be spoken to.

SPECTRUM SOFTWARE:

Boris Allan confronts random Beefeaters and looks into a crystal ball as he checks out Spectrum programs.

NEUBRAIN REVIEW:

Two years after its launch, the NewBrain is now available in quantity. Simon Beesley finds out who needs a NewBrain now.

INTERVIEW:

Hermann Hauser, Acorn's technical director, reveals the Electron's secrets and tells how the BBC Micro was made.

VIC DAMBUSTER:

Stop Dave Smallbrook's Nibblers and save the dam.

INTELLIGENT TYPEWRITER:

When it comes to word processing Dave Berry's routines will make your machine brighter than the average Atom.

B-52 BOMB-RUN:

Unless the bomb aimer can clear a landing strip below, S A Nicholls's ZX-81 game will crash.

BBC TIPS:

More operating system calls and special effects.

VIC-20 ASSEMBLER:

Philip Horton puts it all together.

SPECTRUM DISASSEMBLER:

David Horne takes it all apart.

BASIC DIALECTS:

Tony Edwards makes translating easier.

ZX-81 INDEXER:

Indexing a record collection or library is simple with John Watson's program.

ZX-81 MACHINE CODE:

Kathleen Peel continues her guided tour through machine code.

MIDWICH MC

Tough, cheap and versatile — will the new Midwich MC impress engineers and scientists as much as it did John Dawson?

RESPONSE FRAME:

More answers to your technical queries.

FINGERTIPS:

Our pocket computer and calculator column.

SOFTWARE FILE:

Eight packed pages of programs for the ZX-81, Spectrum, BBC Micro, Vic and others.

COMPETITION CORNER:

Result of July's Birdcatcher and a new competition for a £15 book token. NewBrain crossword falls between pages 26 and 27.

EDITORIAL

MANUFACTURERS HAVE PUSHED the prices of micros offering colour and sound into a steep nosedive; no-one will be too bothered if they never pull out of it. But to be able to drop so far so quickly the machines at the lowest end of the price range have had to jettison all unnecessary weight. In the name of price-streamlining, full sound facilities are often nudged through the escape-hatch at an early stage.

As a result we have the Spectrum, which seems to have been designed to satisfy popular demand for inaudible noise, and the Dragon 32's endearing croak. This kind of facility makes the whole theme of sound appear limited. Yet until now low-cost computing has neglected everything from music, through synthetic speech to voice recognition.

Sound will be at the very heart of the way micros operate and are operated in the near future, and games-playing may well be the force which will put it in that position. After all, joysticks and track-balls had languished in computer laboratories until the advent of consumer computer games.

The prospect of large sales of games using, say, speech recognition — the most problematical area in sound — could make manufacturers put more money into its development. Then those who enjoy battle games could easily find themselves in command of a squadron of aircraft on the screen, giving verbal "bandits at two o'clock"-type warnings to fellow pilots while fending off attacks using joystick control.

If that sounds too futuristic, there are instances much closer to the present where sound could be used and for which relatively inexpensive hardware already exists. As usual, software development lags behind. Take, for example, computer speech. You can buy specialised chips which hold all the phonemes in English but hours must be spent programming the device to speak even the simplest phrases with the correct pronunciation and inflection. Music must be the most obviously neglected area — the chips exist and a small piano-format keyboard could be offered with most micros for little extra cost. It would be easier to connect than a joystick.

Tomorrow's computer buffs will be mystified that manufacturers only turned to sound when they wanted a new feature to tempt the buyer. As they chat with their machines they will wonder how we ever managed without it.

ZX99

AUTOMATIC TAPE CONTROLLER FOR THE SINCLAIR ZX81

● DATA PROCESSING

The ZX99 gives you software control of up to four tape drives (two for reading, two for writing) allowing merging of data files. This is achieved by using the remote sockets of the tape drives, controlled by USR statements or commands.

● RS232C INTERFACE

The ZX99 has an RS232C output allowing connection with any such printer using the full ASCII character code (you can now print on plain paper in upper or lower case, and up to 132 characters per line) at a variable baud rate up to 9,600

● SPECIAL FEATURES

There are so many special features it is difficult to list them all, for example:

AUTOMATIC TAPE COPY: You can copy a data file regardless of your memory capacity as it is processed through the Sinclair block by block.

TAPE BLOCK SKIP: Without destroying the contents of RAM

DIAGNOSTIC INFORMATION: To assist in achieving the best recording settings.

The ZX99 contains a 2K ROM which acts as an extension to the firmware in the Sinclair ROM. The ZX99's ROM contains the tape drive operating system and the conversion to ASCII for the RS232C output.

There is an extension board on the rear to plug in your RAM pack (larger than 16K if required). The unit is supplied with one special tape drive lead, more are available at £1 each.

Now only
£49.95

plus
£2.95p+p

● ZX99 SOFTWARE

We now have available "Editor 99", a quality word processing program including mail-merge, supplied on cassette for £9.95. Also following soon:

- * Stock Control (October)
- * Sales Ledger (November)
- * Business Accounts
- * Debtors Ledger
- * Tax Accounting

● FERGUSON CASSETTE RECORDER £28 inc. p&p.

Tested with ZX81, Acorn, BBC, Dragon etc. etc.
Features: Din, Ear, Mic. and Remote sockets,
Tape Counter, Tone Control, Built-in Mic.,
Autostop. Battery/mains. Recommended by
Acorn for use with BBC computer.

● STAR DP8480
RS232C (SERIAL) **£285** plus £6
Securicor delivery
CENTRONICS (PARALLEL) **£265**
plus £6 Securicor delivery

This professional printer works with almost any computer with very good upper and lower case typeface.

- Bi-directional
- 80 column width (10" paper)
- Switchable - Tractor or Friction Feed
- 80 chrs. per second

● 2,000 SHEETS OF
PRINTER PAPER
£19.50 plus £3.50 p&p.

● BBC CASSETTE LEAD

7 pin plug to two 3.5mm plugs and one 2.5mm plug.
Only £2 inc. P & P.

Other leads available - please telephone.

● E690 REVOLVING CASSETTE RACK

- Single - £2.99 (holds 32 tapes or 20 in cases)
- Double - £5.99 (holds 64 tapes or 40 in cases)
- Treble - £8.99 (holds 96 tapes or 60 in cases)
- Quad - £11.99 (holds 128 tapes or 80 in cases)

All plus £1 p&p.

COMPUTER CASSETTES

High quality, screw assembled cassettes supplied with library boxes. Any lengths available.

Spectrum

Spectrum is a new, rapidly expanding group of independent retailers who specialise in selling a range of popular home computers.

Our group policy is simple: we won't be beaten on price and 'know-how'. We can make this claim because our bulk buying power ensures that we select and buy at the best prices and then can pass on the benefits to you.

We guarantee if you find an item advertised and in stock at any other retailer at a better price than us, we will match that price.

You will see we quote our prices both including and excluding VAT - no hidden 15% to suddenly uplift your bill but also making our prices easier to compare with our competitors.

To ease payment we accept Barclaycard and Access as well as our own Spectrum Charge Card. Longer term credit terms are also available.

We believe our product 'know-how' is crucial to you as a customer. In every one of our centres there are personnel who have been trained by the manufacturers or distributors themselves. So we know what we are talking about on the products we sell and can help every customer, including the complete beginner, find and understand the equipment to suit his or her needs. For us it's not just a matter of simply handing over a box and leaving you on your own to figure it out. Our service includes 'hands on' experience that we can pass on to you.

After sales care is also well catered for. Our own Spectrum Service Centres will insure that should your machine 'go down' we will get it up and running as quickly as possible. We can also offer extended warranties at reasonable prices.

When it comes to mail order delivery we use Securicor for despatch to anywhere in the British Isles. The cost is low and the service is good. Further details are available from your local shop at the time of ordering.

Finally, we should point out that although not every Spectrum centre carries every advertised item, they can always be obtained quickly from our central warehouse. If you have any difficulty, please telephone Spectrum Customer Service on (0727) 66646.

Spectrum Computer Group is a division of Spectrum (UK) Ltd - Britain's largest photographic retailing group.

ATARI®

Developed by the Company famous for its TV and arcade games the Atari Computers have superb colour graphics and facilities for the manipulation of visuals on the screen.

In-built "player-missile-graphics" enable the user to compose games to very professional standards. Any key on the keyboard can be made to produce any character the user wishes on the screen. Atari Computers have an extra microprocessor onboard especially to enable these unique features. There are over 200 programmable colours and tones and a wide range of programmable sounds.

Plug a "BASIC" cartridge in and you have a comprehensive computer.

ATARI 400

£217.30

£249.90 INC. VAT

The model 400 has 16K of RAM and a touch sensitive keyboard. The 800 model has a professional style typewriter keyboard and a memory which is user expandable to 48K. Add disk drives (up to 4) and a printer and you have a system of adequate power for business uses.

NASCOM

SPECIAL EDITION! UNIQUE TO SPECTRUM

The Nascom is a British designed and built microcomputer and one of the first home micros to appear in this country, some five years ago.

Since then, it has been developed into one of the most powerful and expandable systems around.

It can have up to 206K onboard memory, combined with superb colour graphics, disk drives, printers and various input/output facilities can be added.

Such is the versatility of this micro that it has been adopted for numerous commercial applications including hotel booking systems, blood grouping, weaponry and satellite tracking.

Previously looked upon as a machine for the knowledgeable hobbyist only Spectrum now bring you the opportunity to embark upon this remarkable sphere of computing in the easiest possible way. A ready to plug in and use 'SPECIAL EDITION' Nascom programmable in machine code or BASIC is now available from us. If you are serious about computing the 'SPECIAL EDITION' is your starter pack. The initial machine provides 8K of memory but a simple plug in board upgrades your computer to 56K.

	EXC VAT	INC VAT
THE NASCOM 'SPECIAL EDITION'	£429.95	£494.44
'SPECIAL EDITION' 48K RAM BOARD	£130.00	£149.50

SHARP

The MZ80A is the newcomer to the Sharp range with the serious user very much in mind in the design.

A complete stand-alone 48K system incorporating a profiled typewriter keyboard with numeric pad and a 9" green display screen. The "BASIC" contains a number of very useful additions over the previous models.

A full line up of peripherals further add to the versatility of this machine.

INCLUDES £75 OF FREE SOFTWARE.

Hand held computers from Sharp give you a pocket genius at your command. We sell the well established PC1211 and the new 1500.

The PC1211 packs high performance functions with Basic language into a slim, compact body. You can extend your PC1211 with a cassette interface or printer/cassette interface.

The new PC 1500 takes technology close to personal computer ability. Its compact body has 16K bytes of ROM and 3.5K bytes of RAM. With an extended alpha basic numeric. You can then go further with the 4K or 8K RAM upgrades. There's also, for the first time in hand held computers, a four colour graphic printer or a combined printer and cassette interface.

PC1211 Computer	£65.00	£74.75

ZX 81 .. SPECTRUM .. B.B.C. MICRO .. ATOM .. VIC

New ZX81 Software from Sinclair.

A whole new range of software for the Sinclair ZX81 Personal Computer is now available – direct from Sinclair. Produced by ICL and Psion, these really excellent cassettes cover games, education, and business/household management.

Some of the more elaborate programs can only be run on a ZX81 augmented by the ZX 16K RAM pack. (The description of each cassette makes it clear what hardware is required.) The RAM pack provides 16-times more memory in one complete module, and simply plugs into the rear of a ZX81. And the price has just been dramatically reduced to only £29.95.

The Sinclair ZX Printer offer full alphanumerics and highly-sophisticated graphics. A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. So now you can print out your results for a permanent record. The ZX Printer plugs into the rear of your ZX81, and you can connect a RAM pack as well.

Games

Cassette G1: Super Programs 1 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Invasion from Jupiter. Skittles. Magic Square. Doodle. Kim. Liquid Capacity.

Description – Five games programs plus easy conversion between pints/gallons and litres.

Cassette G2: Super Programs 2 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Rings around Saturn. Secret Code. Mindboggling. Silhouette. Memory Test. Metric conversion.

Description – Five games plus easy conversion between inches/feet/yards and centimetres/metres.

Cassette G3: Super Programs 3 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Train Race. Challenge. Secret Message. Mind that Meteor. Character Doodle. Currency Conversion.

Description – Five games plus currency conversion at will – for example, dollars to pounds.

Cassette G4: Super Programs 4 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Down Under. Submarines. Doodling with Graphics. The Invisible Invader. Reaction. Petrol.

Description – Five games plus easy conversion between miles per gallon and European fuel consumption figures.

Cassette G5: Super Programs 5 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Martian Knock Out. Graffiti. Find the Mate. Labyrinth. Drop a Brick. Continental.

Description – Five games plus easy conversion between English and continental dress sizes.

Cassette G6: Super Programs 6 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Galactic Invasion. Journey into Danger. Create. Nine Hole Golf. Solitaire. Daylight Robbery.

Description – Six games making full use of the ZX81's moving graphics capability.

Cassette G7: Super Programs 7 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Racetrack. Chase. NIM. Tower of Hanoi. Docking the Spaceship. Golf.

Description – Six games including the fascinating Tower of Hanoi problem.

Cassette G8: Super Programs 8 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Star Trail (plus blank tape on side 2).

Description – Can you, as Captain Church of the UK spaceship Endeavour, rid the galaxy of the Klingon menace?

Cassette G9: Biorhythms (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – What are Biorhythms? Your Biohythms.

Description – When will you be at your peak (and trough) physically, emotionally, and intellectually?

Cassette G10: Backgammon (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £5.95.

Programs – Backgammon. Dice.

Description – A great program, using fast and efficient machine code, with graphics board, rolling dice, and doubling dice. The dice program can be used for any dice game.

Cassette G11: Chess (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Chess. Chess Clock.

Description – Fast, efficient machine code, a graphic display of the board and pieces, plus six levels of ability, combine to make this one of the best chess programs available. The Chess Clock program can be used at any time.

Cassette G12: Fantasy Games (Psion)

Hardware required – ZX81 (or ZX80 with 8K BASIC ROM) + 16K RAM.

Price – £4.75.

Programs – Perilous Swamp. Sorcerer's Island.

Description – Perilous Swamp: rescue a beautiful princess from the evil wizard. Sorcerer's Island: you're marooned. To escape, you'll probably need the help of the Grand Sorcerer.

Cassette G13: Space Raiders and Bomber (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £3.95.

Programs – Space Raiders. Bomber.

Description – Space Raiders is the ZX81 version of the popular pub game. Bomber: destroy a city before you hit a sky-scraper.

Cassette G14: Flight Simulation (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £5.95.

Program – Flight Simulation (plus blank tape on side 2).

Description – Simulates a highly manoeuvrable light aircraft with full controls, instrumentation, a view through the cockpit window, and navigational aids. Happy landings!

Education

Cassette E1: Fun to Learn series – English Literature 1 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Novelists. Authors.

Description – Who wrote 'Robinson Crusoe'? Which novelist do you associate with Father Brown?

Cassette E2: Fun to Learn series – English Literature 2 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Poets. Playwrights. Modern Authors.

Description – Who wrote 'Song of the Shirt'? Which playwright also played cricket for England?

Cassette E3: Fun to Learn series - Geography 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Towns in England and Wales. Countries and Capitals of Europe.
Description - The computer shows you a map and a list of towns. You locate the towns correctly. Or the computer challenges you to name a pinpointed location.

Cassette E4: Fun to Learn series - History 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Events in British History. British Monarchs.
Description - From 1066 to 1981, find out when important events occurred. Recognise monarchs in an identity parade.

Cassette E5: Fun to Learn series - Mathematics 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Addition/Subtraction. Multiplication/Division.
Description - Questions and answers on basic mathematics at different levels of difficulty.

Cassette E6: Fun to Learn series - Music 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Composers. Musicians.
Description - Which instrument does James Galway play? Who composed 'Peter Grimes'?

Cassette E7: Fun to Learn series - Inventions 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Inventions before 1850. Inventions since 1850.
Description - Who invented television? What was the 'dangerous Lucifer'?

Cassette E8: Fun to Learn series - Spelling 1 (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Series A1-A15. Series B1-B15.
Description - Listen to the word spoken on your tape recorder, then spell it out on your ZX81. 300 words in total suitable for 6-11 year olds.

Business/household

Cassette B1: The Collector's Pack (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £9.95.

Program - Collector's Pack, plus blank tape or side 2 for program/data storage.
Description - This comprehensive program should allow collectors (of stamps, coins etc.) to hold up to 400 records of up to 6 different items on one cassette. Keep your records up to date and sorted into order.

Cassette B2: The Club Record Controller (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £9.95.

Program - Club Record Controller plus blank tape on side 2 for program/data storage.
Description - Enables clubs to hold records of up to 100 members on one cassette. Allows for names, addresses, 'phone numbers plus five lots of additional information - eg type of membership.

Cassette B3: VU-CALC (Psion)

Hardware required - ZX81 + 16K RAM.
Price - £7.95.

Program - VU-CALC.

Description - Turns your ZX81 into an immensely powerful analysis chart. VU-CALC constructs, generates and calculates large tables for applications such as financial analysis, budget sheets, and projections. Complete with full instructions.

Cassette B4: VU-FILE (Psion)

Hardware required - ZX81 + 16K RAM.
Price - £7.95.

Programs - VU-FILE. Examples.

Description - A general-purpose information storage and retrieval program with emphasis on user-friendliness and visual display. Use it to catalogue your collection, maintain records or club memberships, keep track of your accounts, or as a telephone directory.

How to order

Simply use the FREEPOST order form below and either enclose a cheque or give us your credit card number. Credit card holders can order by phone - simply call Camberley (0276) 66104 or 21282 during office hours. Either way, please allow up to 28 days for delivery, and there's a 14-day money-back option, of course.

sinclair ZX81 SOFTWARE

Tim Hartnell's previous books have been warmly welcomed by the computer press:

"... This is undoubtedly the book to read ..." Personal Computer World
"... A book to be recommended ..." Computing Today

The book you've been waiting for!

This is a book that will allow you to make the most of the ZX Spectrum — a book that will lead to you 'expert programmer' status within weeks.

There are two major sections — the first for those who have no previous experience of computer programming, and the second containing advanced material for really powerful programming. All sections of the book make good use of the full eight colours, sound generation and high-resolution graphics. You're also shown how to make the most of Sinclair BASIC features such as DEF FN, SCREEN\$, MERGE and FLASH.

Key features of 'Programming Your ZX Spectrum'

- Using the colour effectively — BRIGHT, FLASH, INVERSE and more.
- Sound — there's more to the BEEP than meets the ear.
- Finding your way around the keyboard, the use of every keyword, command and function.
- High resolution graphics — how to use them for stunning displays, how to create your own version of the famous arcade game 'Pacman' with user-defined graphics.
- The ZX Spectrum has the full ASC11 character set and this book includes a word processor program to make best use of it.
- The Spectrum LOAD and SAVE is highly reliable, and the MERGE and VERIFY features increase its flexibility. Programming Your ZX Spectrum outlines simple ways to ensure you never lose a program.

234
PAGES!

The ZX Printer

All program listings are dumped direct from the ZX Spectrum, so all programs are guaranteed to run.

The Microdrive

An appendix to this book details the commands needed to use your ZX Spectrum with the Microdrive microfloppy so you'll be ready when it comes on the market.

100 FREE PROGRAMS FROM SILICA SHOP — WITH EVERY PURCHASE OF AN ATARI 400 800

ATARI PRICES REDUCED

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K	£199
ATARI 400 with 32K	£248
ATARI 800 with 16K	£449

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

THE FOLLOWING IS JUST A SMALL SELECTION FROM THE RANGE OF ITEMS AVAILABLE:

FOR FREE BROCHURES — TEL: 01-301 1111

For free brochures and reviews on our range of electronic products, please telephone 01-301 1111. To order by telephone, just quote your name, address, credit card number and order requirements and leave the rest to us. Post and packing is FREE OF CHARGE in the UK. Express 24 hour delivery available at an additional charge.

- **SHOP DEMONSTRATION FACILITIES** — we provide full facilities at our shop in Sidcup, Monday to Saturday 9am to 5.30pm (closing Thursday 5pm, Friday 5pm).
- **MAIL ORDER** — we are a specialist mail order company and are able to supply goods direct to your door.
- **MONEY BACK UNDERTAKING** — if you are totally unsatisfied with your purchase, you may return it to us within 15 days. On receipt of the goods in satisfactory condition we will give you a full refund.
- **PART EXCHANGE SECOND HAND MACHINES** — we offer a part exchange scheme to trade in many makes of T.V. (game for personal computers).
- **COMPETITIVE PRICES** — our prices, offers and service are very competitive. We are never knowingly undercut, and will normally match any lower price quoted by our competitors.
- **HELPFUL ADVICE** — available on the suitability of various computers.
- **AFTER SALES SERVICE** — available on all computers out of guarantee.
- **VAT** — all prices quoted above include VAT at 15%.
- **CREDIT FACILITIES** — we offer credit over 12, 24 or 36 months, please ask for details.

SILICA SHOP

FREE LITERATURE

I am interested in purchasing an Atari 400/800 computer and would like to receive copies of your brochures and test reports as well as your price list covering all of the available Hardware and Software:

Name

Address

.....

Postcode

YC 0982 — Your Computer — September 1982

Probably the fastest microcomputer
in the universe

the **JUPITER ACE** only £89.95.

All inclusive Price

For £89.95 you receive your Jupiter Ace, a mains adaptor, all the leads needed to connect to most cassette recorders and T.V.s (colour or black and white), a software catalogue and a manual.

The manual is a complete introduction to the world of personal computing and a course in FORTH programming on the Ace.

Even if you are a complete newcomer to computers, the manual will guide you step by step from first principles to confident programming.

The price includes postage packing and V.A.T.

Key Features

- Revolutionary microcomputer language FORTH.
- Full-size moving-key keyboard.
- User-defined high-resolution graphics.
- Programmable sound generator.
- Floating point arithmetic.
- Fast cassette interface.
- Upper and lower case ascii character set.
- 24 x 32 character flicker-free display.

The Jupiter Ace uses FORTH

The Ace is set apart from all other personal computers on the market by its use of a revolutionary language called 'FORTH'. Some computer languages are easy for humans to understand, others are easy for computers; FORTH is most unusual in being both. Its underlying principles are so simple that it takes even a newcomer to computers only a few minutes to learn how to do calculations on the Ace, yet the very same principles are powerful enough to allow you to invent your own extensions to the language itself.

At the same time, the memory-saving coded form used to store your programs inside the Ace allows it to obey them very fast — typically in less than a tenth of the time it would take to do the same thing using a different language. Amongst other things, this makes the Ace ideal for games.

FORTH's unique combination of speed, versatility and ease of programming has already made it a prime choice for professional applications as diverse as pub games and radio telescopes, and gained it an enthusiastic national user group. Now the Jupiter Ace can bring this addictive language into your own home.

Designed by Jupiter Cantab

Leading computer Designers Richard Altwasser and Steven Vickers have a reputation for pushing technology forwards. After playing the major role in creating the ZX Spectrum they formed Jupiter Cantab to develop their latest brainchild the Jupiter Ace.

Technical Specification

Hardware

Processor/Memory

Z80A running at 3.25 MHz.
8K bytes ROM 3K bytes RAM.

Input

40 moving-key keyboard with auto-repeat on every key.

Output

Memory-mapped 32 x 24 character display with high resolution user graphics. Output to drive normal UHF TV set on channel 36.

Sound

Provided by internal loudspeaker.

Cassette

Load Save & Verify at 1500 baud, separate data storage.

Software, FORTH

Data Structures

Integer, Floating point and String data may be held as constants, variables or arrays with multiple dimensions and mixed data types.

Control Structures

IF-THEN-ELSE, DO-LOOP, BEGIN-WHILE-REPEAT, BEGIN-UNTIL, all may be mixed and nested to any depth.

Operators

Mathematical +, -, X, ÷.
Logical AND, OR, NOT, XOR.
Comparison <, >, =.

Program Editing

FORTH words may be listed, edited and redefined. Comments are preserved when words are compiled.

Order Form

The **Jupiter Ace** is available only by mail order. Please allow up to 28 days for delivery.

Send cheque or postal order with the form to:—

JUPITER CANTAB, 22 FOXHOLLOW, BAR HILL, CAMBRIDGE CB3 8EP

Please send me:—

☐ JUPITER ACE MICROCOMPUTER(S) @ £89.95.

_____ F

SEA BATTLE

My program Sea Battle in the July issue contained a few mistakes. The amended lines should read as:

```
120 PRINT TAB(C-1,20)"<=>"
140 IF Z$="Z" THEN D=1
150 IF Z$="X" THEN D=2
154 IF C>37 THEN C=37
190 PRINT TAB(0,23)"BASES
LEFT="";F
212 IF B=20 THEN PRINT TAB
(A,B)" "
422 IF C$="Y" THEN GOTO 23
430 CLS:PRINT"MORE THAN 10
PLANES HAVE LANDED":
GOTO 410
```

Line 200 should be deleted. There should not be any space between Tab and the bracket as shown in the program.

Lakith Leelasena,
Ilford,
Essex.

ZX DEFECTS

Now that I have had my ZX Spectrum for two weeks I feel that I should point out some of its deficiencies.

First, to only be able to have line numbers in the range 0 to 9999 is a serious limitation on a 48K computer. Following the normal convention of line numbering in tens, this only allows 1,000 lines of code and, even using some multi-statement lines, this is not enough.

Secondly, to have to pull out the ear-phone plug each time a program is saved strikes me as a design fault. Thirdly, the keyboard layout would be improved by placing both the shift keys together at the bottom left of the keyboard. Also you can never be sure that the key you have hit has registered with the micro, and the red printing on the grey keys is well-nigh illegible.

M R Farley,
Maidenhead,
Berkshire.

COMPUTER FAIR

In April I went to the Computer Fair, A charming young lady accosted me there. "A message from Uncle Clive," she said And gave me a leaflet before she fled. "The Spectrum — what's that?" I thought with a smile, "Another leaflet to add to my pile." I read it more fully going home on the train, And shouted "My God! he's done it again." So I ordered a Spectrum by 'phone on the Sunday, "Perhaps it will come less than four weeks from Monday." The next week I sold my ZX-81 And sat back and waited for a Spectrum to come.

I waited and waited for several weeks more, And then a white card dropped through the door. "Your order is being processed for despatch." On May 26 — I suspected no catch. A 'phone call or two — and when I get through — "There's a further delay — and we're sorry too." Your Computer — July — on page 17, I read about Spectrum — but what does it mean! "Sinclair Research say the backlog is cleared." If that's so why hasn't my Spectrum appeared? I must be a "backlog" — I ordered so early, It's such a long time since I met Sinclair's girlie.

Oh what can I do now? — If I write in verse They won't want another so the delay can't get worse. I'll chance it — my recorder's all dusty, And what's more I think my Basic's gone rusty!

D J Shannon,
Bognor Regis,
Sussex.

ALIEN ATTACK

While there was no actual mistake in the hex listing for my program Alien Attack which appeared in the July edition of Software File, two bytes are unclear and I know that some people have had trouble as a result.

Location 16886 should read 9B, not 98. This affects the movement of the bullets — they turn into inverse division signs and stay off the bottom of the screen if this location is incorrect.

Location 16937 should read B4, not E4. This affects the working of the high score. Also, in listing 3, line 12 should read

```
IF A$="" THEN INPUT A$
```

Jon Jones,
Penylan,
Cardiff.

MACHINE CODE

I am pleased to see that a few more people have taken the plunge and are programming their ZX-81s in machine language — Your Computer July 1982. I believe their efforts have been well rewarded with better quality programs.

However, I believe that, as well as increasing the speed of the program, machine language should also occupy the smallest amount of memory possible and, in this context, I think that the program by D Clancy — page 91 of the July issue — could well be improved.

The following one-line program produces exactly the same screen border and only takes 28 bytes. It is

```
1 REM Y=EE RND LN RND =
)3 77 ? ; ? ( RAND 7 47 ? (
```

UNPLOT TAN

POKE 16529,119

POKE 16531,119

POKE 16538,119

RAND USR 16514

} direct commands.

also entered directly from the keyboard with no need for a hex loader.

The keywords are underlined and Rand/Unplot are entered by typing Then Rand/Then Unplot and rubout the word Then. Perhaps you would like to convert the statement back to machine-language mnemonics to see how it works.

S A Nicholls,
Keynsham,
Bristol.

FAST POKES

At long last my Spectrum has arrived, only 11 weeks after my order. Perhaps other lucky Spectrum owners would like to try the following Pokes, which are all concerned with the keyboard.

Poke 23561,5 — five × 1/50 second — shortens the delay before a key starts to repeat; Poke 23561,255 virtually turns off the repeat; and Poke 23562,1 makes the keys repeat much faster.

In the main Spectrum manual on page 138, it suggests Poking 255 into 23609 to make the keyboard beep, but I find this slows down the repeat too much. Instead, Poke 23609,50 which I feel gives the best compromise between speed and sound.

Stephen J Betts,
Eaton Bray,
Bedfordshire.

CLARIFICATION

With all due respect to Tim Hartnell, his reply to Martin Kuhn in the July's Response Frame is inaccurate: there is no need to put Save "Program Name" in the first line of the program. In fact there are at least two reasons for not putting it there.

First, you may wish to have one or more Rems containing machine code there. Secondly, if the program ends and you Run, the program will first try to Save.

The line, Save "Program Name" can be put anywhere provided the program jumps over it — for example, with a Goto during execution, but the simplest system is to put it at the end:

```
9997 STOP (not always needed)
9998 SAVE "PROGRAM NAME"
9999 RUN
```

Also, Line 9999 can be Goto (line

number) or List or List (Line number). The Goto is necessary if you have saved unlisted variables which will be lost if you Run.

List is sometimes necessary if you wish certain Rems to be read before running. You may need to Poke a particular value before running or to read other instructions. The automatic List prevents you from absent-mindedly running immediately after loading and is really a more useful facility than the automatic Run. Page 110 of the manual covers this method without the List possibility.

Les Simpson,
Hornchurch,
Essex.

STRONG LINE

Congratulations on your strong line July editorial calling on the computer industry to give mail-order consumers a fair deal.

The new Supply of Goods and Services Bill will help micro-computer enthusiasts for it is certain to become law by the end of this Parliamentary session. It makes consumer rights statutory.

That still leaves the problem of the mail-order company that goes to the wall taking its customers' money with it into liquidation.

We are campaigning strongly for the Customers' Prepayment (Protection) Bill, which recently failed in the Commons, to be reintroduced next session. Any support from readers would be most welcome.

Janet Upward,
Secretary, National Federation
of Consumer Groups,
18 Queen Anne's Gate,
London SW1 9AA.

VIDEO MEMORY

The eventual introduction of the Sinclair ZX Microdrive for the Spectrum computer will surely spell the end for expensive disc drives. However, I believe the future of mass-memory storage for computers will be on conventional video recorders. These have many of the advantages of magnetic disc drives, as well as high-volume sales hence low production costs.

What the market needs is a video recorder which provides for multi-track audio recording for hi-fi buffs, an on-line data bus for computers and a teletext decoder in addition to video recording.

The recorder could store teletext pages on the tape. The freeze-frame facility of a video recorder could provide for on-line storage or retrieval of information for computers in a similar way to how disc drives work. So virtual memory for computers would not only be massive but cheap.

R Marsden,
Wakefield,
West Yorkshire.

Kenneth Kendall and Acorn take on the Daleks from America

NEXT TIME you hear a computer talk it could sound more like a BBC newsreader than the American Dalek

Micros for primaries

WITHIN TWO years every primary school in the land should have a microcomputer. The Department of Industry will supply 50 percent of the purchase cost of a Sinclair Spectrum, BBC Micro or Research Machines 380Z from a £9m fund.

Whereas secondary schools were required to send two teachers on a "computer awareness" course, primary schools will instead receive a pack containing a self-study guide, a microcomputer reader and 20 sample programs on cassette.

Acornsoft has released the first few programs of what is promised to be an enormous range of educational software for the BBC Micro. The initial programs deal with science, mathematics and English language and cost £8.65 per cassette and £13.65 per disc. Acornsoft is at 4A Market Hill, Cambridge CB2 3NJ.

Wordcraft 20 is a Vic-20 version of a word-processor widely used on Pet computers. The system turns the Vic's screen into a window that can be scrolled up, down, left and right over the text. If a typed line is wider than the screen then the window will automatically follow it. The user can manipulate single characters, words, lines or entire blocks. Wordcraft 20, which includes 8K extra RAM, is supplied as a plug-in cartridge for £125 from Audiogenic, PO Box 88, Reading, Berkshire.

noises we are accustomed to hearing.

Most currently available speech chips were developed several years ago for the American market. Now Acorn has applied the latest technology to ex-newsreader Kenneth Kendall's voice and produced a BBC Micro that speaks BBC English.

According to one of Acorn's engineers this has two advantages: "First of all it is British English and secondly the quality is much better." Acorn will make the speech processor and a ROM containing useful words and numbers available in October for less than £30.

Later in the year they will produce a second ROM which will allow the BBC Micro to generate flowing phonetic speech which will sound remarkably like Kenneth Kendall.

Black and white £90 Jupiter Ace goes far faster with Forth

EX-SINCLAIR ENGINEERS Richard Altwasser and Stephen Vickers are launching a new high-resolution black and white computer for £89.95.

The Jupiter Ace will come with 3K RAM and be based around the 3MHz Z-80A. The real surprise though is that the new machine will not use Basic. "We feel that there are many drawbacks to Basic," says Altwasser, "which is why we are using Forth — the language of the future."

Altwasser claims that Forth is easy to learn yet executes far faster than

Basic and at the same time encourages a modular approach to programming. This may make the Jupiter Ace particularly appealing to schools, colleges and scientific establishments.

Unlike many recently released machines the Ace will not have colour but sound has been incorporated.

Although the keyboard lacks a full-size space bar Altwasser describes it as a "full-size moving key" and criticises some of his rivals for producing "keyboards that feel like dead flesh — ours will be more positive."

Pac-Men snap at Vicmen

ATARI'S LAWYERS are snapping at the heels of Bug-Byte's Vicmen. Now Vicmen, which is similar to Atari's Pac-Man, has been withdrawn from sale for fear of costly legal proceedings.

Atari knows the profits games like Space Invaders or Pac-Man can generate and are keen to prevent others profiting from their ideas. As more people learn to use computers it becomes more difficult to conceal the secrets of programs from prying eyes. Now Atari is resorting to legal action.

Tony Baden of Bug-Byte denies that Vicmen is a straight copy of Pac-Man but he is unwilling to commit limited resources to what might become a long and involved legal battle. "If we had unlimited funds we would like to fight it."

A 1,500-bit per second data-transfer rate should make loading programs from cassette quick and easy. Additional RAM and a printer interface will soon be available as well as a microfloppy drive.

Altwasser claims that the Jupiter can avoid the production delays which have plagued the microcomputer industry by choosing suppliers carefully: "We are not trying to make everything for three farthings." The Jupiter Ace is available by mail order only from Jupiter Cantab, 22 Foxhollow, Bar Hill, Cambridge CB3 8EP.

New Genie conjures up 16K colour and sound

THE ALREADY-CROWDED £200 personal computer market becomes even more cramped with Video Genie's launch of a £199 colour computer. Rob Stead, head of Lowe Computer Division, said "it's a totally new product," not just a colour version of the Genie II.

The Colour Genie, below, offers 16K RAM, a full-size typewriter keyboard, 16 colours, 160 by 96

graphics resolution and 128 programmable characters. Other features include 12K of Microsoft Basic, 40 by 24 characters screen format conforming to Prestel teletext standard, and 1,200 baud transfer rate for cassette. Among the accessories available are a position-detecting light-pen, a printer and, to be released shortly, a Modem facility.

Multitech has 64K micro up its sleeve

MULTITECH HAS joined the £200 computer battle by launching the Microprofessor MPF-II, shown above right, which is to be built in Taiwan.

Whereas six months ago the Vic-20 was the only machine offering colour and sound in this price range, the MPF-II will now have to take on the Colour Genie, the Dragon, the Spectrum, Atari 400 and Texas TI-99/4A.

The MPF-I was a hexadecimal code hobby computer, but the MPF-II is a fully-fledged personal computer. The ZX-81 sized box offers 64K RAM and six-colour high-resolution graphics with sound, based around a 6502 processor and

games, education and business software will be available on plug-in cartridges and cassettes. Data can be transferred from cassette at 1,000 bits per second.

The MPF-II will output to any printer with a Centronics interface, and Multitech's own thermal printer will print 40 characters per line at 50 lines per minute.

Other options include a full-sized typewriter keyboard to replace the MPF-II's pocket computer-style

keys, a calculator-sized remote controller and a speech synthesiser.

For an additional £100, Multitech has made available a Chinese-character processor which should be useful for translators not to mention Chinese restaurants and small businesses.

Sinclair worth waiting for

CLIVE SINCLAIR now admits that many customers have waited 12 weeks for their Spectrums rather than the 28 days still promised in Sinclair's advertising. He claims that production is now running smoothly at 5,000 units per week and that the backlog will be cleared by the end of September.

In the meantime those who have given up waiting for the Spectrum can take advantage of recent price cuts to buy a ZX-81 for £49.95 instead of £69.95.

Next year a Prestel adaptor will be made available for the Spectrum. Using the Spectrum as a Prestel terminal, owners will be able to access nearly 200,000 pages of information.

Sinclair will produce the adaptor at a price "well, well under £100". The company will set up a Prestel base of its own and others' programs. Looking further ahead, Sinclair hopes to set up user networks under the Prestel "umbrella", enabling Spectrum owners to talk to each other.

If teleshopping takes off in the way Sinclair anticipates it will, their company's involvement could prove to be a shot in the arm for the ailing Prestel network.

Dragon sounds off

IF YOUR DRAGON is a little hoarse or your Spectrum sounds off colour, Computer User Aids new sound-board may be of help.

Musical effects including bass, drums, chords and white noise can be generated on three channels, each with a range of seven octaves. The 1W amplifier can power a built-in speaker or a stereo output. Although the package includes software control for volume, tempo and envelope it does not require user RAM.

The unit costs £29.95 from Computer User Aids, 14 Carlton Road, Romford, Essex RM2 5BD. Telephone 64954.

Information Technology year, which was supposed to bring electronic mail to the people, has been forced to resort to postage stamps to broadcast its message. This is rather as if Caxton had resorted to writing advertisements by hand for his printing press. Those of you who have not made the transition to a paperless society will find that the stamps use more paper than ordinary commemoratives and that with the wonders of information technology it has become necessary to use three frames to display a message which any other stamp could display in one. The right-hand frame of the 26p stamp shows a high-technology supermarket charging someone £23.86 for a can of beans. Both stamps will be available on a specially designed first-day cover at most post offices from September 8.

ARCADE QUALITY SOFTWARE FROM LLAMASOFT!!

Spectrum ATARI

GRAPHICS/CHARACTER CREATOR

Now you can define your very own custom character sets. Or edit the existing sets. Results fully displayed on screen in modes 0, 1 and 2. Many exciting features including: Save, Screen Modes, Reflect, Invert etc.

Supplied on cassette with data £8.00

SPECTRUM SUPERDEFLEX

The idea of this new game is to bounce 'FRED' the space invader around the screen into the power pads. Keeping away, of course, from the devil which chases you around the screen. Steer with your deflex shields, but beware the mines or you may be buried alive. Superb graphics and fantastic sound on the 48K SPECTRUM only. £4.95 on cassette.

CITY BOMBER

A full feature version of the popular game 'BLITZ-KRIEG' supplied for the 16K or 48K SPECTRUM only. £2.95. COMING SOON — 48K ADVENTURE — QUEST FOR THE GOLDEN TORQ

Send Cheque/P.O. with order to:

LLAMASOFT SOFTWARE,

WANTED!

GOOD QUALITY SOFTWARE.
SEND DEMO FOR QUICK
REPLY.

TRADE ENQUIRIES WELCOME
PLEASE ADD 50P P&P

BREAKOUT/ DEFLEX

Unexpanded package a full feature version of the popular arcade Breakout plus a new concept in computer games, Deflex!! Both programs on one cassette only £3.95.

DEFENDA! m/c

Full feature version of the popular arcade game including; Swarms, Baiters, Pods, Landers and Humanoids. Controls: Up, Down, Thrust, Reverse, Fire and Smart Bomb. High resolution colour graphics. Joystick controls. 8k or 16k expansion needed. Only £10.00

TRAXX! m/c

Vic 20 version of the brand new arcade game "Amidar" A Packman/Quix crossbreed. All machine code, fast and fun. Joystick controls. Hi-res colour graphics. 8k or 16k expansion needed. Only £10.00

RATMAN! m/c

Kill the squeaking rats which fall from the sky before they dig in and prey on you! Game includes rats, hammers, men, mutants and spears. M/c, hi-res colour graphics. 8k or 16k expansion needed. Fast and fun for only £8.95

BLITZKRIEG (3.5k)

Fly your Vulcan bomber over enemy territory and destroy the city. 25 levels of play. Hi-res colour graphics on the unexpanded Vic 20. Only £4.95

UTILITY PROGRAMS (for unexpanded Vic 20)

GAME GRAPHICS EDITOR. Create your very own custom characters. Full features include Reflect, Save on Tape etc.
SOFTKEY 24.24 key words inc. Peek, Poke, List, Save on your function keys Both programs supplied on one cassette. Only £6.00
Coming Soon, plug-in games cartridges at under £20 — please ring for details.

ZX 81 Spectrum

ABACUS CONTROLLER

Developed to eliminate tedious swapping of plugs when LOADING or SAVING programs on cassette.

ZX SPECTRUM CONTROLLER: Single switch selection of SAVE, LOAD & AMP modes. Built in amplifier and loud-speaker boosts Spectrum sound output. Price £14.95

ZX81 CONTROLLER: Single switch selection of TALK, SAVE, CUE & LOAD modes. Built in microphone/speaker for fast and reliable program naming and cueing. Price £12.00

All items in this advertisement can be viewed before buying at the Buffer Micro Shop, London.

ZX Spectrum games

1. ANDROID PIT RESCUE: Rescue the trapped miners before they are trapped in the flooding mines.
2. ICEBERG: Steer your icebreaker through thickening pack-ice to pick up survivors.
3. DESTROYER: Find and destroy the submarines before they sink the merchant ships. Novel use of sound.
4. BATTLE: Destroy missile sites while avoiding mines and the enemy tanks that are out to get you.

All Spectrum games have User Defined Graphics, sound, full colour and highscore.

ZX81 games

5. DEFENDER: A fast action machine code game with five levels of play, on screen scoring and highscore.
6. AVENGER: Destroy targets on the planet's surface with bombs and lasers while fending off guided missiles. Machine code, five levels of play, time and highscore.

Games 1 & 2 on one cassette price £5.95

All other games price £4.95 each including P&P.

All games are in stock and we guarantee to despatch them within seven days.

COMPUTER CLUB

Computer Club is here to encourage you to start your own local computer club or, if one already exists, to join it and become involved. We would like to hear of anything which has made your club a success, or of any projects or programs you are developing.

PASS THROUGH the saloon bar of the Fox and Goose, cross the beer garden and you will find the West London Computer Club occupying a room at the back of the pub. Founded almost three years ago, the club recently moved to the Fox and Goose, near Hanger Lane, from Willesden Technical College. The landlord initially billeted them in a smaller room but was sufficiently impressed by their beer consumption to offer them their present spacious accommodation.

As at least half the club's 30 paid-up members are professionally involved in computing, there is a good deal of technical expertise on hand. *Your Computer's* representative soon received advice on how to cure the

WEST LONDON

Simon Beesley discovers the ins and outs of gas detection and synthesised speech in the convivial atmosphere of the West London Computer Club.

irritating loudspeaker buzz on his BBC model A and on how to make the screen display steadier. Four BBC Micros were available at the meeting and other machines owned include Nascoms, ZX-81s, a Pet, a Tuscan and a Vic-20.

You do not have to be an expert, or even own a machine, to enjoy the meetings. Neil Cryer, club chairman and co-author with Pat Cryer of a book on programming the BBC computer, pointed out how mistaken it is for people to think they should wait until they buy a computer before joining a club: computer clubs are ideal places to get advice on possible machines.

The August meeting showed the amount of cross-fertilisation that goes on between London clubs. Bazyle Butcher, who had previously given a talk on building a robot arm for £12, attended from the Harrow CC, and David Annal from the Croydon CC gave a talk that evening on "The Ins and Outs of Interfacing".

The talk mixed technical information on interface chips with a variety of practical demonstrations. Using three monitors linked up to a Pet, he showed how to input information to the computer from a torch via a light-detecting cell, a light-pen, a microphone and a device which detected gas and interrupted a program with an alert. Among the output possibilities demonstrated was an impressive example of synthesised speech, using a "phoneme speech" chip.

The chip can interface with a computer and an amplifier to produce 36 different vowel sounds, 25 consonants, three types of pause and four inflections. These can be combined to synthesise almost any spoken word. Inflections — a voice's rise and fall — make the

difference between monotonous "robotic" speech and a more human-sounding voice.

In a virtuoso programming application, David Annal's speech generating program recited the verses of his poem, Sam, which relates the misadventures of a young lad, Sam, in rhyming couplets. In time with the recital, the program displayed some high quality graphics on the monitor illustrating episodes from the poem and printed the verses at the top.

The club arranges a talk by a member or guest for most meetings. In September, Graham Brain — one of the founder members with Bernie Haylett — will talk about the Pluto colourboard, and in October there will be a talk on CP/M. Meetings take place on the first Tuesday of every month at the Fox and Goose, Ealing Road, West London. For further details telephone Neil Cryer, 01-997 9437, or Bernie Haylett, 01-883 3948.

Local news

Bristol

BRISTOL Computing Club is offering a course in Basic programming from September 15. The club meets on the third Wednesday of every month at the University of Bristol Physics Building. More details from the club secretary on 0454-322071.

Cheshire

MEETINGS of the Mid-Cheshire Computer Club are held at the main Winsford Library on the second Friday of each month. They usually include a machine demonstration in the proceedings. Telephone Dave Clare on 06065-51374 for more details.

Newcastle

NEWCASTLE Personal Computer Society has been running since 1978. They are linked with several user sub-groups. Meetings take place on the first Tuesday of the month at Room D103, Ellison Building, Newcastle Polytechnic. You can telephone John Bone on 0632-770036 in the evening.

BREAKING THE SC B

Once upon a time computers that could talk and listen were only found in 2001. Now Tim Langdell looks at devices that could make your ZX-81 come alive — from the humble keyboard bleep to mighty units that can recognise and synthesise speech.

PERHAPS THE most frequent criticism made of the ZX-81 is its unresponsive keyboard. Except for the eagle-eyed, it can be very difficult to be sure that the key pressed has been accepted by your '81. This can be especially frustrating when you are entering large amounts of data or machine code. A keyboard beeper can be a Godsend in situations like this, and the two I tested are the Keyboard Audio Tone from TV Services of Cambridge, and the Fulcrum Electronics Bleep.

Fulcrum's Bleep is the simpler of the two devices and once fitted, pressing almost any key on your ZX-81 will cause a beep. The board is extremely easy to attach and requires no soldering. Ingeniously, Fulcrum has used small, spring-loaded pins on the ends of the leads to be attached to the ZX-81's circuit board.

Keyboard response

There are clear instructions to explain into which holes in the circuit board the pins are to be pushed. They explain in detail how to open your ZX-81 and how to reassemble it safely. The Bleep's board and piezo-buzzer fit neatly inside the ZX-81's and can be held in place with sticky tabs.

From the 210 characters and keywords possible on the ZX-81, the Bleep will give a noise when any of 198 of them are pressed. The key presses which will not produce a beep are such keys as Edit, Rubout, Newline, Function and Space.

As Fulcrum points out, the fact that there is no beep when these keys are pressed can be useful in drawing your attention to the action you are taking. If only someone could devise a way of giving extra warning when New is pressed.

I have just three minor criticisms of the Bleep. First, because attaching it involves taking one of the ZX-81's fragile keyboard ribbon cables out of its socket and putting it in Fulcrum's one, you will need to be extra careful not to crease the cable. A small break in the ribbon cable can give rise to rather annoying and intermittent problems — keys suddenly fail to work.

Secondly I found the beep sound rather tiresome after a while. It would have been useful to be able to switch off the Bleep when not required. This extra facility would be particularly useful to owners of ZX-81s with larger keyboards fitted where the beep would not always be needed.

Lastly, it would be unwise to assume that if you heard a beep with this board that your ZX-81 has definitely noted your keypress. ZX-81s are relatively slow machines and even with the poor standard keyboard it is not difficult to out-type them.

The Keyboard Audio Tone is a little more sophisticated in that it not only gives a beep when any key is pressed — and all keys give a beep — but it also gives a different toned beep when the ZX-81 is ready for the next piece of information.

Fitting this device does, however, require some soldering. Five wires must be carefully soldered to the ZX-81's printed-circuit board and very clear instructions are given on how to do this.

As with the Bleep, the Audio Tone is fitted neatly inside the ZX-81's case with sticky tabs. In use it makes working with your ZX-81 more like talking to R2D2. Every key press gives a low tone, and you hear a high tone as soon as the ZX-81 has executed the command. This can be particularly useful when working in the Slow mode. If you grow accustomed to listening to the two tones you will never out-type your '81.

Choice of loudness

This device also gives rather useful feedback when loading programs. At the end of a Load the beep sounds to indicate that the ZX-81 is ready for the next command. Also, the high

ZX-81 SOUND CARRIER

Right and cover: Fulcrum's ZX-81 bleep and William Stuart's sound synthesiser. Below: Big Ears speech recogniser, Quicksilver sound board, Zon synthesiser and Wideband Speakeasy.

and low tones can be heard occasionally during Loading, which means that you can busy yourself with something else during a long Load and need only listen for the final beep.

The Audio Tone gives you a choice of volume levels, too. You can make the tones louder by changing the position of a wire link on its printed-circuit board. In fact, it would be possible to attach a two-way switch with a centre off position so that you have the choice of loud or quiet tones or no beep at all.

Finally, a very useful feature of this device is that you can introduce a beep into a program by simply putting a Pause of greater than about four. This could provide a simple way of introducing sound to your games programs.

Comparing the two keyboard beepers is not easy. Both do their job well and would be a cheap but extremely useful addition to a ZX-81. My own preference was for the Audio Tone because it offered more facilities at no extra cost — they are both £8.95.

Sound synthesiser boards are also available for the ZX-81, and for around £20 you can add laser sounds to your space invader games, or play your ZX-81 like an organ. There are three sound synthesisers on the market at present: the Quicksilver sound board, Stuart Systems Sound Synthesiser, and Zon-81 from Bi-Pak.

The Bi-Pak uses the versatile AY-3-8192 chip whereas the other two devices use the very similar AY-3-8190 sound synthesiser. Hence all three devices offer very similar facilities. The two AY-3-8190-based ones also offer two eight-bit ports as well as the sound synthesis, whereas the Bi-Pak synthesiser offers only sound.

Creating specific sounds

A further major difference is that the Bi-Pak and Stuart Systems boards are not memory-mapped in RAM space: they are in the I/O area of the Z-80A's memory, whereas the Quicksilver board is mapped at the top end of the 16K RAM area.

Finally, the boards differ in that the Quicksilver and Stuart Systems boards must be attached to an amplifier whereas the Zon-81 is a fully self-contained unit with amplifier and speaker.

A disadvantage with all three devices is that it is not obvious how one is to obtain a specific sound. A relatively simple gunshot sound, for instance, can take up to 20 lines of program. Forewarned, however, that you may have to devote some time to creating a new noise, these boards can produce an amazing variety of sounds, from steam trains and laser shots to music in three voices in imitation of almost any musical instrument. The three sound synthesisers are supplied with differing amounts of information, which in each case is inadequate.

The Stuart Systems synthesiser is available as a kit as well as ready-made. The instructions on building the kit were very clear and if you have had some experience of building electronic circuits you should find building this device relatively easy.

Because the synthesiser is in the Z-80's I/O area and not memory-mapped in the RAM area it cannot be addressed from Basic with Peek and Poke commands. Instead, a machine-code routine has to be used.

Stuart Systems gives clear instructions as to how to load the routine which is about 100 bytes long and held in a Rem statement. You would need to enter this machine code only once and then save it on cassette for the next time.

Stuart Systems gives an overview of how the AY-3-8190 chip works. This will probably take you a few readings to understand fully,

SURVEY

but it is, however, reasonably clearly written.

The booklet with the synthesiser covers how to select the various registers in the chip with which you can choose what type of sound will be produced. The several examples given help you understand how the device works, but it

would have been better were there more specific examples of how to obtain sounds you might typically use in games. The only real example of this kind produces a slow steam-train sound.

At the end of the booklet Stuart gives some ideas as to how the output port might be used. Several hardware ideas are offered and information as to the maximum loads which can be applied.

Stuart Systems also offers a Music Composer program on cassette for an extra £6.90. This allows you to easily enter tunes with up to three-part harmony, and allows easy setting of volume, pitch, and decay of each note. The cassette is complete with two demonstration tunes. If you are interested in composing tunes then this cassette could be good value, but you must have a 16K RAM to run the program.

To hear the sounds you create you have to attach your Stuart Systems board to an amplifier. This aspect of the synthesiser is poorly documented, and if you were to read the booklet too quickly you might be forgiven for thinking that the sound comes from your TV's speaker, which it does not.

Speaker systems

Stuart Systems suggest in a diagram that you attach one of the three outputs to one channel of a stereo amplifier, and another to the other channel. However, there is no reason although Stuart Systems omits to say so, why you should not attach all three outputs to a mono-amplifier.

The Stuart Systems board is well made and has a duplicate connector at the back so that a 16K RAM pack or another add-on can be fitted at the same time.

The Quicksilver sound board is similar in many ways to Stuart Systems device. One major difference, though, is that the Quicksilver

(continued from page 23)

board must be used along with Quicksilver's motherboard or one of similar specifications. The only alternative is to use two edge connectors soldered back-to-back, which Quicksilver also supply. Whichever of these two methods you choose, you will have to pay extra on top of the price of the sound board.

As with the Stuart Systems board, Quicksilver does not make it clear that you have to connect the board to an amplifier, or that this connection is made via a 3.5mm. socket at the top of the board. However, the documentation shows that you can alter the output volume of the board to match your amplifier by turning a small potentiometer adjacent to the socket. Unlike the Stuart board, then, the Quicksilver one is designed to work with a mono-amplifier.

The Quicksilver board's sheet of information gives a brief idea of how the 13 registers in the AY-3-8910 work to produce various sounds. Addressing each of the three music channels is covered as well as how to address the noise channel and create envelopes.

Music programs

Unlike the other two sound synthesisers, this board simply requires you to poke two locations — 32767 and 32766 — to produce sounds and control the chip. A useful table is provided which enables you to create accurate scales over a five-octave range.

Quicksilver provides a few more example programs than Stuart Systems, and these include a program to play a simple tune, and a phasor-effect sound. The phasor sound is reasonable, but I am sure with perseverance you can produce a sound more like an arcade game's.

Quicksilver gives very little information on connecting hardware to the two user ports other than to say they can be connected up via the on-board 16-pin DIL socket.

The third sound synthesiser is from Bi-Pak. It is supplied in its own black plastic box, with integral speaker, amplifier and volume control. As such, it is much less fuss to set up than either of the other two boards. The booklet provided with it was also more comprehensive and, on the whole, well written.

Apart from summary tables indicating what each register does and a visual idea of the envelope shapes, which both the other board's information included, this booklet was the most informative and easy to read of them all. It gives clear instructions on how to enter the nine-byte machine-code routine which is needed to run this non-memory-mapped device. The Stuart Systems board routine needed 100 bytes.

The booklet's approach is a hands-on discovery of the AY-3-8912 chip's functions, which are identical to those of the AY-3-8910. It is not perfect — you still have to work hard to create any given sound — but it is well written. The booklet contains example programs, all of which are useful. However, the phasor sound Bi-Pak suggests is too much like a simple gun shot.

There is a program to allow you to use the keyboard of your ZX-81 as an electronic organ. An assembly language version of the machine-code routine is included — which Stuart Systems omits — as well as an idea of

how the chip does its job. The unit does not include a user port like the other two boards, but many of you may feel that this is not an essential feature anyway.

The Zon X-81 also has a rear edge connector which duplicates the one on the rear of the ZX-81 and thus allows you to have a RAM pack fitted at the same time.

If you want a sound synthesiser and an I/O port then you may well be advised to choose either the Stuart Systems or the Quicksilver board. This should be slightly less expensive than buying a separate I/O port as well.

However, both of these boards presented the problem of needing to be connected to an external amplifier which may not always be easy — my own stereo system is not usually within reach of my ZX-81, and vice versa. The Bi-Pak was easier to use for this reason, and had the clearest guide to using the sound synthesis chip.

Top: Wideband Votrax-based speech synthesiser. Above: Zon-81.

As far as price is concerned, the Stuart Systems board is the cheapest at only £19.50 plus VAT in kit form, and £25.50 plus VAT ready-made. The Quicksilver board is £26, but remember that you will either also need a QS connector at £4 or a motherboard at £12. Finally the Bi-Pak Zon X-81 is £25.95 including VAT. This means of course, that it is the cheapest of the three in ready-built form, even though it is supplied boxed and with its own amplifier and speaker.

Art of conversation

You can also make your ZX-81 speak to you. There are two main types of device on the market which can achieve this. One type uses the Digitalker technique which has a vocabulary in digitised form stored on ROM. The

Digitalker device on the market at present for the ZX-81 is the Speech Pack from DCP. This device is mapped in RAM at locations 49149, if you have just the ROM supplied with the Speech-Pack, and 49148 if you buy further ROMs.

Using the Speech-Pack is very easy and only requires Poking the location in question with a code number given to the word you wish played. A full table of words and their codes is given. There are four ROM word-packs available, but only the first is supplied with the Speech-Pack. This first ROM contains 72 words, giving all numbers from 1 to 19, the tens from 20 to 90, 100, 1000 and 1,000,000.

Phenomenal phonemes

The letters of the alphabet are also on this ROM — Z is pronounced "zee" — as well as a few words of dubious use such as ampere, case and cent. Clearly, it is an American chip. Rather more useful are the two tones of different pitches which can be sounded during a program as part of a game or whatever. As it stands this first ROM does not appear very useful, and further ROMs cost about £15 each.

The unit is very easy to use, and the words are clear. It is boxed and contains an internal speaker/amplifier. The ZX-81's rear connector is duplicated at the rear of the unit, and facilities to alter the volume of the speech or attach an external speaker are available.

DCP has also just released a Spectrum adaptor which allows the unit to work on a Spectrum using the In/Out commands. DCP has mapped the unit in the Spectrum's I/O

area, and so it does not interfere with memory.

However, be warned that the Spectrum's rear connector is not duplicated at the rear of the unit. Any other add-ons, such as the printer, must come between the Spectrum and the Speech-Pack.

The main alternatives to the DCP Speech-Pack are the Votrax-based devices which actually synthesise speech. This chip, which is also American, does not have words stored in ROM like the Digitalker, but instead is capable of producing all the phonemes present in speech. Words are thus built up by continuing several of these phonemes. You can think of the phonemes as being small sound units such as the "-er" at the end of "butter" or the "doh" at the start of "dog".

(continued on next page)

(continued from previous page)

There are several such devices on the market: the Wideband, the Voxbox from Mutek at £65, and the Namal Supertalker 1 at £49.95 plus VAT from Namal Associates. The Wideband and the Voxbox are very similar.

The Wideband is encased in a bookshelf speaker box, and has its own amplifier, speaker and power supply. The Wideband is connected to your ZX-81 via a cable and a parallel port. Any parallel port for the ZX-81 should work, but you do need to buy one.

While the Wideband manual is long and generally well written, it does not help you very much with regards attaching the unit to a ZX-81. There is just one page devoted to this which uses the DCP I/O port as an example, but no explicit directions are given.

In fact you need to connect up data lines 0 to 7 on your parallel port to the pins on the Wideband's connector as indicated in the manual. But only the Strobe signal should go to the D7 line. The other D7 they mention for a Busy should be attached to D7 of an input port. It is easy to get this confused from Wideband's literature.

The Votrax chip needs to receive a Strobe signal telling it that message is now on the data lines, much as a printer does. Wideband tells you to use D7 for this and to include Pokes to D7 — by Poking the port location with 128 — to simulate a Strobe signal. While the Votrax chip is producing the sounds, it sends a Busy or low signal to the D7 line of your input port which needs to be tested by a line in your program. Only when this line goes high again, should you try to make the Wideband produce another phoneme.

Once you have grasped these simple rules, programming the Wideband is relatively simple. The Wideband has a long word list with suggested phoneme combinations for each word. The watchword though is to experiment for yourself — you can even produce regional accents.

However, unless you are a linguist programming your own words will take a good deal of time and thought. Wideband offers a phonetic-input program which I would strongly recommend anyone buying the unit should obtain. This program is designed to allow you to enter words more in the form that they are spelt and it decides which are the appropriate phonemes.

The main problem is that the voice is all one pitch, and so sounds rather like a Dalek from *Dr Who*. In general the sound quality is poorer than with the Digitalker system, but there are no limits to the number of words you can produce. This unit can be fun to use and could easily provide an interesting added dimension to games.

The unit has both a volume control and a pitch control to alter the sound from a deep man's voice to a high-pitched man's voice — curiously, it never sounds like a woman's. This pitch control is rather difficult to access and any adjustment involves you in sticking a screwdriver through a hole in the rear of the unit.

A final criticism must be the rather annoying hum that the unit produces. The Voxbox, which has an external knob to change the pitch, hums less. Perhaps Wideband could improve this aspect by changing the smoothing

Above: Big Ears speech recognition system.

capacitors. By the way, do not be surprised if you order a Wideband, or a Voxbox, and receive a cable with it marked "Pet". Wideband does not make up cables for ZX-81s because there are so many different I/O ports available for the machines.

Comparing these two rather different methods of allowing your ZX-81 to talk seems rather unfair as they rely on such different principles. However, a fully expanded DCP Speech-Pack will cost around £95 — the basic unit with one ROM is £49.95. On the other hand the Wideband is complete at £69 plus VAT. You do need a parallel port for it, though, which would typically cost you a further £15 or so. The Voxbox sells for around £65. On the whole the Votrax-based units seem better value for money, but the Digitalker has clearer speech and its

Keyboard beepers

- **Keyboard Audio Tone**, TV Services of Cambridge Ltd., Chesterton Mill, French's Road, Cambridge CB4 3NP. £8.95.

- **Voxbox**, Mutek, Quarry Hill, Box, Wilts. £65 including demonstration software.
- **Namal Supertalker 1**, Namal Associates, 25 Gwydir Street, Cambridge. Tel: 0223 355404.

Speech recognition

- **Big Ears**, William Stuart Systems Ltd, Dower House, 7 Billericay Road, Herongate, Brentwood, Essex. £49 plus VAT.

vocabulary can be sufficient for many purposes.

The final device in this survey is a Speech Recognition system from William Stuart Systems. This is also known by the unfortunate name Big Ears. This is a very sophisticated piece of equipment allowing your ZX-81 to respond to your spoken commands. The Speech Recognition System (SRS) is housed in its own well-made metal cabinet with plug sockets for a microphone and a connector to attach the unit to an I/O port. You can use any parallel port, but you will need one to be able to use the SRS.

A good-quality microphone is supplied with the unit, as is a cable for connection to the sound board. The connections are simple to make, and there are copious notes. Stuart Systems provides a theoretical article on the subject, written for other machines, but intelligible to ZX-81 owners too.

The SRS is very fussy about setting up and use. You must set up in a quiet room, and talk in a loud voice about a foot away from the microphone. The quality of your voice also has to be consistent or else the SRS will not recognise you. Stuart Systems now supplies a program on cassette which makes setting up the SRS very simple. Whether you use this tape or the other method involving the lengthy program included in the SRS's instructions, you will have to speak each word into the system several times while it learns your voice pattern.

This device certainly works and can be fascinating to experiment with. But it is rather sensitive to changes in your voice, room noise, and so forth. For such reasons, and the fact that it is particular about the way you speak, it is difficult to see this unit being in everyday use with ZX computers. Uses it would be ideal for — such as being able to say "fire" in a space invader-type game — are not really suitable for this unit as it stands.

All in all, if you are interested in speech recognition then you will be delighted with this unit. But if you want a simple futuristic device to enable you to talk to your ZX computer rather than type in words, then I think you will have a little while to wait yet for such a piece of cheap electronics. The Stuart Systems Speech Recognition System costs £49 plus VAT.

HARDWARE SPECIFICATION

- ★ 6809E Microprocessor, a great advance on the original 6502 — still used by PET, Apple, Atom, Atari 400, BBC Micro, VIC 20.
- ★ 32K RAM memory as standard — At least twice as powerful as other computers — at the same price, expandable to 64K.
- ★ 26K user available after 4 pages of high resolution graphics.
- ★ DRAGON 32, unlike most units, gives EXTENDED MICROSOFT COLOUR BASIC as standard.
- Microsoft basic has become the industry standard (e.g. IBM, Apple, Commodore, Tandy, Atari).
- THIS HAS:—
- Advanced graphics features — set, line, draw, circle, paint, print using.
- Advanced sound feature.
- Automatic control of cassette recorder.
- Full editing features — insert, delete, change.
- ★ DISPLAY:—
- 9 Colours.
- 5 Different resolutions from 512 points of text (16x32) to 49152 points (256x192) at high resolution.
- Home UHF TV set and/or colour monitor.
- ★ KEYBOARD:—
- Professional quality keyboard to the standard on data entry terminals.
- Typewriter layout and feel.
- Guaranteed for 20 million key depressions.
- ★ SIMPLE PLUG-IN CONNECTION FOR:—
- Joystick controllers.
- Audio cassette recorder (inc. Stop/Start).
- Printer (Centronics parallel).
- Games cartridges.
- ★ 160 page "BASIC" training manual — FREE.

SOFTWARE AVAILABLE NOW!

CARTRIDGES

- Ghost Attack* — A Pacman type game for one or two players, fifteen skill levels.
- Berserk* — A challenging shooting game for one or two players.
- Cosmic Invaders* — The infamous game on your own set — 15 levels, 1/2 players.
- Meteoroids* — Pick your way through the treacherous asteroid belt.

CASSETTES

- Compendium of Games* — A broad range of games to illustrate the abilities of Dragon 32.
- Compendium of Applications* — A selection of routines to get the most from your Dragon.
- Quest* — An adventure game — defeat the dreaded morlock.
- Madness and the Minotaur* — An adult strategy game in real time.
- Computavoice* — Allow you to instruct Dragon 32 how to speak using phoenetic sounds.
- Graphic Animator* — Create simple animated colour cartoons on the screen.

SURVEY

SPECTRUM SOFTWARE

Boris Allan examines the first software offerings designed specially for your Spectrum.

ALTHOUGH THE SPECTRUM was announced in April the machine has only become available in large numbers recently. For software suppliers it is still early days. We were therefore relieved to find that most of the programs we received worked first time and reasonably well even if some of them lacked originality.

Most of the software we sampled was based on ZX-81 or arcade games but we also tried out some educational and utility programs. Loading the Spectrum was far less frustrating than the ZX-81. The machine performed well, producing particularly good colours but dis-

is bound to be subjective. To give as objective an assessment as possible we tried out the games on all age groups — even a class of five-year olds.

Both Bug-Byte's Spectral Invaders and Quicksilver's Space Invaders approach the standard of real arcade games. Spectral Invaders is almost an exact copy of Space Invaders, complete with four different colours for invaders, a flying saucer and high score. Some effects are slightly slower than the Atari original but the graphics quality and the use of colour and sound is excellent. Quicksilver's Space Intruders also had a mutant invader that wobbled and was worth extra points and a hold facility to allow you to stop the game at any point.

While the invader programs were written in machine code, Alien Command was written in

Above: Chromasoft's Bomber. Right: Bug-Byte's Spectral Invaders.

appointing sound. The limitations of the internal speaker can at least be bypassed by taking the cassette out of the recorder, connecting the two Mic sockets and switching on the recorder. Tone and volume can then be controlled with the recorder's own controls.

Games programs are strange things. Long complex programs can be much less enjoyable than a short snappy one incorporating a good idea. So long as the programs are relatively bug-free, as most of these Spectrum games were, then evaluation of any particular cassette

Basic and was too slow and crude for a space game. Winged Avengers from Work Force is a Galaxian-type game in which waves of attackers move down the screen towards the player's missile firer, break formation, circle about and then attack again. Six speeds are offered and the action is fast. But with the exception of a formation of birds, which appear in the second attack phase flapping their wings very effectively, the display is a little dull.

Chromasoft's three programs varied from

the sublime to the ridiculous. Worm is a simple but clever idea. A worm on the screen has four segments, and the player has to direct the worm around the screen, eating up numbers. Each time a number is eaten, they flash up randomly, the length of the worm increases by that amount. As the worm gets longer, it becomes more difficult to navigate, because you are not allowed to leave the screen or to cross over yourself. One player reached about 125 segments, and could not find any space.

The program is as simple as the display but the idea worked. Defined colours and graphics for the segments would be improvements but only cosmetic. Bomber is an uninspired rendering of Blitz. Golf is not only unexciting but bug-ridden. Amongst other things the game was unwilling to play the right number of holes.

AVC's Fortune could be a useful stand-in for the crystal ball at children's parties. The company's Tables has a more educational objective. The tests of multiplication tables are quite competent but the program would be more useful as a means of generating interest and enthusiasm for mathematics rather than for teaching the tables themselves.

Whoever designed it has a keen appreciation of the minds of primary school children, although AVC is stretching a point when it claims the program can be used to the age of 16. One clever ploy to generate interest was the use of the ZX-Printer to give each child a permanent record of its achievement. One kid described it as "space-age paper". This theme is reinforced by a countdown to the launch of a rocket each time you play.

Time Bandits from Newsoft comprises six separate games on side 1 all combined in an

Phantasmagraphics

Adventure-style game on side 2. Most of the games have pretty graphics but are rather elementary. Minotaur's Labyrinth is a matter of collecting objects in a maze and Napoleon's army is similar — but without the maze. In Titanic you rely on luck to avoid being sunk by an iceberg while Tower of London is at least distinguished by the appearance of random Beefeaters. Combination is just a matter of remembering a number but Castle of Evil is a little more out of the ordinary.

(continued on next page)

(continued from previous page)

You have to work out the best strategy to cross a web with hostiles converging on you — rather like the Adventure game which used to be shown on BBC 2. Most of the games had not been carefully thought out. It was sometimes possible for instance to offer bribes of minus amounts of money, and thus become richer.

Backgammon from Keith Archer worked well enough but was easy to beat and again vulnerable to cheating. There was nothing to prevent you putting more than five counters on a point for instance.

Richard Altwasser's Cambridge Colour Collection costs £9.90 for a book of 64 pages and a cassette. Though some of the programs are original, in that they use specific features of the Spectrum, many are not: Maze is marred by a poor algorithm. There is also Breakout, Nim, and most others, including a version of King called Kingdom. The cassette was unfortunately unloadable — the company has had to replace many of the cassettes.

We reviewed two graphics packages. Phantasmagraphics plots 2D and 3D patterns and allows you to modify the patterns by entering height, width, perspective and distortion variables. The program is written in Basic and takes up to six minutes to draw a shape. The program contains a bug which causes it to be interrupted by an "integer out of range" error message for large height and width values.

Superdraw 16 is an exceptional program. For £5 you are supplied with an instruction booklet, a pad of screen design pads, and a cassette with a spoken commentary on one side, all in a polythene bag. No other program gave such value for money. The program is written in Basic and allows the user to design screens which can then be saved for incorporation in other programs, which make use of high- and low-resolution graphics, text, and user-designed alphabets of large letters. The "slide-show" option automatically loads successive screens. High-resolution pictures of a bicycle and southern England among others flash up in turn very much like a slide-show for the unemployed.

Two simulation games are available from Case Computer Simulations. Autochef allows you to work your way up as manager of a small catering company. At first you have to avoid being taken over by Trust House Forte — later if you survive you can try to take over Forte yourself. Airline is exactly the same as Autochef except that you are running a small airline.

The two assemblers were useful because they save you money by not buying at inflated prices books which disassemble the Spectrum ROM. Of the two the Campbell version is more attractive as it is written in Basic, and one can learn from studying the program listing — warts and all.

The Artic version was difficult to follow, as the documentation had not been prepared, but if the Spectrum documentation is as good as the ZX-81 documentation then it will be terrible. Given the incomplete nature of both offerings, the cheaper price, and the ability to convert from hex to dec and vice versa, sometimes with amusing results, the Campbell Systems offering may be better value. ■

Firm	Program (Type)	Comments	Price

NEW. SOFTWARE SUPERMARKET

**YOUR ONE-STOP POSTAL SHOP FOR ALL THE BEST
ZX81 PROGRAMS. FROM £4.50.**

Now you can order the very best ZX81 programs with just one postage stamp. We've started SOFTWARE SUPERMARKET to make it easy for you to buy more programs. And, to help you choose, we've selected the games we've enjoyed most: games that give lasting pleasure, games that stretch the ZX81.

All games need a ZX81 with 16K Ram.

1. MAZOGS. (Bug Byte). £9.95. "Great," said Popular Computing Weekly "a grossly addictive game." We agree. It's a maze game with great graphics. You'll really feel you're running through the maze, sword in hand. 3 different variations on this one tape. Great value.

2. ZUCKMAN. (D.J.L.) £5.95. "Very user-friendly... a fast and interesting game." (Sinclair User). A very good version of the famous arcade game. If you're skillful, your name and score are displayed in the Zuckman Hall of Fame for your friends to admire.

3. 3D MONSTER MAZE. (J.K. Grege). £4.95. "The graphics are incredible... and the game is very good indeed." (ZX Computing.) Until you've seen the full-screen tyrannosaurus rex chase you through his 3-D maze, you won't believe it either.

4. 3D DEFENDER. (J.K. Grege). £4.95. "Amazing 3-D graphics effects are created as the enemy draws closer... another winner." (Sinclair User). Watch through your spacecraft windows as the alien craft attack in astonishing 3-D detail.

5. TRADER. (Pixel). £9.50. The most astonishing graphics as you travel round 6 planets. This is a 48K game but only needs 16K Ram. The print-out alone is 6½ metres long! Starts with a 25-second Test load.

6. THE ZX ARCADE PACK. (Control technology). £4.95. A brilliant collection of fastmoving machine code arcade games. Two kinds of invaders, one traditional, the other swooping, soaring Galaxians. Plus 6 more games, including a great graphic gunfight.

7. VOLCANIC DUNGEON. (Carnell). £4.50. One of the great adventure games. Rescue the princess, if you can. It took us 3 months - and we never got bored... Fast, single-key entry: map included. PLUS a good graphic HANGMAN game: 400 word vocabulary (or enter your own words). Our children's favourite.

8. THE DAMSEL AND THE BEAST. (Bug Byte). £6.50. Another exciting adventure. Find the damsel, then kill the beast (club and torches provided), lead the damsel out before she starves. But wait until she screams... 3 game variations.

9. ZX OTHELLO. (M.O.I.) £6.95. "Recommended without reserve... it is a superb opponent." (Your Computer). The classic board game in its very best computer form. You'll see plenty of 'Reversi' listings, but this program makes it as challenging as chess.

10. ZX CHESS II. (Artic). £9.95. "The seemingly impossible has happened - you can play high resolution chess on a Sinclair." (C. and V.G.) The strongest ZX81 Chess Game around. All legal moves: 32 opening moves: 7 play levels - 4 within competition time limits. (Full Board Graphics available with Quicksilver CHR \$ Board).

To order these games, please complete the coupon. ADDRESSES ABROAD, please add 20p per £ for extra p&p.

PROGRAMMERS! If you would like us to evaluate your software for possible future inclusion, please send cassette, price list.

POST TO: SOFTWARE SUPERMARKET, 87 Howard's Lane, London SW15 6NZ.

I have a 16K ZX81. Please send me the programs indicated below.

I enclose a cheque/PO for £ (total order value) made payable to Software Supermarket.

The new Dragon 32. So well designed, you'll even understand this ad.

If you're already a computer expert, may we refer you to the box of technical specifications displayed opposite.

If you're not, may we refer you to the new Dragon 32 Family Computer. A computer so easy to understand, you won't understand why all the others seem so difficult.

And the new Dragon 32 costs under £200.

32K RAM FOR UNDER £200?*

When you're comparing computers, the first thing you need to know is the size of the memory. In plain English, the Dragon has approximately 32 thousand units of Random Access Memory. (32K RAM for those who prefer to be blinded by science.) This means that the Dragon's memory is at least twice as powerful as its competitors.

With a memory this powerful, the amount of information the Dragon can store is literally vast. But the Dragon doesn't just make it easy to store information. It makes it easy to use, too.

USER-FRIENDLY?

You may have heard of the term 'user-friendly.' Reverting to plain English once more, this means simply that the computer will go out of its way to understand you, rather than vice-versa.

The Dragon 32 is so user-friendly, it practically licks your hand.

You tap (literally) its vast resources through a beautifully-designed keyboard that's as easy to use as a typewriter.

On this keyboard, you type in a language which is surprisingly close to the English you talk every day. The Dragon 32 will receive your order. Understand it. Send it to the appropriate section of its massive brain. And then display the appropriate information on your screen. All before you can say 'gobbledygook.'

*TV not included in price.

SPECIFICATIONS	
6809E MICROPROCESSOR. Pet, Apple, Atari 400, BBC Micro, and VIC 20 still have the less powerful 6502.	
32K RAM (as standard). At least twice the power of similarly priced machines. Expandable to 64K RAM.	
EXTENDED MICROSOFT COLOUR BASIC (as standard). Featuring: ADVANCED GRAPHICS (set, line, circle, paint, print, draw, rotate and print using). ADVANCED SOUND 5 octaves, 255 tones. AUTOMATIC CASSETTE RECORDER CONTROL. FULL EDITING with INSERT and DELETE.	
9 COLOUR, 5 RESOLUTION DISPLAY.	
USE WITH ANY U.H.F. TV and/or separate P.A.L. monitor.	
PROFESSIONAL QUALITY KEYBOARD. Typewriter feel. Guaranteed for 20 million depressions.	
PRINTER (Centronics parallel).	
JOYSTICK CONTROL PORTS.	

FIRE YOUR IMAGINATION.

Learning how to use the Dragon 32 won't cause you to experience any problems. Learning what you can use it for will cause you to experience something entirely different.

Delight. Surprise. Fascination. And challenge.

The Dragon offers a range of some of the most popular computer games in the world. From those celebrated space battles to mind-boggling adventures in seemingly unfathomable dungeons and caves.

As if by magic, a simple typed message will command the Dragon to create your own drawings. Then it will colour and paint them in 9 colours.

And it's clever enough to create virtually any image you want - circles and arcs as well as straight lines.

The Dragon will also play and compose music with you, with a range of 5 octaves. And it works with any UHF TV or PAL monitor.

LEARNING THROUGH PLAYING.

All of this makes the Dragon the ideal machine to build your children's interest in the world of computers as they become increasingly more vital. School-children already enjoy using computers.

The Dragon is the first computer specifically for the family - so by enjoying yourselves at home, you and your children can soon become expert enough to create your own programs.

BRILLIANTLY SIMPLE GUIDE.

The Dragon is living proof that you don't have to be an expert in computerspeak to be an expert in computers. It comes with the easiest-to-understand instruction manual ever written for a home computer.

Every step, every explanation, is made clear - even if you're a beginner. In minutes, it will show you how to write a simple program. Within hours, you'll be fascinated. And from then on, you'll continue to be astounded by the new world which the Dragon's power and versatility will open up to you.

See the new Dragon 32 in your High Street. At under £200, it's not just the first family computer. It also has all the features an expert could wish for.

Except perhaps the jargon.

DRAGON 32

The first family computer.

LET ACORNSOFT OPEN THE DOORS TO YOUR IMAGINATION

BBC Microcomputer or Acorn Atom

Acornsoft is the software division of Acorn Computers, designers and manufacturers, of the BBC Micro and Atom. They know better than anyone the capability of the machines, they know how to get the very best from the hardware. And they have produced a range of exciting games, exacting business and useful household software.

The Biggest Range Available

Acornsoft software ranges from authentic arcade games like Snapper to Algebraic Manipulation to Desk Diary to other languages like FORTH and LISP. Striking colour, amazing sound effects and powerful graphics are all used to the full. And it does not stop there. There is a complete range of manuals, accessories and plug-in ROMs.

Free Brochures

Just clip the coupon or write to us and we will rush our catalogue absolutely free. Can't wait for the post

ring 01-930 1614 now! Don't delay – do it today. Let Acornsoft help you get the best from our machine and open the doors to your imagination. Acornsoft and Atom are registered trade marks of Acorn Computers Ltd.

MEMOTECH Explores the Excellence of your ZX81

THIS MONTH -
**2 NEW
PAKS!**

MEMOPAK
CENTRONICS I/F

MEMOPAK 16K

MEMOPAK 64K

MEMOPAK HRG

**MEMOPAK
32K RAM**
Operates in tandem
with Sinclair 16K Ram
to give a full 48K!

Memotech's Memopak Range

All five of the currently available Memopaks are housed in elegant black anodised aluminium cases, and are styled to fit wobble-free onto the back of the ZX81, allowing more add-ons (from Memotech or Sinclair) to be connected.

£68⁷⁰

plus VAT

MEMOPAK 64K MEMORY EXTENSION

The 64K Memopak extends the memory of the ZX81 by 56K, and with the ZX81 gives 64K, which is neither switched nor paged and is directly addressable. The unit is user transparent and accepts commands such as 10 DIM A(9000).

Breakdown of memory areas...0-8K-Sinclair ROM. 8-16K-This area can be used to hold machine code for communication between programmes or peripherals. 16-64K-A straight 48K for normal Basic use.

£43⁴³ / £26⁰⁰

plus VAT

MEMOPAK 32K and 16K MEMORY EXTENSIONS

These two packs extend and complete the Memotech RAM range (for the time being!) A notable feature of the 32K pack is that it will run in tandem with the Sinclair 16K memory extension to give 48K RAM total.

£52⁰⁰

plus VAT

MEMOPAK HIGH RES GRAPHICS PACK

HRG Main Features — • Fully programmable Hi-Res (192 x 248 pixels) • Video page is both memory and bit mapped and can be located anywhere in RAM. • Number of Video pages is limited only by RAM size (each takes about 6.5K RAM) • Instant inverse video on/off gives flashing characters • Video pages can be superimposed • Video page access is similar to Basic plot/unplot commands • Contains 2K EPROM monitor with full range of graphics subroutines controlled by machine code or USR function

£34⁷⁰

plus VAT

MEMOPAK CENTRONICS TYPE PARALLEL PRINTER INTERFACE

Main Features — • Interfaces ZX81 and parallel printers of the Centronics type • Enables use of a range of dot matrix and daisy wheel printers with ZX81 • Compatible with ZX81 Basic, prints from LLIST, LPRINT and COPY • Contains firmware to convert ZX81 characters to ASCII code • Gives lower-case characters from ZX81 inverse character set

ADVERTISEMENTS for the NewBrain suggest that after using its graphics to impress the board of directors, a businessman can pop the machine into his briefcase and take it home to entertain or instruct the family: Junior can learn a foreign language while mum can ... You are probably familiar with this rather unconvincing scenario. Despite those claims, it seems clear that the NewBrain has been designed primarily for business applications. Its role as a personal or home computer is only at best a secondary one.

However, since the machine costs little more than a Vic or a Spectrum it is not unfair to consider it in the same light. Could the NewBrain compete with pure and simple personal computers on their own ground?

Expandable memory

Model A costs £233 and Model AD, which has a single-line fluorescent display on board as an extra feature, costs £267.50. The line display is 16 characters wide and can act as a window on the screen or separately. Both models come with 32K RAM and 29K ROM.

An unusual feature, more appropriate to the NewBrain's business role, is its very large memory expandability. Each expansion module supplies up to 512K RAM. Connecting up to a maximum of four models would make 2Mbytes of memory available.

Despite the unit's compact size, the keyboard has almost a full typewriter span and the keys allow fast typing speeds. At the back there are sockets for two cassettes, TV and monitor, ports for a printer, Modem and expansion board but no power switch. This is an irritating omission as it is not difficult to crash the system.

Graphic range, no colour

The NewBrain does not offer colour or sound — probably its major failing as an alternative to other similarly-priced home computers. In compensation, it provides a wider range of text characters and graphic symbols than any other micro at this price. By using the control key you can choose one of four character sets, drawn from a total of 512 characters, including more than 150 graphic symbols and the Greek alphabet. A single-statement entry can change the display from a 40-character by 24-line format to 80 by 30.

Although NewBrain's Basic is compiled and conforms to the ANSI standard, its set of terms and functions is more or less the same as that of the more common Microsoft interpreted Basics. The command Put, for example, has a similar but wider function to the BBC's VDU statement: not only can it send cursor-control codes to determine the display output but it can also send control codes or data to any other device such as the line display or printer.

String handling is supplemented by INSTR, which searches a string for a selected character and returns its position, and a facility for defining string functions. A function FNFS(A\$), for instance, could be defined to insert the string A\$ in a given sentence.

The screen editor is one of the most effective available and compares very well with its Spectrum or Vic counterparts. You can readily

Two years have elapsed between the NewBrain's announcement and its appearance on the micro scene. For its £233 home-computer price, it seems to offer many business facilities. Simon Beesley finds out whether Grundy's micro will be happier in the home or in the office.

delete any part of a program line in front or after the cursor, insert code and split a line into two, using a combination of the Insert, Repeat, Shift and Cursor keys.

So far, straightforward enough. But if you wish to take full advantage of the machine's capability you will need a certain amount of patience and perseverance. The Open statement allows you to open and define, through a list of parameters, an input or output data "stream" to a particular device such as a TV or monitor, or the printer.

Thus, the console stream which links keyboard and display can be redefined to give the display a width of 80 characters and a depth of 100 lines. Only 24 lines will be visible but by using the cursor keys 100 lines of text can be scrolled up and down the screen window.

Alternatively, a separate stream can be opened to write to the line display alone.

In effect this brings a number of input and output routines, which are more commonly submerged in the operating system, under the programmer's control. But given the novelty of this feature, its uses and applications are explained in the manual in too sketchy a fashion.

Not so user-friendly

Far from being "friendly" at times the system appears to be downright hostile, as one of a total of 120 error codes sends the user scurrying to the error appendix. Much of the blame here can be ascribed to poor documentation.

The procedure for obtaining high-resolution graphics is somewhat cumbersome. First you have to open an area memory for a text screen,

which can then be made available for high-resolution graphics by linking a graphics data stream to the text stream. Once you have accomplished this, you will have a relatively powerful graphics capability at your disposal.

Defining the width and depth of the screen, and as a consequence its resolution, gives a choice of 256, 320, 512 or 640 pixels horizontally and up to 250 pixels vertically. The statements Range and Centre permit you to choose the scale of the x and y pixel co-ordinates and position the origin, while Axes draws and marks off the two axes.

The command Fill fills in an area and Arc draws an arc through a given angle. Other commands allow lines to be plotted either relative to the pen position or in terms of the screen co-ordinates; the pen can be moved or rotated without drawing, and mixing graphics and text is possible.

In common with the Atari and the Dragon, the NewBrain does not hold its screen data in a fixed area of memory. This makes it possible to create multiple screen memories in RAM and switch between them. You could set up a screen page 200 lines deep; scroll it up or down the screen window and then jump to any other page of text or high-resolution graphics.

Educational applications

This facility has obvious potential for educational applications, graphic games and animation effects. Naturally enough it consumes a good deal of memory: creating a screen page 40 characters wide by 200 lines deep takes up more than 10K.

None of these techniques is, however, covered in sufficient detail by the manual, which bears all the marks of rushed preparation. The released version of the *NewBrain Handbook* contains an errata slip, listing some 35 errors and it was no surprise to find a small error among the slip's corrections.

Those commands that will be relatively new to anyone reared on, say, a Sinclair or Commodore micro are only briefly, and sometimes obscurely, explained. The *Software Technical*

Manual, seen in a pre-draft version, describes the various operating system modules and does not enlarge on the *Handbook*.

What is needed is something like the *Programmer's Reference Guide* for the Vic-20, which expands on the manual's explanations before gently initiating the user into the higher mysteries of the operating system.

Admittedly, most manuals leave something to be desired and compared with the BBC's manual — still provisional after all these months — the NewBrain's is a model of thoroughness. Perhaps the *NewBrain Beginners' Guide*, promised for the near future, will make life easier for the newcomer.

CONCLUSIONS

- As a business machine, the NewBrain should do well: its highly adaptable operating system and large potential memory makes it suitable for applications which were hitherto only within the scope of machines several times as expensive.
- The low quality of its documentation will not matter here since its memory capacity — 4Mbytes of ROM can be accessed through a ROM Buffer expansion module — should encourage the production of easy-to-run, tailor-made software.
- It will also shortly be possible to attach a communications interface enabling 32 NewBrains to share the same peripherals. This could well earn it a place in the micro education market.
- It is unlikely that these features will appeal to the bulk of personal computer buyers, most of whom will be deterred by the lack of colour and sound.
- On the credit side, no other computer under £300 offers such an extensive character set or such high-resolution graphics.
- It could not be recommended to a beginner but could prove attractive to an experienced user who is prepared to explore some of the possibilities only hinted at in the manual.

HERMANN HAUSER:

What made the BBC choose Acorn not Sinclair — and why is Hermann Hauser, Acorn's Technical Director, so sure the Electron will upstage the Spectrum? Meirion Jones hears the inside story.

SIX O'CLOCK ON a bleak December morning and all was far from well. Acorn's design team had been working round the clock since Monday when the man from the BBC had called. Now it was Friday and in a few hours he would be back to see the working prototype he had been promised by the end of the week.

Unless they managed to have the machine working, the BBC might take the project elsewhere. Hermann Hauser had to think quickly. "I said: 'It's very simple — you are cross-linking the clock between the development system and the prototype. If you just cut the link it will work.'"

The tired team was sceptical about "another Hermann suggestion" but they cut the umbilical cord to the machine. "Lo and behold, it worked. It was a great moment — absolutely terrific to see this machine spring into life."

Hermann Hauser's quiet enthusiasm is infectious as I found when I recently witnessed the first successful test of Acorn's new speech synthesiser. As the BBC micro began to give voice "One .. two .. three .." one Acorn engineer was unable to contain himself: "This is much better than we've ever had — it must be the only British English-speaking computer there's ever been."

Predictably, perhaps, the people who brought you the BBC computer are now working on the BBC computer voice. Instead of the Detroit Dalek sound favoured by previous chips Acorn has employed a disembodied Kenneth Kendall to declare "This is an Acorn computer" much as he might have intoned "This is the nine o'clock news".

By October, Acorn will be selling an add-on Kenneth Kendall-speak ROM and speech processor for the BBC machine. The first unit will voice letters, numbers, keyboard symbols and commonly-used commands. Later Acorn will release a more comprehensive allophone package about which the engineer was even more enthusiastic: "Allophone speech will have inflections as well — it will be really amazing."

Hermann Hauser describes the advantages in more measured tones:

"You can concatenate allophones to make any utterance in the English language."

An English language course was what first persuaded Hermann Hauser to leave the attractions of his family's wine business in Austria and come to Cambridge. Although he went back to Vienna to take a physics degree, he soon returned to Cambridge to complete a PhD in solid-state physics at the Cavendish laboratory.

Motivated by an urge "to find out what makes the world tick — in its innermost workings" Hauser developed an interest in artificial intelligence.

Some of Acorn's current ventures involve artificial-intelligence techniques, but Hauser's first venture was more mundane. After persuading Chris Curry to leave Science of Cambridge in 1978, the two of them set up first CPU and then Acorn Computers.

"The first thing we did was a consultancy job for a fruit machine manufacturer". Hauser soon found that although it was easy to make the one-arm bandit do what you wanted, it was difficult to prevent it paying up when it should not: "It lives in a very cruel environment — people bang it and throw beer at it and try to fool it." Eventually Hauser had to build in a VHF radio to detect sparks

'Very much an Apple and Pet competitor and beyond'

"so that if anyone walked up to it with a spark gun it would switch the machine off and reset it".

Meanwhile Sinclair was having great success with his Mk14 hobby computer. Once 10,000 had been sold Hauser decided that "the so-called consultancy work we were doing for other people we might as well do for ourselves".

Acorn's first machine, the System 1 was "way above the Mk14 — rather more compact but still aimed at the hobby market. We were in a very exciting field. Everyone knew that whatever the market was going to do, it wasn't going to shrink."

The first sign that micros would become more than hobbyists' toys was when Newbury Laboratories first announced plans for the NewBrain in 1980. Acorn responded within six months by producing the Atom.

Such speed was possible because "at that time the sums needed to develop new machines were not very high and the marketing concept was right thanks to Chris Curry. Also

Acorn works effectively as a team".

"During the development of the Atom, schedules were very tight — the whole design team would take a break about 7pm and discuss things over dinner together then go back and work till 10 or 11pm."

At one of these brainstorming sessions the team heatedly discussed what features they would like to see in the Atom's successor — at that time tentatively called the Proton.

"All these prima donnas in the design department had very strong

'Sinclair is comparing chalk and cheese'

ideas of what they wanted. One wanted a double-processor system, another said: 'It can all be done on a single processor'. Andy Hopper said it had to be a 16-bit machine. Chris Curry said: 'Boys, whatever you do don't make it more than £300'."

There seemed to be no way to reconcile all these conflicting demands until the idea of a self-contained but infinitely extendable system was suggested. "The tube solved our problems — everyone could have all they wanted and more. We could start with an inexpensive 6502-based machine and then make a second processor and eventually a 16-bit extension available. We had a good drink after that and got rather self-congratulatory."

Soon afterwards the BBC came along and the race was on to turn the idea of the Proton into a working BBC prototype. Hauser rejects Sinclair's criticism of the BBC deal.

"He seems to have a terrible chip on his shoulder about this because he was not the chosen one. The BBC used us because they came on the Monday with the specifications they wanted and returned on the Friday and saw a working prototype."

"I defy anybody else in this country to build a completely new 32K computer that quickly. 'We employed the fastest gun in Cambridge — called Ramany Banerjee — not only is he an excellent designer, he can also wire wrap faster than other people can call out the connections."

Hauser is not afraid of Dragons — or for that matter of Spectrums or any other new micros: "None of them is expandable in the same way as the BBC — that market will be adequately dealt with by the Electron."

"The BBC is very much an Apple and Pet competitor — and in fact beyond that because of the 16-bit extension. It is a very advanced design and we do not see any computers with these features

appearing for another year or so. A very useful extension offering Z-80 and CP/M will be available in the autumn and the 16032, 16-bit extension by the end of the year."

The 16032 is really exciting — you can go up to megabytes of RAM, you can run the Unix operating system and big languages such as Fortran, Cobol and PL-1."

"Sinclair is the only one who has enough arrogance to compare the BBC computer with his own. He is comparing chalk with cheese and it is based on his own exceptional arrogance rather than the facts."

"We thought the appropriate way of dealing with this was to produce a machine which shows him how it is really done. 'You get these quantum leaps in electronics — we will leap-frog Clive Sinclair with technology. The Electron will have twice as much ROM, twice as much RAM and an uncommitted logic array (ULA) three times as big as the Spectrum's."

Hauser attributes Clive Sinclair's prominence to his public relations: "He has a remarkable machinery for dealing with the press — second to none in our field. It is quite remarkable the way he fights with this weapon. Despite his claims, his machine is not very complex — whereas ours exploits RAM, ROM and ULA technology to the full. We

ACORN

do not know of any other company that is capable of doing it. The Electron is right at the cutting edge of technology."

One of the penalties of being on the cutting edge of technology seems to be production difficulties. When the subject of Acorn enthusiasts who have grown old waiting for their BBC micros is raised, Hauser smiles: "We've learnt our lesson." The only lesson learnt by the tens of thousands still waiting for Spectrums and BBC model Bs might be never to trust the word of a micro company — so how does Hermann Hauser

INTERVIEW

N IN A NUTSHELL

explain the late-delivery problem?

"It is always very difficult to predict the exact numbers people will order, and you can only predict to within a factor of two or three — if you estimate too low you have serious delivery problems — if too high you can go bust because you've ordered too many components."

"We are the only company in this field which designs its own ULAs. This allowed us to produce a computer as versatile as the BBC because we were able to milk the Ferranti processor — but it also meant that we had difficulties in

high-volume production because the yield was too low. There were limitations of the Ferranti processor that neither we nor they knew about."

How does Acorn intend avoiding these problems with the Electron? "We are now of a size which allows us to pick our subcontractors with care — if they say something will arrive in June you can bet it will."

"The chip that we are doing for the Electron is a very much more cautious approach to ULA design — there won't be any problems with the ULA."

Acorn has been accused of profiteering from the delays by raising BBC prices. Hauser answers: "If you look at the specification of this machine it is still too cheap." As for the backlog for model Bs: "I know we have made promises before but we are now in really high-volume production."

Hauser praises Sinclair for trying to develop new storage devices. "The Microdrive heralds a new generation of microflops," but then he qualifies this: "Although once again Sinclair is cultivating much better public relations than the other companies, I think he has got it wrong — it is unwise at the

moment to go for a non-standard drive."

Hauser expects the Microdrive to become obsolete quickly because of a lack of real random access. "There will be a standard 3.5in. or 3in. drive which will be produced in world-wide quantities, and will be not only be less expensive but will also provide the facilities the Microdrive

'The Electron is right at the cutting edge of technology'

lacks." Hauser expects Acorn to be selling its own version of this drive by next Easter.

One of the fruits of Acorn's collaboration with the BBC was the language for the BBC Micro. Hermann Hauser hopes that BBC Basic will become as much of a standard as BBC English.

"No other Basic in our field supports structures which is important if you want to teach good programming. It is very advantageous to split the program into blocks and debug them individually

so you can say: 'Now I know this works I can go on to the next one'."

Nor is this the only advantage Hauser claims: "Our Basic runs between four and 10 times faster than anybody else's — in particular Sinclair's. As a result you can write programs in Basic which other people have to write in machine code."

Hauser does not believe that Sinclair's Basic has become the standard by virtue of sheer numbers: "There are more people using ZX-81 Basic — but the question really is does one want to standardise on the lowest common denominator. It would be wrong to home in on a standard which leaves out essential elements in the language."

Another spin-off from the BBC deal was Acorn's involvement in setting a telesoftware format which may become the U.K. standard.

Acorn seems determined to maintain a broad range of skills: "We've hardware expertise, software expertise, local-area networks, chip design, all in-house." The company plans to launch a phenomenal number of products over the next few months. In addition to the BBC speech chip and of course the Electron, the company will be launching AcornCalc, a financial planning package, and a networking system for the BBC.

Hauser loves Cambridge but the reasons for Acorn being based there are rather more hard-headed: "The same reason that made Highway 128 in Boston and Silicon Valley what they are — spin-offs from the university — access to good graduates and computer lab facilities. If I do have a problem I can just pick up the telephone."

Microcomputer companies are notorious for not making use of their own technology. But even though there is no sign of a computer in Hauser's office he insists: "We do want to be different there". Plans are in hand to install a network inside Acorn.

Eventually Hauser would like to connect up his BBC at home to the office network. In the meantime: "I use it for games at home like everyone else — I try out new Acorn software — and sometimes find bugs in it that the other boys have missed. Being a physicist I use it for calculations or for working out company problems."

Hauser's continued interest in physics is evidenced by the choice of elementary particles as names for Acorn's computers: Atom, Proton, Electron. At the height of the delays some wit even suggested that the BBC/Proton should have been called the Quark because people had been waiting so long to see one.

So how long will we have to wait for the launch of the Electron? "The other lesson we learnt from the BBC machine is not to announce a product until you are sure you can deliver it — that's why I'm cautious and say it will be out by the end of the year."

Acorn's prototype speech synthesis unit wired up to a BBC Micro.

KAYDE Electronic Systems Ltd

ZX KEYBOARDS FULLY CASED

ZX81 WITH REPEAT KEY

This is a highly professional keyboard using executive buttons as found on top quality computers. It has a repeat key and comes complete in its own luxury case. This is a genuine professional keyboard and should not be confused with toy keyboards currently available on the market.

As reviewed by Tim Hartnell
ZX Computing/Interface

£37.95

NEW

SPECTRUM

This is a highly professional keyboard, taken from our World Famous and well proven 81 keyboard, it has been redesigned to complement your ZX Spectrum.

ZX CHESS & ADVENTURES

PROGRAMS FOR THE ZX81/80 INCLUDING -

NEW
NEW
NEW

**16K BYTE RAM
PACKS
£31.95**

Full implementation of FORTH on ZX. No longer held up by the slow BASIC - FORTH runs 10-26 times faster than BASIC.

"Simplicity of BASIC with speed of Machine Code"

'BYG BYTE' Ram pack, no Wobble problems, 1 year guarantee on each Ram Pack. Simply the best you can buy. Immediate Delivery.

**1K ZX CHESS!!
£2.95**

We didn't think it was possible but this game plays against you. Two opening moves, needs 1K of RAM to run. Incredible.

**ADVENTURES
ADVENTURE 'A'
£6.00**

Exciting machine code games with instant response, choose from the range below. You find yourself stranded on an alien planet. Can you reach your ship and escape?

**ADVENTURE 'B'
£7.00**

In a jungle clearing you come across an Inca temple. You must break in, collect treasure and escape alive. Beware. Includes a cassette save routine.

**ADVENTURE 'C'
£8.00**

You are unfortunate enough to be drawn to an alien cruiser. Can you reach the control room and free yourself or will they get you first? Includes a cassette save routine.

GALAXIANS £3.95

All the features of the arcade game in a fast machine code program. Swooping attackers, explosions and personalised scoring.

ZXBUG £7.00

A 30 in 1 machine code tool and disassembler, allows access to registers and search through and modify memory; with cassette routines.

ZXCHESS

TWO GREAT ZX81 16K CHESS GAMES ZXCHESS (ENHANCED)

- Written totally in machine code.
- Full graphic display of Chess board.
- Six levels of play: Two play within competition time limits.
- Option to play Black or White.
- Plays all legal moves including castling and en-passant.
- Cassette routines for saving unfinished game and returning to later.
- Displays moves of game on screen or printer for analysis.
- Print a copy of the Chess board onto the printer.
- Board can be set up in any position, you can even swap sides midgame.
- Clear whole board with one command: for end game analysis.

£6.50

ZXCHESS II We believe the strongest ZX81 Chess game as no other has beaten it!!

- All the features of ZXCHESS plus:
- Book of 32 opening moves.
- Seven levels of difficulty: FOUR play within competition time limits.
- A move is suggested by the ZX81 if wanted.
- Optional Full Graphic version using the QS CHRS Board.

£9.95

2 copies supplied on cassette with full instructions. Cheques and postal orders payable to:

... is a stylish and ergonomic plinth for the ZX81. It raises and tilts the TV to avoid eyestrain, holds the 16K RAM in place and hides the wiring and power supply. This very professional unit costs £15, a built-in power switch is £3, plus postage at £2.00, inc. VAT.

Peter Furlong Products, Unit 5, South Coast Road Industrial Estate, Peavehaven, Sussex BN9 8NA.
Telephone 07914-81637 for C.O.D. and Credit Card Sales.

AND NOW!

Spectrum workstation

£16.00
plus £2 postage

Extras:
On/Off switch £3.
Alloy base £3.50.
Speaker £3.50
ACCESS, VISA.

Following the success of our ZX81 plinth we have introduced a workstation for the Spectrum. This stylish ABS plinth raises and tilts the TV for better viewing whilst angling the Spectrum and making typing easier. The PSU is hidden underneath, the printer and cassette may still be used, and a matching, stackable unit for Microdrives will be available.

Peter Furlong Products, Unit 5, South Coast Road Industrial Estate, Peavehaven, Sussex BN9 8NA. Tel. (07914) 81637.

THE DAM AT the head of the valley is under attack from an unidentified source. If the dam bursts, the water will escape and flood the valley, killing thousands. Your mission is to destroy the aggressors, code-named Nibblers, and save the dam.

The Nibbler appears on the right-hand side of the screen and moves across towards the dam on the left. To stop the Nibbler and launch your ship at the same time, you hit the space bar. When you are directly above the Nibbler, press the space bar again to drop your bomb.

If you hit the Nibbler, your score increases by one point and the dam has been saved for a little longer. But if you miss, you forfeit a point and the Nibbler lives on to destroy part of the dam. Another Nibbler will then appear on the right-hand side of the screen.

Once the dam has been totally breached, the water will escape and flood the valley, and you have failed in your mission. You are then told your score and time taken, and asked if you want to try again. Type "Y" for another game and "N" if you wish to stop — nothing else will be accepted.

If the computer has been expanded and so has extra memory you could use the user-definable graphics capability of the Vic to improve the game. If so, the following routine should be added at the end of the program, and line 3 changed to:

```
3 PRINT CHR$(14): GOSUB 1000
1000 FOR I = 0 TO 1024
1010 POKE 5120 + I, PEEK (32768 + I): NEXT I
1020 FOR I = 0 TO 1024: READ A
1030 IF A = 1 THEN 1070
1040 POKE 6144 + I, A: NEXT
1050 DATA 56, 124, 230, 3, 3, 230, 124, 56
1060 DATA 24, 60, 102, 231, 166, 24, 36, 68
1070 POKE 36869, 253: POKE 36866, PEEK
(36866) OR 128
1080 RETURN
```

If this program is used, the Pokes and Peeks will have to be changed — 60 to 128 and 62 to 129.

The main variables used in the program are:

B — position of ship
C — position of bomb
D — position of Nibbler
O — highest score
S — score

The other variables are used mainly in For — Next loops etc. Here is a more detailed explanation of the program:

3: switches to text mode.
4 to 68: print the title page. The graphic symbols are obtained by pressing shift and each of the following: NIBBLERS.
65: note that there are eight spaces after the cursor symbols.
70 to 150: print out the instructions for the game.
70: the graphics symbol is shift and "T".
80: the graphics symbol is shift and "N".
110: the graphics symbol is shift and "T".
120: the graphics symbols are shift, together with "S" and then "N".
130: the graphics symbol is shift and "I".
140: the graphics symbol is shift and "H".
159 to 260: construct the dam and fill the reservoir with water.
261 to 262: print the score and resets the timer.
270 to 280: set up the random position of the Nibbler.
290 to 294: check to see if the Nibbler is hitting the dam or the water.
295: turns on the sound register and vibrates screen from left to right.
450: if the space bar is pressed then the bomb drops, else continue moving Nibbler.
491 to 500: plot the falling bomb.
505 to 512: checks to see if bomb has hit the Nibbler or the ground. If not, then continue to plot the bomb.
552 to 554: explosion sound effect.
565 to 568: vibrate screen up and down.
578: restores screen to normal position.
590 to 616: plot the water pouring out of the dam.
620 to 646: print your score and the time that you lasted for.
620: graphics symbol is shift and "T".
645: graphics symbol is shift and "Y".
650: graphics symbol is shift and "A". Type "Y" for another go, or "N" if you wish to stop.
710: switches the computer back into graphics mode.

GAMES VIC DA

Can you stop the Nibblers destroying the dam? Dave Shambrook's game is for the unexpanded Vic-20.

"...the quality of the colour display is excellent" *Popular Computing Weekly.*

"The graphics facilities are great fun" *Personal Computer World.*

"...the Spectrum is way ahead of its competitors" *Your Computer.*

"The world's best personal computer for under £500."

Chris Sinclair

Sinclair ZX Spectrum 16K RAM £125, 48K RAM £175.

This is the astonishing new ZX Spectrum – a powerful professional's computer in everything but price!

There are two versions – 16K or a really powerful 48K. Both have a full 8 colours, sound generation, a full-size moving-key keyboard and high-resolution graphics. Plus established Sinclair features such as 'one-touch' keyword entry, syntax check and report codes!

Key features of the Sinclair ZX Spectrum

Full colour – 8 colours plus flashing and brightness-intensity control.

Sound – BEEP command with variable pitch and duration.

Massive RAM – 16K or 48K.

Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.

High resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.

ASCII character set – with upper- and lower-case characters.

High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY and MERGE for programs and separate data files.

The ZX Printer – available now

The printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

ZX Microdrive – coming soon

Each Microdrive will hold up to 100K bytes on a single interchangeable microfloppy – with a transfer rate of 16K bytes per second. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum – they're available later this year, for around £50.

How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day.

BY FREEPOST – use the coupon below. You can pay by cheque, postal order, Access, Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

BBC SPECTRUM VIC

You don't need to be one to use our
Magnetic Character Plotter
— it's simply the best thing since sliced bacon!

The **MCP** is designed for use with personal computers having a user definable character facility — SPECTRUM, BBC, VIC and many other.

A quality product having two 8x8 plotting grids on which the black magnetic markers are arranged to create or amend your "Space Invader", Russian scrip, electronic symbols etc. Your only limit is your imagination? Use both grids to plot larger characters.

The **MCP** is manufactured in durable p.v.c. as a pocket wallet so that you can quickly and easily "plot" anywhere — on the bus, lunchbreak, in the bath! Plotting on paper is just plain tedious and old fashioned.

MCP £0
34, WOODSIDE,
HARROGATE,
NORTH YORKSHIRE
HG1 5NG.

£2.95
(Post and packing free)

NEW ZX SPECTRUM ROULETTE 48K

- Full colour Monte Carlo betting table on continuous display.
- Betting chip placement on table.
- Practically any bet can be placed.
- Suitable for 4 named players.
- Good linear simulation of peripheral wheel numbers with realistic slowing down.
- Ball jumps around before settling.
- All winning numbers, even money, column and dozen bets automatically flashed.
- Each player informed of any wins and bank accounts automatically credited.
- Sound effects.

GAME PACK — Best this for value! 5 - 15K programs PLUS 2 - 1K programs
3D Battle (M-code-1K) — Fast moving space battle with continuous random events of strategic value.
City Bomb (M-code-1K) — Destroy the buildings and land your plane. Your task has really gone and you're in the city center and there's a bomb.
Warp Wars (Basic & M-code-15K) — Features realistic space craft moved by M-code for smooth, solid movement with a lot of response.
Sweet Tooth (Basic & M-code-15K) — M-code routine used to move your ship through the mine and dodging the mine.
PLUS Slalom and Black Holes (M-code-15K) — M-code routine used to move your ship through the mine and dodging the mine.

An ESSENTIAL addition to your 1K RAM ZX81 or ZX80 8K ROM!

TOOLKIT — Written by PAUL HOLMES!
Provides the following additional facilities:
Line number — you state starting number and increment within.
Search and replace — changes every occurrence of a character as you require.
Free space — tells you how many free bytes you have left.
SPECIAL GRAPHICS ROUTINES:
Hyper graphics mode — graphics never seen on a ZX81 before.
Open — instantly sets up as many empty print lines as you require. 1K version only.
Fill — used in conjunction with OPEN fills your screen instantly with your specified character.
Reverse — changes each character on your screen to its inverse without instructions or example programs.
TAPE ROUTINE — provides a system WAIT condition until a signal is received in the cassette ear jack — many uses!
All these routines are written in machine code and together take up only 16K BYTES of your previous RAM — an incredible achievement!
The price of incredible tool ONLY £2.95 (\$7.95) for cassette, including FULL instructions and example programs.
ALSO available 16K version ONLY £4.95 (\$9.95) which includes all the above PLUS GOTO's and GOSUB's included in the routines.
Search for and hit every line containing specified character.

16K VERSION

As reviewed in "YOUR COMPUTER" March 1982
16K RAM PACK
£29.95 (\$59.95)

Quite simply the best available
+ FREE "Alien Attack" (7K-M/Code) on cassette — value £5.75.

Fully built, tested and guaranteed.
Uses existing power supply (min. 600 m.a.).
Compatible with printer.
No wobble problems.
Gold plated edge connector for perfect contact with your ZX81.

Normally despatched within 10 days of receipt of your order.

AND NOW — 64K RAM PACK

Same quality as the 16K to give massive memory to your ZX81.

£62.95 (\$125)

NEW GRAPHICS TOOLKIT (Another masterpiece by PAUL HOLMES)

22 exciting MACHINE CODE routines that give you control over your screen as never before! (ZX81 - 16K RAM ONLY)

SCROLL facilities
UPSCROLL
DOWNSCROLL
RIGHTSCROLL
LEFTSCROLL
Scroll your screen in the direction indicated.

ONSCREEN OFFSCREEN turns your screen on or off.

BACKGROUND ON/OFF fills your screen by your specified character. When foreground is on existing information is unaffected and shapes will appear to pass in front of your background, without deleting it.

SEARCH AND REPLACE will search the screen for every occurrence of the character you specify and replace it with your new character.

SQUARE draws a square or rectangle from your specified co-ordinates.

ALL these routines are in machine code for SUPER FAST response! Simply load GRAPHICS TOOLKIT, which repositions itself at the end of your RAM, and then your own program for key in a new one! GRAPHICS TOOLKIT uses only 2K of your RAM and that includes space to load the program's TOOLKIT described above (16K RAM version).

UP After your next PRINT position in the direction indicated.

DOWN After your next PRINT position in the direction indicated.

LEFT After your next PRINT position in the direction indicated.

RIGHT After your next PRINT position in the direction indicated.

EDITPRINT Moves next PRINT position to first edit line.

REVERSE Converts all characters to their inverse video, control as in FILL.

PRINT POSITION CONTROLS
UP
DOWN
LEFT
RIGHT

ALL FOR ONLY £5.95 (\$11.90) This includes a cassette with 2 copies of the program plus a comprehensive instruction booklet with examples.

NOTE: All prices are fully inclusive — send cheque or P.O. to JRS Software at above address.

OVERSEAS CUSTOMERS Payment may be made in Sterling (Money Order available at your bank) or U.S. (\$ U.S.A. customers only).

PLEASE NOTE Prices quoted above are also export prices and include AIRMAIL postage.

INTELLIGENT **ATOM** TYPEWRITER

Dave Berry's machine-code program for the Atom transforms your Acorn into an intelligent typewriter with many of the features of a word processor.

MOST REGULAR users of typewriters and word processors have probably long felt the need for a facility somewhere between the two. It would be useful to be able to edit each line of text before it is printed, since most typing errors are noticed immediately after they are made. Justifying the right margin for neatness, but without the overheads involved in true word processing would be another boon.

Word processors are ideal for reports and such like but for the simple letter, the extra work involved in setting up files and storing text before it can be printed is a distinct nuisance.

"T" fills this gap between typewriters and word processors. Written entirely in 6502 machine-code for the Acorn Atom it is both fast and compact, filling just 767 bytes of

precious RAM. Nevertheless, it is able to support all the following functions:

- Edit before print.
- Right-margin justification.
- Adjustable line spacing.
- Key-blip routine.

The listing shows the Basic and assembler source-code version of "T". This listing has *(continued on next page)*

ZX81 ECONOMIC KEYBOARD £11.95

Individually handmade and thoroughly tested before dispatch, unconventional but practical,

A SINCLAIR USER'S ANSWER
TO A SINCLAIR USER'S PROBLEM

It's reliable, enjoyable and inexpensive; and it comes with a money-back guarantee if you don't agree.

It is NOT a full-sized typewriter keyboard with full-travel keys to be wired up in some way to your computer.

IT IS:

SIMPLICITY ITSELF TO ATTACH fitting directly onto Sinclair's flat keyboard
NEAT AND UNOBTRUSIVE, in no way interfering with any other expansion
SURE IN KEYSTROKE
FAST AND EASY TO OPERATE
ATTRACTIVE TO LOOK AT

IT HAS:

A SLIM BLACK BOARD with
ENLARGED AND RAISED KEYS which are
COLOUR-CODED AND EASY TO READ, and offers
SWIFT LOCATION OF FUNCTIONS etc.

MAKE YOUR ZX81 A REAL PLEASURE TO USE

An advanced spreadsheet program for the Sinclair ZX81 with 16K RAM.

This versatile software allows manipulation and inspection of data in the most convenient way ever. Ideal for financial planning, personal budgeting, cashflow analysis and countless other business, home, scientific and technical applications.

The screen acts as a window on a much larger grid (up to 38 x 38) of titles and numbers (up to 9 digits). Change one number or formula and all dependant results change automatically. Save on tape or printout for a permanent record.

Tasks that would take hours with pencil, paper and calculator can be performed in seconds with COMPUTACALC ZX.

For cassette and full documentation send £7.95 to: Silicon Tricks, Dept YC9, 2-4 Chichester Rents, London WC2 1EJ. (Tel: 01-603-6074).

THE PERSONAL COMPUTER GUIDE TIM HARTNELL

The Complete Handbook to Selecting and
Using Small Computers

A unique introduction to the exciting world of personal computers, including:

- ★ An explanation of how they work and what they can do for you
- ★ A detailed analysis of the available systems including the BBC, Commodore and Sinclair models, examining specifications, commands, software and other vital information
- ★ How to get the most out of your computer
- ★ A step-by-step guide to programming
- ★ A complete set of over 40 programmes
- ★ Written by Tim Hartnell, the U.K.'s leading authority on small computers

Packed with ideas and fully illustrated with photographs, line drawings and information panels. **ONLY £5.95**

A large format quality paperback
Available from all good bookshops

If you want to live to fly another mission, you will have to use your B-52's high-explosive bomb-load to save you. S A Nicholls puts you in the bomb-aimer's seat with his machine-code ZX-81 program.

YOU ARE AT the controls of a B-52 bomber which is rapidly losing altitude. Your only hope of a safe landing is to level the ground beneath you by shooting away the towers which block your path. Survival depends on clearing a safe landing strip for your bomber.

The game is in machine code and has been written for the 1K ZX-81. It is only suitable for a ZX-81 with less than 3.25K RAM. The display occupies the bottom 15 lines of the screen, and is of the wrap-around type. That means the aeroplane is on screen at all times. It does not disappear on reaching the right-hand edge only to reappear moments later complete on the left-hand side as in some machine-code programs.

The jet appears at the top left of the display with 55 shots displayed on its body. The shots can be fired at any time by pressing any key except shift, and may be fired singly or in a salvo depending on the length of time for which the key is depressed.

Point of contact

The shots travel at twice the speed of the plane in a 45° downward direction and on hitting a tower will destroy it from the point of contact to the ground. The counter on the side of the B-52 will count down with each shot fired. To simulate the jet propulsion, the

exhaust is changed from a hyphen to an asterisk with each move of the aircraft. The towers are random height and random characters to give a different game every time.

The program is written for a line 1 Rem statement containing 287 zeros. When you have written this Rem statement, enter the following hexadecimal-loader program.

```
10 LET X = 16514
20 LET A$ = ""
30 IF A$ = "" THEN INPUT A$
40 IF A$ = "S" THEN STOP
50 POKE X, 16 * CODE A$ + CODE A$ (2) - 476
60 PRINT AT 11,7,X; "SPC", A$(1 TO 2)
70 LET X = X + 1
80 LET A$ = A$ (3 TO)
90 GO TO 30
RUN (IN FAST)
```

You can now enter the hexadecimal codes as in the listing, either in pairs or blocks, i.e., 80 Newline — 80 Newline — 92 Newline or 8080922121A90100 Newline and so on. Remember there are no spaces between the codes. The hexadecimal-loader program will give a display of the last address and code entered so that you can check the listing as you enter it.

I prefer to run it in fast mode because the screen flicker does give an indication that an entry has been made without having to look up from the list to check.

After the last entry, at address 16800, enter S to end. Now type the only line of Basic necessary:

```
10 RAND USR 16520
```

and delete lines 10 to 90 as these are no longer required. The ROM subroutines used are located at the same address in both the old and new 8K ROMs.

Once upon a time . . .

. . . in medieval days, there were dark, mysterious Forests, and within these Forests there lived mythical monsters called DRAGONS.

Now in 1982 when buying a computer you enter a technological Jungle; here within this jungle you will also find Dragons. But these Dragons are no myth.

DRAGON 32

ONLY
£199.50 plus
£3p/p

The heart of the system is a 6809E micro-processor, a great advance on the still popular 6502, with a 32K Memory as standard, expandable to 64K. Uses Extended Microsoft Colour Basic, 9 colours available, 5 resolutions of graphics up to 256 x 192, displayed on TV set or composite colour monitor. Generates a full five octave sound range through the TV Speaker. Unlike other systems in this price range it uses a conventional QWERTY Keyboard.

Standard connections include:—
 ROM Cartridge
 2 Joystick controllers
 Remote cassette unit
 Centronics Parallel printer

160 page "BASIC" Manual included with every system.

All this for the unbelievably low price of only £199.50 inc. VAT, plus £3.00 p. & p.

ZX81

16 K SOFTWARE

ADVENTURE 1£6.00

The ZX81 generates a random maze of 100 caves. Choose which of two caves to start from. You must find 30 treasures in the caves. Unfortunately you can only carry 6 at once. You must find the exit cave, if you're lucky a singing goblin might tell you. Beware of the Troll, he wanders around looking for you. The evil magician will turn you into a silicon frog if he finds you. A maximum of 8 caves to choose from when moving. Go counter. Game save option. £10 first finishing prize.

CASSETTE DESIGN£5.00

Create and LPRINT your own cassette case designs. 24 lines by 32 columns. Design supplied with fold indicator. Save option.

AS/DIS£5.00

You no longer need type in long REM's Hex loader, Hex dump, Hex clear, Hex save, USR run. A REM is reserved with 693 spaces in it. To load in your Hex just type starting address, a space then your Hex code-hit newline and sit back. To check on your code use the Hex dump. Enter start address, finish address and then watch it scroll up. Code no good? Hex clear will clear the REM between two addresses. USR run will run the machine code from a given address.

Prices include P + P.

MORE MEMORY FOR YOUR ZX81 OR SPECTRUM!

Stand 249

NEW!

32K RAM FOR SPECTRUM

A full 48K of memory for the 16K Spectrum — simple D.I.Y. installation by just undoing 5 screws and plugging in! "State of the art" technology — advanced design using fewer ICs for high performance, reliability and economy.

ONLY £42.50 plus p & p.

MEMORIES FOR THE ZX81

The Downsway 64K Memory* slots directly on to the computer, without needing an additional power supply, or adding any extra load to the internal 5v regulator. Trade in your old 16K RAM Pack (any make, any age, any condition) for £12.50 against a Downsway 64K Memory to bring the price down to only **£47.45 plus p & p**. Without trade-in, it costs just **£59.95 plus p & p** — still incredible value!

If you only want 16K of memory for your ZX81, the Downsway 16K RAM Pack offers the same benefits of high quality and low price at only **£24.95 plus p & p**.

Both memories measure only 2½ x 1½ x 1in. and are supplied with a foam cushion strip to provide added mechanical stability.

* Reviewed in ZX Computing Aug/Sept 1982 and Popular Computing Weekly 22/7/82.

Naturally Downsway add-on memories are fully tested and guaranteed, but should you be dissatisfied for any reason, just return the memory within 14 days for a full refund (and your old 16K RAM pack, where appropriate).

Please allow up to 28 days for delivery.

To: Downsway Electronics (UK) Ltd
Dept. M, Downsway House, Epsom Road,
Ashted, Surrey.

The specialists in internal plug-in memories for ZX computers announce:

80K SPECTRUM

now attainable for the price of a 48K model!! with our SP80 low-power Sinclair look-alike.

Functionally identical to the Sinclair 32K internal plug-in expansion but with double the capacity (64K) the SP80 plugs into the sockets provided on the 16K SPECTRUM by Sinclair for his 32K expansion board. Instructions to our usual high standard makes fitting very simple indeed. The SP80 in no way interferes with Sinclair add-ons — ZX Printer, RS232 interface, Microdrive ...

New low prices on our highly successful internal memories for ZX81 to: East London Robotics, 'Finlandia House', 14 Darwell Close, LONDON E6 4BT.

Item	Item price	Quantity	Total
CHIPSWITCH kit doubles your ZX81 memory to 2K (this kit requires soldering)	£4.70		
INCREMENTAL internal 2K plug-in memory extension for ZX81 expandable to 16K	£17.75		
Additional 2K chips for above (HM6116P-3)	£4.50		
MAXIMEM 64K internal plug-in memory for ZX81	£49.95		
MINIMAX 16K version of MAXIMEM upgrade-able to 64K with our chip exchange service	£34.95		
SP80 64K internal plug-in memory extension for ZX SPECTRUM giving 80K of user RAM	£50.00		
SP80 Kit version with full instructions	£44.00		
SP80 fitting service (price includes excess p&p)	£9.00

The BBC *User Guide* seems somewhat inscrutable when it comes to defining some of the listed commands. Mark Holmes fills in the gaps with details of the operating-system calls. And for readers interested in creating their own graphics, Ian Thomas takes us on a tour of the BBC's special effects department.

USER-D

THE MANY POWERFUL routines built into the BBC Micro's operating system can be used for spectacular effects. One of these functions enables you to define characters to resemble anything you desire. This means that it is possible to display graphics in any mode — except for the teletext one.

This is very useful when writing a graphics game which is required to be relatively fast. The Print Tab function displays many individual graphic characters, such as space invaders, whereas the Plot command has to Plot many individual dots to build up a single character. One disadvantage of using defined characters for graphics is that all the graphics have to be in a single colour.

Any character with a code between 224 and 255 can be defined by using the VDU 23 command. VDU 23 is followed by the code of the character to be defined and by eight numbers which, in binary, represent the dark and light dots of the character. The first of the eight numbers represents the top row of the character and the eighth number represents the bottom row. Therefore the character has an eight-by-eight dot matrix.

The easiest way to find these eight numbers is to take a grid of eight by eight squares and

CALLING THE OPERA

HIGH ON THE list of the *User Guide's* inadequacies is its lack of information on the various calls to the operating system via its command-line interpreter. I studied version 0.10 of the operating system stored in EPROM to glean the details of the system commands.

The version of the operating system resident in a machine may be checked by typing in

*FX0

to which the computer will respond with the operating-system version number and its storage medium.

If you examine the operating-system code, you will see that the following commands will be recognised by the command-line interpreter.

*CAT
*DISC
*DISK
*DEBUG
*EXEC
*FX
*KEY
*LOAD
*MOTOR
*NOTAPE
*OPT
*RUN
*SAVE
*SPOOL
*TAPE
*TV

Some of these commands are adequately described in the *User Guide* but many will be new

to most users. The full set of commands indicates the care and consideration which obviously went into the design of the micro and its operating system.

The commands *Disc, *Disk and *Net clearly allude to the switching in of expansion options available. When these commands are typed in, they return with a message reporting the non-availability of these filing systems. *Notape switches out the tape filing system. After typing in this command, any attempt to manipulate tape files will cause the "No filing system available" message to be printed out.

The *Exec command is described in the *User Guide* and allows a text file on tape to be read in via the screen just as if it had been typed in at the keyboard. What is not mentioned is the complementary command *Spool which allows text files to be created. This command causes all text displayed on the screen to be written to a tape file which, when *Executed, will repeat that output. For example:

```
10 *SPOOL"KEYS"
20 PRINT""KEY0RUN | M"
30 PRINT""KEY1LIST | M"
40 PRINT""KEY2VDU7 | M"
50 PRINT""KEY3WAKE UP"
60 PRINT""KEY10WHO PRESSED BREAK"
70 *SPOOL
```

The *Spool closes the current output file and so winds up the output file "Keys".

Having created the text files saving your

favourite soft key definitions, they may be "loaded" by typing in

*EXEC"KEYS"

The *Spool command may also be used to save a typing session or a program listing which appears as screen output. For instance, using the previous example in program memory, type in the following

*SPOOL"KEYSPROG"
LIST

to which the computer responds with a listing of the program.

*SPOOL

*Execution of this file will retype in the program. A slight element of untidiness emerges with this example when the List and *Spool commands generate syntax errors.

One of the great beauties of this facility is that subroutines, or procedures, and functions likely to be useful in a number of programs can be stored on tape in this form and entered into each program as required.

To close a file created by the *Spool command

CLOSE#0

may be used instead of *Spool. Close#0 will close all output files currently active and may be used as the output terminator in the previous examples.

The 50 or more *FX commands are followed by a number and optionally a pair of parameters. The *FX command is an elegant way of calling subroutines from the operating

```

Figure 1.

draw your character on this. Start with the top row of eight squares. Add 128 for a dot in the first column, 64 for a dot in the second column, 32 in the third, right the way to 1 for a dot in the eighth column. Repeat this process for each row of eight, and you will have the

eight numbers for the VDU command. Figure 1 shows this process for the space invader to be used in program 2.

For this invader to be character 255 the command is:

```
VDU 23,255,40,124,84,124,254,186,146,0
```

Here is a simple program to illustrate this:

```
10 MODE 5
20 VDU 23,255,40,124,84,124,254,186,146,0
30 PRINT TAB(10,15) CHR$(255)
```

If you enter and run this program you should see a space invader appear in the centre of the screen. Try changing the last eight numbers in the VDU command to create some of your own characters.

In line 30 of the program the Chr\$ function is used to Print the character, but this is not vital. Instead of using Chr\$, the program could be run without line 30 and the character could be printed by:

```
PRINT CHR$(255)
```

Line 30 could now be entered, but instead of the Chr\$(255) quotation marks could be used, and the character could be copied into the in by the cursor control and copy keys. The line would now read:

```
30 PRINT TAB(10,15)""
```

where the asterisk represents the character which has been defined. Unfortunately the character definitions are not remembered when the program is saved, so the command must appear within the program, and must not be erased once the character has been defined.

Program 1 uses character definition to create a complete set of chess graphics, printing them out as it does so. Program 2 is a simple Space Invaders game which uses defined characters mainly because ordinary graphics and Plotting would be much too slow without resorting to complicated assembler routines.

This second program also uses the sound command, which I mention here because the syntax for this command is not included in the provisional manual which is at present supplied with the computer.

After the command Sound are four numbers which determine what the sound is like. The first number specifies the channel. This must be a number between 0 and 3. Channel 0 is a channel which only produces white noise, so it

(continued on next page)

ATING SYSTEM

system. A few of the available FX commands are described in the *User Guide*, but here are a few which are not:

- *FX9,n Sets flash period of first colour of a flashing colour.
- *FX10,n Sets flash period of second colour.
- *FX11,n Sets auto-repeat delay for keyboard.
- *FX12,n Sets auto-repeat rate.
- *FX11,0 Will switch off the keyboard auto-repeat.
- *FX12,0 Restores the auto-repeat default values.

Operation of the cassette motor relay is allowed independently using the *Motor command. *Motor1 closes the relay and *Motor opens the relay.

Anyone like me who has spent hours trying to adjust his television set so that the VDU display sits squarely inside the screen with the top line of the display actually visible will curse Acorn for not explaining the *TV command.

This command allows the VDU display to be moved up or down the television or monitor screen. Typing in *TV1 followed by a Mode statement will restore the line previously lost off the bottom of the display. *TV255 will move the display down one line thus restoring the missing top line when the Mode is next changed. 255 represents -1 in a two's complement representation; 254 is -2, 253 is -3, etc.

The screen may be moved up a maximum of three lines and down considerably further

depending on the vertical hold properties of the television being used. A parameter may also be passed with a *TV command to turn off interlace in Modes 0 to 6 inclusive. For example, *TV0,1 will turn off interlace.

A value of 1 will turn off interlace and 0 will restore interlace. Interlace, for those who have not encountered it, is a technique by which characters can be rendered less angular by drawing each scan line of the television alternately between adjacent scan lines of the screen.

The effect is to move the entire screen up and down rapidly by about 0.5mm. In practice, I find that I can hardly notice if interlace is on or off. In Mode 7 interlace cannot be turned off by this method. Teletext hardware relies on the fact that interlace is on.

The *OPT command is briefly mentioned in the *Guide*. Typing in *OPT1 or *OPT1,0 switches off all messages from the filing system and *OPT restores them. *OPT1,2 expands the information contained in the tape filing system messages so that on reaching the final block, the start address of the file is printed and the execution address specified by a *Saved program — a Basic program or a text file repeats the start address in this field. The default option is *OPT1,1.

The *Debug command has eluded all attempts to fathom its purpose. It has a most promising title and I look forward to hearing from anyone who can tell me about it.

(continued from previous page)

cannot be used to produce clean notes.

The second number specifies the volume of the sound. This can be any number between -15 and 0. The loudest is -15 and the quietest is 0. The third number specifies the frequency of the sound. This must be in the range 0 to 255, and unfortunately bears no resemblance to the frequency of the sound produced.

The fourth and final number specifies the duration of the sound, in the same way as the duration in the Inkeys command. A 1 for this number specifies one-hundredth of a second, so to find the duration in seconds divide this number by 100.

All of the channels can be played together, so chords are possible, but one channel can play only one note at a time. When the interpreter encounters a Sound command it stores it in a buffer until the sound generator has finished playing the previous note.

The Sound command is used in the program as a warning noise at the start of the game, and to infuriate you, when the game is over, with a horrible low-pitched noise.

Lines 30 to 70 define the characters to be used in the program. Character 255 is the missile base, 254 is the bomb or missile, 253 is the invader and together 252 and 251 make up a UFO.

Lines 110 to 130 produce the warning noise in channel 1. In line 150 an asterisk represents an invader — Chr\$(253) — which must be copied into the line by use of the cursor control and copy keys. There are eight invaders and nine spaces in line 150, making 17 characters for A\$(I).

You may be puzzled by line 270, *FX15,0, which clears the input buffer. This is needed because the BBC computer remembers what you type in, and if you keep your finger on a key for too long without this command you would have to wait a long time before the program recognised that you were pressing another key.

In lines 340 and 350 logical operations are used. If what appears within the brackets is true then the value of what appears in the brackets is equal to -1; if it is false then it is equal to 0.

When you run the program you should hear the warning noise, then the invaders appear. These must all be shot down before they reach the bottom of the screen. For each invader you shoot down a random score of between 100 and 500 is added to your total. Your total score is displayed in the middle of the top of the screen. When you have succeeded in shooting all 40 invaders another 40 appear, and the game gradually grows faster as you progress. At random intervals a UFO moves across the top of the screen. If you shoot this down you get a bonus of 1,000.

Invaders drop bombs randomly. If one hits your base you lose one of your three lives. The number of remaining lives is displayed at the top right of the screen. The game is over when you have no lives left, or if the invaders reach the bottom of the screen. You cannot shoot down bombs which have been dropped, nor can you shoot if you have a missile still in play. To move your base press the Z to go left and M to go right. To shoot a missile press V. ■

ZX 80/81 Hardware SPECTRUM Software

ZX KEYBOARD

The case is large enough for both the computer (81 or Spectrum) and the power supply to fit inside. Requires no soldering

Also suitable for Spectrum
REQUIRES NO SOLDERING

Fully cased with numeric pad £45
Uncased with numeric pad £30
Case £15

NEW FROM dk'tronics

- (A) 16K Ram Massive Add On Memory Fully assembled and tested £19.95
- (B) 64K Memory Expansion £49.95
- (C) 4K Tool kit full of utilities to aid the programmer in constructing and de-bugging E. Prom version for use with graphics Rom £9.96
- (D) Flexible ribbon connector (as illustrated) £10

The DK Graphic module is our latest ZX81 accessory. This module, unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you an unbelievable 448 extra pre-programmed graphics, your normal graphic set contains only 64. This means that you now have 512 graphics and with their inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left that may give you an idea as to the scope of the new ROM. However, the module does not finish there; it also has a spare holder on the board which will accept a further 4K of ROM/VRAM. This holder can be fitted with a 1K2K/VRAM and so you can create your own custom character sets.

£29.95

THIS ASSEMBLER was developed on a Vic-20 with 16K RAM pack. The program occupies slightly less than 9K but requires more than 13K to run. I have found that the best way to store the assembled code is near the top of memory — locations 53 to 56 on the Vic — Poked low because string variables grow downwards and can interfere.

Although it has been written on a Vic, it can be entered on a Pet with no alterations at all, and with little alteration on most 6502 micros. The source code is entered as if it is a Basic program — that is, each line has a line number and the assembler sorts these into numerical order. The lines are input to the machine by opening a file to the keyboard. This means that there is no “?” prompt, and also enables screen editing.

To list your whole program, type List and press Return. The program is then displayed 15 lines at a time. After each section press E to stop listing, or any other key to continue. Do not press the Stop key as you will break out of the assembler, not the listing.

Other direct commands are as follows:

LISTx	will display the program as above, but beginning at line x.
NEW	clears your program.
ASSEMBLE	displays a hexadecimal assembly of your program.
ASSEMBLEM	as above, but also loads the machine code into memory, as specified within the source code.
SAVE “program name”	outputs the source code to tape as a file named “program name”.
LOAD “program name”	loads “program name” from tape.
*SAVE “program name” x-y	saves memory from location x to location y and names it “program name”.
*LOAD “program name”	loads “program name” into memory, returning start and end addresses.
DISASSx	disassembles from location x, codes as for the assembler. One screen is displayed at a time. Hit E to end or any other key to continue.
?Hx	returns the hexadecimal value of the denary number x.
?Dx	returns denary value of hexadecimal x.
END	exits the assembler.

Commands are not altogether standard, and spaces are very important — they enable the main assembler routines to split each line into its different sections. Necessary spaces are marked here as [S]. Numbers can be entered in three different forms — as labels, denary or hexadecimal numbers. Labels are preceded by a full stop, and hexadecimal numbers by a \$. Labels can be defined as follows:

```
10DL[S] SCREEN[S] 4096
```

This defines a label called Screen, and sets it equal to the denary number 4096. Alternatively:

```
20.LOOP[S] STA[S] .SCREEN
```

On reaching this line, the label Loop is set equal to the location of the command follow-

VIC-20

ing — the Sta command. Also, the label Screen would on assembly by 4096, be substituted. You are not confined to calculating your own location values. Up to 10 numbers or can follow the commands. For example:

```
20.LOOP[S] STA[S] .SCREEN+$FF-200
```

This will be calculated by the assembler to give 4151 denary.

To enter a series of letters or graphics, the Byt command is used. This has two alternatives:

```
10 BYT 'THIS IS A TEST
```

The apostrophe before “This” tells the assembler to use ASCII codes.

```
20 BYT PTHIS IS A TEST
```

The P tells the assembler to use CBM screen codes. Branching can be done to either a label or a specified location.

To specify the load location the “*” command is used. For example,

```
10 * = s 675
```

continues assembly from 675 denary.

```
50 * = s $fff
```

continues assembly from fff hexadecimal. The last line of the source code must be an End command, otherwise the program will loop indefinitely.

For absolute addressing the mnemonic is typed, followed by a space and then the

location — number or label. For example:

```
10 LDA[S] SCREEN
```

In immediate addressing, the mnemonic is typed, followed by a #, a space, and then the number or label. For example:

```
10 LDX# [S] 200
```

For absolute indexed addressing, the index register to be used is placed immediately after the mnemonic, then a space, then the location. For example:

```
10 LDAX[S] 1000
```

```
20 INCY[S] .LOC
```

With zero-page addressing, a Z follows the mnemonic, before any index register:

```
10 LDAZ[S] 100
```

```
20 DECZX[S] 100
```

In indirect addressing, the index register required is placed in brackets after the mnemonic:

```
10 LDA(Y)[S] 100
```

```
20 STA(X)[S] 150
```

An indirect jump has an I in brackets:

```
10 JMP(I)[S] 2000
```

For accumulator addressing, the shift and rotate instructions to be carried out on the accumulator are followed by an A:

```
10 LSRA
```

```
20 ROLA
```

Here are the main sections of the program:

10 to 70

read mnemonic data and number of bytes per command.

100 to 440

run through your program and supply each line with its memory

ASSEMBLER

This 6502 assembler, written by Philip Horton, is not solely applicable to Vic machines. Numbers can be entered as denary, hex numbers, or as labels — and you are not confined to calculating your own location values.

```

(continued on next page)

location, and also set up any labels — either defined or from a full-stop command.

450 to 1400 assemble your program, into memory if required. These lines include:

740 to 840 denary to hex converter for numbers up to 65535 — FFFF.

1010 to 1040 hex to denary converter.

1290 this line converts a letter or graphic into CBM screen Poke codes.

1410 to 2190 contain the input routine which accesses all other parts of the assembler.

2200 to 2380 one subroutine used by all parts of the program to convert the string T\$ to a denary number. It is returned as T\$.

2450 to 2660 are where the disassembler is accessed by the input routine.

2660 is where the CHR\$ commands open inverted commas and then delete them. This prevents, for example, a clear screen command from interfering with any printout.

2670 to 2890 are the subroutines which output memory to tape and vice versa.

2900 to 3150 hold mnemonic data and data to give the number of bytes required by each command.

Now here are the variables:

A\$(n) 6502 mnemonics.

A%(n) number of bytes required by each of the commands.

L\$(n) each line of your program.

C\$(n) the command on each line of your program.

D%(n) the location of each line of your program in memory.

Each of the last three arrays are Dimensioned to 200 elements, but this can be altered as required, by changing line 10.

NL the number of labels so far encountered.

LA\$(n) the names of the above labels.

P(n) the location in memory of each of the above labels.

The label arrays are Dimensioned to 50 elements, but can also be altered as required at line 10.

L\$ the line that the input routine is currently working on.

N the number of lines in your program.

DN denary number for conversions.

H\$ hex number for conversions.

LA flag used to give "Load on assembly".

C counter used to control the position in the line of program that the assembler is dealing with.

ER error report flag, to give a line number after an error in the source code.

SC the number of lines so far printed on the screen for List, Disass, etc.

Finally, here are the error reports.

SYNTAX A direct command has not been understood.

ERROR There is a mistake in line x of the source code.

SYNTAX ERROR IN x The label defined in line x has already been used in the code.

LABEL REP-EATED IN x The label mentioned in line x has not been defined.

NO SUCH LABEL IN x The user has tried assembling with no code in the memory.

NO CODE ERROR

ZX81 EDITOR

FOR ALL ZX81 PROGRAMMERS

Based on the editing facility available on a DED system 10 mainframe computer the ZX81 EDITOR provides 7 powerful editing functions for the 16K ZX81.

Demonstration program:
5 LET A\$ = "VT4:ZA9EPKN>7QUZJKS"
10 LET B\$ = ""
15 FOR N = 1 TO 19
20 LET B\$ = B\$ + CHR\$(CODE A\$(N) + PEEK 256)
25 IF N = 5 OR N = 16 THEN LET B\$(N) = ""
30 PRINT B\$
35 NEXT N

MERGE

Combine editor with any other program. Option to continue combining indefinitely; available RAM only limitation.

RENUMBER

"R increment"
eg) "R 10"

SUBSTITUTE

"S old text\$new text\$line no"
eg) "SN\$X\$15:35"

EXTEND

"E line no"
eg) "E 5"

Prints out the line so far with the cursor at the end ready for you to extend or edit.

TRANSFER

"T first line no, last line no:new first line no, increment"
eg) "T15,35:100,1"

DELETE

"D line no:line no" Delete any block of program.

SCROLLED LISTING

"S line no" Continuous scrolling list starting at beginning of program unless otherwise specified. Listing can be stopped at any time for editing.

All standard editing functions provided by Sinclair can be used as normal. Quality cassette + full documentation

for Only £5.50 inc VAT + p & p

NEW ZX PRODUCTS FROM PRINT 'N' PLOTTER

ZX GRAPHICS PROGRAMMING MADE EASY
Professionally-produced full colour A4, 24 page Manual packed with ZX Graphics Programming techniques Information Graphics Sketchpads. Saving your 'Art' Graphics Stringing and ZX Printer Graphics.
Only £1.50

Illustrated at every stage

ZX PRINTER PAPER £10.95!

GOOD NEWS FOR PRINTER OWNERS

ZX PRINTER PAPER
Five rolls of Printer paper – identical to Sinclair's but a quid cheaper! each roll is approximately 65 feet long – excellent printing standard ... fast delivery
£10.95 for 5 rolls.

Also available:

Print 'n' Plotter Jotters – 100 pages of Print and Plot grids in fully-bound Pad. only £3.50.
Print 'n' Plotter Films – The re-usable transparent film version of the Jotter ideal for copying graphics from photos, illustrations, charts etc only £2.25.

Post today to: Print 'n' Plotter Products (Y7) 19 Borough High Street London SE1 9SE (or detail your requirements in a letter).
Please forward me

Manuals @ £1.50 each.
Packs of Printer Paper @ £10.95 each.

David Horne's ZX-81 disassembler prompted many readers to ask for a similar facility for their new Sinclairs. Now you can disassemble your Spectrum.

David Horne's ZX-81 disassembler prompted many readers to ask for a similar facility for their new Sinclairs. Now you can disassemble your Spectrum.

SPECT DISASSEN

THIS SPECTRUM disassembler is based on the ZX-81 disassembler that appeared in the July issue of *Your Computer*. The method used for creating the long Rem statement is repeated and the use of tables to point to commands is also retained. I know from your letters that

many of you have already successfully produced a Spectrum disassembler from the original article, but for those who did not, here is how to do it.

We use three tables to decode the machine-code listings. The first table in Rem 1 points to the mnemonics of the assembly language in Rem 2 and Rem 3. Figure 1 shows a typical output and figure 2 shows how the output was achieved. The first character of Rem 1 points to the command table Rem 2 and the second and third characters point to the extension table Rem 3.

The initial problem is to produce the first Rem which contains 768 bytes. Create Rem 1 with 100 characters — see figure 3. Edit the line number to create REMs 2 to 7 inclusive. Then type Rem 8 with 26 characters. It helps if you Poke 23609, 255 first.

8 REM 123 . . . 3 4 5 6 (26 characters)
Save the code produced so far by Save "1". To
check, type

PRINT PEEK 24528

This should give the answer 13. Type in the following for one long Rem statement

POKE 23757, 2
POKE 23758, 3

Then type

2 REM
3 REM
LIST
POKE 23756, 0

to prevent editing this line and Save "2".

Next enter the data loader. Type:

```
2 For A = 23760 to 24527
3 Input B
4 Poke A, B
5 PRINT A ; TAB 8 ; B
6 NEXT A
```

Figure 6. Pointer table REM 1.

Figure 6. Pointer table *Reim1*.

Bytes table Rem 4

Number of parts to Z-80 op code

CB	IX IV	ED
All ones	All ones except	All ones
	034	3
	052	2
	053	2
	054	3
	070	2
	078	2
	086	2
	094	2
	102	2
	110	2
	112	2
	113	2
	114	2
	115	2
	116	2
	117	2
	119	2
	126	2
	134	2
	142	2
	150	2
	158	2
	166	2
	174	2
	182	2
	190	2
	203	3

The above takes into account the important Z-80 op codes to these parameters.

Figure 8.

Figure 2. Table operation.

(1)	29	39	41	==	LD BC NN	} check these on page 183 of your Sinclair manual.
(2)	29	36	42	==	LD bc A	
(3)	30	39	28	==	INC BC	
(4)	30	47	28	==	INC B	
(5)	31	47	28	==	DEC B	

Figure 1.

ZX Spectrum

The list is given in figure 6, but unfortunately only a small portion will be seen on the screen if the Rem is listed. When you have entered all the data, delete lines 3 and 4 and check by typing Run. Then Save "4".

[illegible]

```

1 REM 12345678901234567890123
45678901234567890123456789012345
567890123456789012345678901234567
8901234567890

```

Print PEEK 23760 should give 60.
Print PEEK 24534 should give 82. If not, table 1 is wrong.

[illegible]

When all is correct, delete line 5 and enter the program in figure 4. I have included a copy facility which can be substituted if you do not have a printer. Type

In the last part of this series, Tony Edwards explains the use of flowcharts in computer-language translation.

WHERE THE DIALECT of Basic to be translated is so alien to the one your machine uses, the kind of direct translation discussed in the previous articles in this series is difficult or impossible to apply. This is, of course, also applicable to translations from one language to another.

The method I shall use is to revert to flowcharting — that basic step in programming which we all know is essential, but which we usually manage to do without.

Our regular readers will have seen a form of flowchart in this magazine each month. It is heavily disguised as a puzzle and will be found

in *Your Computer's Competition Corner*.

The type of flowchart we will use is more stylised so that it can be more readily transformed into Basic, your dialect of the language. Once you have mastered the art, you should be able to change the Competition Corner puzzle into a stylised flowchart and then into Basic so your computer can solve it for you.

A flowchart is a number of symbols joined up by usually one-way paths. Different programmers use different symbols, but so long as they are consistent within a chart that does not matter. The symbols I use are shown in figure 1.

The start, stop, go to and from symbols are self-evident. The input and output symbols are graphic: they represent an input card and a roll of used copy output. The assignment

FLUEN

statement box is to contain a list of statements assigning values to variables or altering the value of variables.

These statements must be in a set order and contain no branching or double flows. They are just a series of operations to be undertaken in order. Branching takes place in the decision boxes. These contain a simple statement which can be answered "yes" or "no" and the path leading from the box is chosen dependent on the answer.

Only decision boxes have two paths away, but any type of box could have multiple paths leading to it. The cardinal rule is that at each part of the diagram there is only one path to take.

Let us produce a flowchart to play the game of noughts and crosses. My suggestion is shown in figure 2. If you prefer another one it does not matter. Provided there is only one path from each part of the diagram, all flowcharts are equally valid and there are numerous ways of arranging this game.

Check through this flowchart to see that it complies with the rules I have just set out. It is usual to number at least some of the boxes so that they can be referred to, but the sequence of these numbers has no significance.

The next step is to enlarge the boxes maintaining the structure of the diagram so that it adheres to the rules of your programming language. If you are not familiar with flowcharting, it is worth working through the whole chart to produce the Basic code for the game. Here I shall content myself with the boxes 1, 6 and 9.

I have decided to set up an array for the game board and will call it A(9). If your dialect does not have arrays use the variables A1 to A9. Figure 3 is the next stage of the flowchart and figure 4 is the final stage which is practically the code for the program. Work through these to see the logical connections. You will see that box 1 has been split into boxes 1.1 and 1.2 and the others likewise.

The final step is to write out the code with the correct Gotos and to clean it up. Eagle-eyed programmers will see that I have jumped out of a For-Next loop in 6.1 and 9.1, but my method of making this possible is in a previous article or you could use the methods shown in the listing of program 1.

```
10 DIM A(9) : DEFINT A-Z : RANDOM
20 R! = RND(0)
30 IF R! > 0.5 THEN 100
40 (input players move)
```

```
100 FOR I = 1 TO 9
110 IF A(I) <> 0 THEN 110
120 A = I : I = 10
130 NEXT I
140 A(A) = 1 : B = 0
150 FOR I = 1 TO 9
160 IF A(I) = 0 THEN B = 1
170 NEXT I
180 IF B = 1 THEN 40 ELSE (game drawn)
Program 1.
```

```
1000 IF A < 10 AND IF B < 0 THEN Z = 0
      ELSE Z = 1
1010 IF C < 100 AND IF Z = 0 THEN C = C
      - 100 ELSE Z = 1
1020 IF Z = 0 GOSUB 2000 ELSE GOSUB

NT BASIC

When then is this flowcharting to do with translation? Logic is two-way so that it is possible to change a language code back to a flowchart. Thus when faced with a piece of untranslatable code you should convert it into a flowchart then reconvert it into your dialect.

First a simple example. Program 2 is a small part of a complex program listing. If you do not have If-Then-Else and On-Go To statements in your Basic dialect you could have considerable trouble with the translation. However, it is easily converted to the flowchart at figure 5, and then to the listing in your dialect — for example, program 3.

It is listings like this which give Basic a bad name as an unstructured language, but at least with the help of a flowchart you can keep control of the logic, and can in many cases, including this one, improve on the flow of the program at the flowchart level before encoding it in Basic.

Now for a more complex example. If the

program you wish to translate is not in Basic, but in some other language it is not usually possible to translate directly as different programming languages have different structures. Nevertheless they are all developed, at least theoretically, from common flow diagrams.

Thus if we can convert the "foreign" language to a suitable flow diagram we can then convert the flow diagram to Basic. So let us try.

Program 4 is in the language Pascal. It is a program to simulate a dice throw. In this case it would be reasonable to reprogram it in Basic from scratch, but by way of an illustration we will flowchart it. Even if you do not know the language, or know it only slightly, it is usually possible to develop a suitable flowchart especially if you know what the program is intended to do. My flowchart from program 4 is at figure 6. Can you see the correspondence between the two?

For those readers not familiar with the basics of Pascal some explanation is in order. The Proc or procedure in Pascal is similar to a subroutine. In this simple example it is only necessary to flowchart the Proc as the rest of the program is just house-keeping, screen clearing Tabbing, and so on. The symbol $=$, unfamiliar to Basic users, is the assignment statement and can be read as "becomes". For example, $A := B$ means A becomes B. This is similar to $a =$ in Basic. The rest of the Proc is reasonably simple to follow.

Having arranged the flowchart we can forget its Pascal origins and transform it into Basic statements. I have resisted the temptation to simply replace it with

$10 P = \text{RND}(5) + 1 : ? P$

as this would not help you understand the technique. The flow diagram is simply a method of generating pseudo-random numbers using modular arithmetic and is encoded into Basic without difficulty — see program 5.

The only problem is with the box 4 statement $P = P(\text{Mod } 7)$, which is a standard, if obscure, mathematical expression meaning P is the remainder when P is divided by 7. For example, if P originally was 22 then $P(\text{Mod } 7)$ would be 1 as $P \div 7 = 3$ remainder 1. ■

COMPILING AN index is, at best, a long and rather tedious job. If funds do not run to a professional indexer, the author has to do the job himself. Traditionally, indexes are compiled on cards, which are sorted into order — just the kind of job which could be done easily on a computer.

The Indexer program was written to help me compile a short index for a book but could, of course, be used equally well for an index of records, tapes, or whatever you like.

Inevitably, the ZX-81's 16K memory places some limitations on what can be done. A balance must be struck between the facilities the program offers and the amount of space it leaves for the index entries. I ended up with a program of slightly more than 6K, including system variables and display file, leaving about 10K for the index itself. The way the program is designed allows a maximum of 340 index entries — enough for a large record collection, or for the index of an average textbook.

Using the program

Rather than describe in detail the way the program is constructed, I will begin by giving a set of instructions for using the Indexer. The program is intended to be as user-friendly as possible, and having used a number of expensive commercial software packages, I think it is as good as most. The use of Inkey\$ for commands justifies, I am sure, the small amount of extra memory used, compared with Input — which requires two key pushes instead of one.

Similarly, the program is difficult to crash, and rejects most kinds of incorrect entry. At least I have not yet found anything that can lead to loss of data. Finally, before the operator instructions, I should mention that I use a typewriter keyboard for the ZX-81, and Fast mode. This enables you to type at almost normal speed.

First, load the program from the tape under the name

"INDEXER"

The program will start with the menu. Select option 1 from the menu to start:

1 BEGIN NEW INDEX

This clears all previous data and selects entry mode for the index. The screen will show a heading marked "Entry" and "Page", and a number, 0, in the top-left corner.

Entries can be typed into the Indexer in random order. No entry can be longer than 27 characters, and no page number larger than 999. The maximum number of entries is 340.

Type in the entry, followed by Newline, then the page number, followed by Newline. The counter at the top-left will record the total number of entries. The program will automatically reject any entry that is empty, and any page number larger than three digits or starting with a non-numeric character. To delete incorrect entries before pressing Newline, use Rubout in the usual way. After Newline has been pressed you must use the Edit Index facility.

To return to the menu, key 0 as if it were an entry, not a page number. Note that entry mode returns to the menu via a sort routine that may take several minutes, depending on the number of entries.

2 KEY ENTRIES

This works in the same way as option 1 Begin New Index, except that existing data is not deleted. This enables you to continue adding to the index after saving and loading the existing entries. The counter records the total number of entries.

3 SAVE ENTRIES

Option 3 allows you to save the program and data on tape. Save time will vary according to the contents of the index, but you should always allow at least 10 minutes' worth of tape for saving.

The Indexer and contents is loaded from the tape with a Load "Indexer" command.

4 PRINT INDEX

Option 4 prints out the index on the screen or printer, merging identical entries and listing page numbers in numerical order. The index is printed out in strict alphabetical order, regardless of the order in which entries were keyed.

You are given the option to print on the screen or printer. When printing on the screen, the index is printed from the beginning in screen-sized blocks. Pressing any key moves on to the next block. When the last block is reached, an End message is displayed at the top of the screen; the next key push returns to the menu — it may take a few seconds for the menu to reappear. During printing, the computer operates in fast mode

ZX-81

for just over half a minute between screens.

If the printer option is selected the screen is not used. The printer prints out the index in blocks; computing time between blocks is just over half a minute. When the printing is finished, the screen displays the last block of the index and the End message. Any key returns to the menu after a short delay.

5 EDIT INDEX

Option 5 provides an editing facility. The index is listed, unmerged, on the screen. Cursor controls can be used to step through the index — the keys, without shift, can be held down for continuous stepping. The down-cursor control moves down the index eight lines at a time for rapid stepping through the index; the up cursor moves up one line at a time.

The lowest entry on the screen is highlighted with a cursor or inverse first character. This is the line affected by any editing. Key E

INDEXER

John Watson's Basic program for the ZX-81 means you can compile an index for your library of books or for your record and cassette collection.

for edit. The whole line can then be re-entered, as in entry mode. The line will appear correctly when either cursor control is moved.

Key D for delete, having made sure that cursor is at the line to be deleted. Note that you cannot fill the gap left by a deleted line while in edit mode: to insert new entries you need to go to option 2 Key Entries from the menu. Again, to return to the menu key 0. Remember that Edit mode also returns to the menu via what can be a lengthy sort.

In case of an accident, like keying Break by mistake, the program can be restarted by Goto 100. The printed index has gaps between each block of 10 lines or so; this is intentional, and improves legibility if the index is to be retyped.

It is not a good idea to enter all 340 entries unless you have to — after 340, the program leaves entry mode, and goes back to the menu, but with an unsorted list. To make it sort, go to Edit mode, option 5, then immediately key 0 to go back to the menu again through the sort routine.

How it operates

Here is how the program works. The index entries are stored in a string array, which is dimensioned as A\$(341,30). The last entry is not used, but is necessary for the program operation. CT counts the number of entries. The main menu is at lines 105 to 220.

Keying 1 goes first to a "do you really mean it?" message at 230 to 250, then redimension the array, deleting all data. It then goes into the main key entries routine at 496. This prints the heading and the current entry number, and warns when the index is nearly full. When the index is filled right up, the program returns to the menu — this is more helpful than going through the sort routine in the usual way, as it provides some idea of what has happened. Unexpectedly launching into the sort routine, with its several minutes' worth of blank screen, can make you think the program has crashed.

Line 520 goes to the entry-checking subroutine at 5010. The index entry C\$ is checked for an empty string, a blank first character, or for 0 which is the "leave entry mode" command. The page number B\$ is

```

(listing continued on next page)

(continued from previous page)

checked to see if it is empty, or if it starts with a non-numerical character. It did not seem worth checking all three figures, as this is not a mistake likely to be made during entry — forgetting to put in the page number is a possibility, but putting in an alpha-numeric page number seemed far-fetched. Anyway, you can pick it up during editing.

Lines 5070 to 5090 are interesting, as they range the page number to the right-hand end of the string holding the entry. The number is always held at the extreme end of the string so that it is sorted properly. Without ranging right, page 150 would be sorted before page 35.

Entry is always followed by a sort — at lines 8000 to 8260. Regular readers will recognise the excellent Shell-Metzner sort routine by David Lawrence, published in the April 1982 edition of *Your Computer*. Why rewrite a good program?

Option 5 on the menu, edit index, takes us to line 10 which prints out the index on the screen, and waits for a command from a secondary menu at 46 to 50 and 550 to 580. Line 40 prints the first letter of the entry affected by edit, in inverse. Up and down cursor controls work through the index, 0 goes back to the menu, and D deletes an entry, not forgetting to make the necessary correction to the entry counter, line 655.

Note that all the entries end up in the array in reverse order after sorting; CD is used to store the number that has to be subtracted from the total counter after editing is finished. The next sort — automatically after editing, line 690 — gets rid of the empty strings. Note line 650, which prevents re-deletion of deleted strings — this would upset the entry counting.

Option 4, print index, also includes the merging routine. The entries are merged only during printout, so that they are available for editing separately if required later. Since entries are printed from the bottom of the screen and moved up with scroll to place them in the correct order, there has to be some way of checking when a screenful has been supplied.

This is done by line 2010 which Pecks the second line of the display file to see if there is anything there. If there is, then the program either waits for a key push, line 2210, or Copies the screen, according to whether screen or ZX printer has been selected. The actual printing and merging takes place from line 2040.

Line 2040 prints out the entry, and if the string is empty — that is, it is the one after the last-used string — goes on to the winding up routines at 2260 which scrolls the entries up to the top of the screen to avoid an odd gap when the last part of the index is printed out.

If the string is not empty, the entry part is

stored in Z\$ and is compared with the same part of the next entry, line 2100, and just the number, preceded by a comma, from the next string is printed — line 2160 — if the next entry is identical. The subroutine at 3000 finds the print position for the page numbers, which should be just after the entry and not at the far end of the line.

Note that there are two Saves at the end of the listing. The one at 8600 should be used when you save the master copy of the program, with Clear and then Goto 8600. This saves the program without the string array — Save/Load time is about two minutes. The other Save routine, from 8500 to 8530, is used from the menu to save the program with the array, which takes far longer. If you do not know the "line 0" trick, do not bother entering the first Rem statement in the listing.

There is certainly room for improvement and the program is a good example of Basic spaghetti. It typifies the program that has been put together piecemeal, but on the other hand, it would have taken me far longer to write in any other language, because several points occurred to me during, rather than before, writing. Also, it badly needs a Renumber.

Obviously, owners of bumper-size RAM packs can store more entries. Each entry takes 30 bytes. To change the size of the array, you will need to alter lines 1, 10, 486, 505, 510, 605, 630, 2000, 2135, and 8040.

Very Important Cassettes

Educational

£8.95
plus 55p p+p

A.S.K. announce the first four programs in a series of educational cassettes for the VIC 20. These programs have been written by a team of teachers and professionally programmed specifically for use in the home.

They are of proven educational value, complementing work done at school, yet all the programs are designed to be fun to use – not just once, but over and over again. We believe that these programs will give you and your family and friends hours of worthwhile enjoyment. They will help your children to learn at home in a relaxed yet stimulating way.

We Want To Count. A program for young children learning to count which involves the numbers 1 to 5. Children often find it easier to recite numbers than to count things correctly. Four different games give the child a variety of objects to count, and are presented in an exciting and stimulating way. Suitable for children aged 3 and upwards.

Twister. A geometric puzzle that will tie you in knots, testing and improving your thinking skills and powers of concentration. The purpose is to rearrange coloured squares so that no row or column contains a repeated colour. Set your own puzzle and test the whole family. Suitable for children aged 8 and upwards.

Facemaker. This program is designed to help improve spelling, expand vocabulary and sharpen observational skills. There are thousands of characterful faces you can make with the program. Perhaps someone you know? Suitable for children aged 5 to 12.

Number Chaser. A car race provides an opportunity to practice and improve estimating and multiplication skills. You can choose the level of difficulty you want making it different every time you play. Suitable for children aged 5 to 12.

Each cassette comes in an attractively labelled box together with a colour booklet which gives detailed loading instructions and tells you how to use the program.

N.B. Because these programs make extensive use of computer memory and colour graphics, a 16K RAM PACK (or 8K RAM PACK for Numberchaser only) and colour T.V. are essential for their operation.

If you do not have a 16K RAM PACK, we will be pleased to supply one at the discounted price of £67.50 with your order for one or more A.S.K. programs.

NO QUIBBLE GUARANTEE

If you are dissatisfied with any A.S.K. program, return it to us within 7 days of delivery and we will give you a full refund without question.

Not convinced? Then see our programs at The Vic Centre, 154 Victoria Road, London W3, opp. North Acton tube.

2/YC9

THE SIMPLEST Z-80 processor command is Code 0. This means no operation and is intended to act as a delay, but we will use it initially as a fill-in command to space code out. It also assists in program fault-finding. Its use will be demonstrated later in the first example.

Remember that each piece of machine code is entered into its own address. We start at 16514 and we can jump to any address. That is called an "absolute jump". Alternatively, we can jump forward or backwards a small number of addresses which is known as a "relative jump".

So, if you are at address 16600, a relative jump forward of 50 would take you to address 16650, or we could jump backwards 50 to address 16550. One uses the same command for selective jumps whether they are forwards or backwards. For a backward relative jump, subtract the size of the jump from 256. For example, to jump four bytes backwards jump 252.

The relative jump commands are:

```
JR DIS    24  N
JR Z DIS  40  N
JR NZ DIS 32  N
```

Dis equals displacement and is in fact simply a number, N, between 0 and 255. These commands can be conditional on the state of the F variable, as are the absolute jumps.

Now for an example to demonstrate the use of these commands. Load program 4, which multiplies two numbers, into the Basic program given in program 1. What we will do initially is to change the absolute-address jump to a relative-address jump. After you have entered the program, add the following changes and save 4a.

```
POKE 16524, 32 ) JR NZ DIS
POKE 16525, 252 ) NOP
POKE 16526, 0 )
```

Now program 4a when Run should give precisely the same result as program 4. Re-enter the machine code of program 4a, but enter, say, eight or nine NOPs first. Then Save this as program 4b and run. This should give exactly the same answer as programs 4 and 4a.

If you had used program 4 with the leading NOPs, the absolute address JP NZ NN would have been wrong. What we have here is a piece of code which we can start at any address and it will work with no changes. This is very useful as it enables the programmer to write blocks of code without having to worry about absolute addresses.

Program 4a shows the point from which we count backwards and forwards, this point is always the next instruction past the relative jump, and for the purpose of simplicity, the maximum count in either direction can be considered to be 120.

JUMP, I

There is a further refinement which can be made by the use of

CODE 16 (DJNZ DIS)

This command automatically decreases variable B by one and if the F variable is not equal to zero, jumps the given displacement forwards or backwards. If the F, or flag, variable is equal to zero it continues with the next command.

Program 4c demonstrates its use. Either re-load 4 and:

```
POKE 16523, 16 ) DJNZ DIS
POKE 16524, 253 )
POKE 16525, 0 ) NOP
POKE 16526, 0 ) NOP
POKE 16528, 0 ) NOP
POKE 16529, 0 ) NOP
```

or enter the code program 4c and Run. Does this give the same result again? What we are doing is gradually refining the simple multiply program to see the effect of the different commands.

Two additional but related commands that we need to examine are Push and Pop. Push places the values held in the relevant pair of variables into a position in memory, otherwise known as the stack.

We can push as many pairs of variables on to the stack as we wish. The command Pop retrieves the variables from the stack. Note, however, that Pop pulls off the last values Pushed. Thus: PUSH HL
POP BC

can be used to transfer the contents of HL to BC. It is also very useful for saving the flag variable for later use, and effectively obtaining more than three pairs of variables.

At this point let me explain that when we first call our USR routine, we push a Return address on the stack. This is how the machine knows where to return to. The command Return Pops the next stack address and jumps to it.

Let us now return to the playing board and use some of these commands to simplify the coding. Program 5 is the original and program 5a the simplified version. We no longer have a Basic program equivalent, as we did last month. In its place I have entered comments. The program as entered will produce the same board, in a program of approximately half the size, but it also has other capabilities. Make the following changes:

```
230 PRINT AT K, 11; ""
POKE 16528, 10
POKE 16562, 10
POKE 16538, 13
RUN
```

and then try:

```
220 FOR K = 2 TO 15
POKE 16541, 12
POKE 16552, 12
RUN
```

We can also move the board anywhere on the screen. The only way of really understanding what is happening is to experiment — continue until the machine-code routines do exactly what you think they should do. It really is a case of practice.

FINANCIAL GAMES for ZX81 SPECTRUM BBC

GREAT BRITAIN LIMITED:

You are P.M. and Chancellor of 'Great Britain'. You must select the party you wish to represent and your AIM is to stay in office for as long as possible.

You must control INFLATION and UNEMPLOYMENT, maintain the EXCHANGE RATE, introduce SOCIAL REFORMS and stay POPULAR. The game is split into SECTORS: COUNTRY PROFILE; SHOPPING BASKET; BUDGET DAY (A) & (B); REFORM OPPORTUNITIES; and most important ELECTION NIGHT (every 5 years).

A facility exists to SAVE your game to continue later.

INHERITANCE: A 2 part game full of excitement. Prove your financial acumen in PART 1 by investing wisely at the STOCK and METAL MARKETS. (If desperate for funds try the CASINO or HORSE RACES). Enter the world of BIG BUSINESS in PART 2. Find the secret formula for PARADISE COLA; manufacture & market the drink and cope with STRIKES, FIRES, and FRAUDS. Your AIM is to become a MILLIONAIRE.

Large RAM versions for SPECTRUM and BBC contain major enhancements and many extra features to take full advantage of these Machine's extra facilities.

	ZX81 16K	SPECTRUM 48K	BBC 32K
1 GAME:	£4.95	£ 5.95	£ 5.95
2 GAMES:	£8.25	£10.25	£10.25

Further details of these and other games available on request.

Fast service

SPECTRUM & ZX81 KEYBOARDS

ZX80/81 KEYBOARD £24.95 (illustrated)
2 Shift keys
Large space key
Large Newline key
Single keys for EDIT, RUBOUT & FUNCTION.
Full Repeat

also for above 4 single key cursor control keys extra £3.

ZX SPECTRUM £26.95

4 shift keys — one for each level. No more awkward, finger knotting exercises!

All keyboards are fully assembled and just plug into your ZX81 or Spectrum. All keyboards etc. are in 3 colour (4 for Spectrum) under hard wearing clear caps. Proper keyswitches — full size. Full fitting instructions & 12 month guarantee naturally.

Payment — Cheque, Postal Orders, Access or Cash on delivery. Phone order welcome. Prices include postage (overseas add £2) etc.

The best software (by various authors) at low prices.

QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."

from the ZX Software review in
Your Computer, May '82 issue.

"I had your Invaders/React cassette ... I was delighted with this first cassette."

P. Rubythorn, London NW10

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

E. H., London SW4

"I previously bought your Cassette One and consider it to be good value for money!"

Richard Ross-Langley
Managing Director
Mine of Information Ltd.

CASSETTE 1

(eleven 1K programs)

machine code:

React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.

Basic:

I Ching, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, ready for when you get 16K.

Cassette One costs £3.80.

CASSETTE 2

Ten games in Basic for 16K ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.

Cassette Two costs £5.

CASSETTE 3

8 programs for 16K ZX81

STARSHIP TROJAN

Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.

STARTREK This version of the well known space adventure game features variable Klingon mobility, and graphic photon torpedo tracking.

PRINCESS OF KRAAL An adventure game. **BATTLE** Strategy game for 1 to 4 players. **KALABRIASZ** World's silliest card game, full of pointless complicated rules.

CUBE Rubik Cube simulator, with lots of functions including 'Backstep'.

SECRET MESSAGES This message coding program is very tulp qexi jf.

MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.

Cassette 3 costs £5.

CASSETTE 4

8 games for 16K ZX81

ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves.

GUNFIGHT (machine code)

INVADERS (machine code)

GALAXY INVADERS (machine code)
Fleets of swooping and diving alien craft to fight.

SNAKEBITE (machine code)
Eat the snake before it eats you. Variable speed (very fast at top speed)

LIFE (machine code)
A ZX81 version of the well known game.

3D TIC-TAC-ONE (Basic)
Played on a 4x4x4 board, this is a game for the brain. It is very hard to beat the computer at it.

7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman).

Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:

Michael Orwin, 26 Brownlow Rd. Willesden, London NW10 9QL (mail order only please)

CONTROL MIDWICH MC

The Midwich MC is a control computer which should prove very useful in school and university labs for teaching and research. John Dawson interfaces with reality.

IT SEEMS that almost everyone wants to use their computer to make things happen in the real world. Aircraft simulators, robot arms, timing circuits for model racing cars, solar-heating controllers are all popular subjects in both the U.K. and America. But the problem is simply that most amateur or domestic machines are not designed for those purposes.

Either you are in the single-board, machine-code league or the dominant routes in and out of the computer are the keyboard and television. The BBC Micro, model B, is one of the few computers to offer analogue to digital (A-D) converters for measuring a changing input voltage. Nevertheless, you need your own expansion board and your own programs if you want to do very much more than determine the position of a joystick for game playing.

When I opened the box containing the Midwich MC Microcontroller the machine inside seemed to be exactly the computer with connections to the real world that I had been promising myself I would build for the last four years.

The Midwich Microcontroller, like several other British computers, originates from the Silicon Plains of East Anglia. Prices for the machine start at £299 for the 12V version; the mains version reviewed here costs £375, but a £30 discount is available for educational buyers.

Very powerful commands

The Midwich Computer Company Ltd was established in 1979 to distribute and manufacture small computers. The first machine that the company handled was the Nano-computer by SGS-ATES. Production ceased for that micro at the end of 1980 and yet it seemed that there was a hole in the market that could be filled by a British computer.

David Clarke, Tom Hogan and Ian Johnson thought that the gap was at the low-cost end of the market, and that the plug should be a real-time, user-friendly computer which could educate people in the use of computers for control purposes, while at the same time providing a serious microcontroller in its own right.

While this was happening, Midwich was thinking about a project for batch reactor control using software developed at Oxford

University. The special, high-level language written for the reactor-control job evolved into the version of Basic built into the Midwich Microcontroller.

The Basic in the Midwich Microcontroller is similar to Microsoft in many respects and you will have no difficulty in adapting programs or thought patterns to this machine, but I doubt that you will have ever encountered instructions such as DI, EI, Wait, RTI, Sched, Overlay, or DSched.

These are the instructions used to run two programs simultaneously so that you can enter immediate commands from the keyboard while the computer is actually running another entirely separate program. These commands are very powerful and, as far as I know, are unique to the Microcontroller Basic.

Electrical safety

The Midwich Microcontroller is a single-board computer mounted on a substantial steel base plate. The machine is enclosed in a very robust structural foam case — the Apple II uses a similar one although its case is more sharply styled.

The two halves of the case are held together by 15 proper metal screws inserted into brass nuts moulded in the structural foam. This is important because you can open and re-assemble the case as often as you like without stripping the screw threads.

The electrical safety design of the computer is excellent, absolutely first-rate, with wire

mesh over the ventilation slots to prevent little fingers sticking little spanners into the works.

When you look inside, you see that in terms of personal safety — never mind shorting the integrated circuits — the mesh was not necessary because the mains side of the power supply is heavily insulated. You can safely run the computer outside its case for demonstration purposes.

The Midwich Microcontroller uses a single Z-80 microprocessor running at 2 MHz and 16K of dynamic RAM are included on the single board. Figure 1 illustrates the interconnections between various sections of the computer.

Educational plus

There is 12K of ROM which houses the monitor and control Basic interpreter. A Z-80 counter timer chip (CTC) provides a real-time clock and a number of other facilities, and there is one Z-80 PI/O used for the keyboard interface and the cassette I/O.

The expansion unit has a spare 4K EPROM socket. A second board is screwed to the upper

half of the case and that holds 57 keys for the keyboard. There are no defined cursor-control keys and no separate numeric keypad. The keyboard is laid out in the standard QWERTY pattern and can generate the full ASCII character set.

At the rear of the computer are sockets for 230V mains power or, with a different power-supply unit, 12V AC. Other sockets provide signals for a cassette recorder, motor control as well as input and output. There are also phono and BNC sockets for UHF signals and video for your VDU. Finally — and this is the Microcontroller's real claim to educational pre-eminence — there is a socket for a bus interface which brings 50 lines out to the experimental unit.

The experimental unit is a double-sided printed-circuit board with a breadboard block mounted as an integral part of the unit. There is a 30-way terminal block which will take ordinary wires from other circuits in your experiments and connect them to four lines from each of the six accessory slots on the experimental unit.

Digital-to-analogue and analogue-to-digital boards can be plugged into the accessory slots and you may then take signals from the real world and convert them into numbers which the Microcontroller can process.

When your program has drawn conclusions from the data you have acquired the machine can send numbers to the D-A converters which will output analogue voltages to the terminal block to control and modify your experimental process.

The breadboard allows you to build a prototype circuit using integrated circuits and other components to connect special transducers such as pH probes, thermocouples, wind-speed sensors, humidity detectors, photocells and pressure gauges to the Microcontroller.

You can buy more experimental units so that several people can prepare hardware for an experiment before plugging it on to the computer bus and devices such as oscilloscopes to run their program.

Versatile form of Basic

Up to six accessory boards can be plugged into the sockets on the experimental unit. Currently available boards include an eight-bit A-D converter, an eight-bit D-A converter and an eight-bit digital input/output board.

Three ranges are provided for both the incoming and outgoing analogue boards: 0V to +10V, -10V to +10V, and 4mA to 20mA positive input or output. The basic range on each type of board is 0 to +2.5V.

The A-D board will accurately follow fast signals as the Ferranti ZN-427 converter chip is placed after a National Semiconductor LF-398 sample and hold chip. The time taken to convert an analogue voltage into a number can make a simple A-D converter inaccurate at quite low frequencies but the Midwich Microcontroller has a professional approach to overcome the problem.

The company has announced two more accessory boards, a 2732 EPROM programmer card and a 12-bit analogue-input board. An IEEE-488 interface should become available within the next three months.

The software is one of the few versions of Basic that takes account of devices other than printers connected to the computer. The Midwich Basic interpreter deserves to be widely copied. It is fast; keywords can be abbreviated to single letters and a full stop; it has a wide range of commands for taking data from the experimental unit and sending information back; and it permits you to work in four different number bases.

Ease of translation

Some like to measure the success of a computer language by the ease of transfer into machine code or assembler — the Midwich Control Basic is very successful in these terms. The format of a USR statement — jump to a machine-code subroutine instruction — is:

USR e1, (v1,v2,v3, . . . vn)

where "e1" is the address of the routine and "v" represents a series of variables or array elements. Each variable will pass a value to the machine-code subroutine. Both of the following instructions are legal calls to machine-code subroutines:

(continued on page 79)

BIG VIC SAVERS from the Experts

The VIC CENTRE

FOR STARTERS

The complete VIC-20 colour computer kit to get you started.

The VIC is friendly, clever and very powerful. Our Starter Kit comes complete with:

- The VIC 20 colour computer
- The VIC cassette deck
- 10 blank cassettes
- The VIC games joystick
- The teach yourself "Introduction to Basic, Part 1" and the VIC User Manual.
- We supply a 13 amp plug and give you the VIC Centre twelve months warranty

Your VIC Starter Kit saves £20 on RRP (before VAT) and will be mailed complete and ready to go.

SAVE £20!

£217
excl VAT

Total price £249.55 incl VAT + £4 post & packing and insurance.

TV Monitor and VIC computer not included in offer

GETTING BIGGER

Got a VIC 20? Then you will probably want to expand its memory capacity and use cartridges such as the Programmers Aid or the Super Expander. With the VIC Centre Expansion Package you can take your VIC up to 30K with the Arfon Expansion Unit with its seven slot mother board and integral power supply. The aluminium cover will allow you to neatly position your monitor or TV set.

A 16K Ram expansion cartridge
A choice of either *Programmers Reference Guide* or *VIC Revealed* and a choice of *Super Expander* or *Programmers Aid* or *Machine Code Monitor* cartridges

SAVE £20!

£180
excl VAT

For just £180 excluding VAT the Getting Bigger kit saves you £20 and has:

- The Arfon Expansion Unit
- Cover to take TV

Total price £207.00 incl VAT + £4 post & packing and insurance

HAVE FUN AT OUR EXPENSE

Any three VIC Centre cassette games for just £17.50 excl VAT

Choose from:

- Blitz
- Canyon Fighter
- Star Wolf
- Tunesmith
- PR Software
- Packman
- Invader Fall
- Vic Cube
- Othello
- Super Moon Lander

Total price £20.12 incl VAT + £2 post & packing

Any 3
£17.50

 HOME COMPUTERS LTD

(continued from previous page)

USR HEX 3C00, (A(B),N)
USR W, (B,H)

In the first case, the address of the subroutine is at 3C00 hexadecimal and in the second it is at the address stored in the variable marked "W".

The documentation is profuse and excellent. There are many examples to help you with familiar and unfamiliar concepts and while it will take you some time to appreciate the potential of the system, the manual will let you go as far and as fast as you want to.

For example, the following Basic program is given in the manual with a circuit diagram and a good explanation as a trial application. It sets up the computer as an automatic ranging voltmeter:

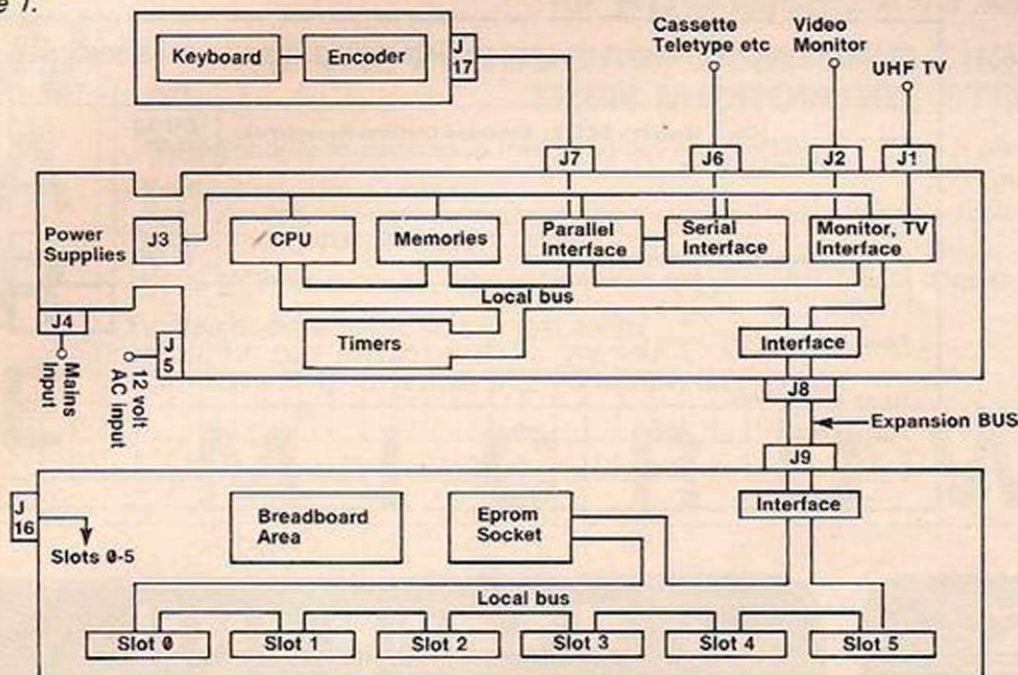

Figure 1.

```

10 P. = 12 : EI
20 OUT (2,15)           Sets port A
                          as output
30 OUT (0,1)           Sets op amp
                          on highest
                          gain
                          Gain = 100

40 C = IN(8) : N = 8
50 IF C < 255 THEN GOTO 1000
60 OUT (0,2)
70 C = IN(8) : N = 4   Gain = 50
80 IF C < 255 THEN GOTO 1000
90 OUT (0,4)
100 C = IN(8) : N = 2   Gain = 25
110 IF C < 255 THEN GOTO 1000
120 OUT (0,8)
130 C = IN(8) : N = 1   Gain = 12
140 IF C < 255 THEN GOTO 1000
150 PRINT "Voltage must be too
    high. DISCONNECT
    IMMEDIATELY" : GOTO 1500
1000 V = (C/255 * N)

```

```

1010 PRINT V, "Volts"
1020 Wait (20)
1030 GOTO 10
1040 STOP

```

There are other applications in the extensive documentation for controlling, among other things, lights, demonstrating "aliasing" between an input signal and the sampling rate.

The Microcontroller is available from Datac Ltd, Tudor Road, Altrincham, Cheshire WA14 5TN.

Griffin and George, well-known scientific supplier to the educational market, is distributing the machine and the special 12V version. Griffin and George will also be offering a range of transducers with any necessary electrical interfaces and educational buyers should write to the company, 285 Ealing Road, Alerton, Wembley.

CONCLUSIONS

■ The Midwich Microcontroller is a strong competitor with the RML 380-Z for the educational market. The system is less expensive and more attractive in several ways. The concept of the computer as a control device is in the warp and weft of this system.

■ The computer is more strongly built than the Acorn Atom and has a greatly increased capability for taking in information, processing it and displaying the results.

■ I have a few niggling criticisms of the machine: I did not like the character design and the keyboard is positioned too high by ergonomic standards. But this machine will not be used for word processing by an 80 words-per-minute typist; it does its job and looks able to go on doing it for a long time.

■ I would like to have had a cage to protect the accessory boards from accidental knocks, but most users should be able to build something suitable.

■ An assembler program is soon to be available and the manual for that looks very good, but I would have thought that this machine was an absolute natural for Forth; I expect to see a version written very shortly by a user, even if Midwich does say that it has no plans for another high level language.

■ A high compliment was paid to the Microcontroller unintentionally by a colleague who said he thought it was too well engineered — a case of technical overkill. He clearly did not realise that young engineers and scientists need the best tools. If you are learning a subject you need predictable, reliable machinery so that you can rely on the measurements you make. You should not have to worry about errors contributed by your tools.

■ I like the whole system very much. The Microcontroller should be carefully investigated by any science faculty in secondary education considering a computer system for teaching and research.

ECR 81 DATA RECORDER SAVES AND LOADS YOUR PROGRAMS EVERY TIME!

The ECR81 Enhanced Certified Recorder from MONOLITH is a major advancement in cassette recorder technology which minimises the problems associated with standard audio recorders. The unit is a high reliability program store for ZX computers based on a modified, proven cassette mechanism. The two sections of data recording circuitry automatically ensure precise levels are written onto the tape and that optimised signals are received by the computer.

THE ECR81 IS NOT SUITABLE FOR AUDIO REPRODUCTION
NO MANUAL VOLUME OR TONE CONTROL ADJUSTMENT PROVIDED

- Each ECR81 comes complete with its own individual certification tape, tested and serial numbered to prove your machine reliability.
- Mains Operation only.
- Mains & DIN connector leads provided.
- Certification of tape head alignment - height and azimuth.
- Certified tape tension, torque and speed.
- Fast forward and rewind tape search controls.

The ECR81 is also suitable for Sinclair ZX80

- Please allow up to 28 days delivery. ● The ECR81 is backed by our 14 day money-back option.

Bridge Software RAM Pack with £1 OFF BS software

Both RAM packs fully assembled in neat black ABS plastic case (only 27 x 47 x 76 mm). Supplied with foam strip connector to improve mechanical stability. No annoying trans hiss. guaranteed. Fully compatible with ZX Printer. Sent by return, first class post.

16K RAM £26.95 64K RAM £59.95

All inclusive prices. When ordering, deduct £1 from price of any software item. NOTE 56k of the 64k RAM is user-addressable. Memory is in four areas:

- 0-8K Sinclair BASIC ROM (read only)
- 8-16K Machine code area unaffected by CLEAR, NEW, LOAD, SAVE.
- 16-32K BASIC program and display area.
- 32-48K BASIC variables and arrays and/or machine code.

BS Quality Software for the ZX81

- BRIDGEMAN (BBC "B")** £7.90
Bridge Software's version of the popular gobbler game. Hi-res, colour, sound.
- LYNCHMOB (ZX81 16k)** £4.95
A competitive game for 2 to 6 players loosely based on Hangman. Animated graphics. Full on-screen scoring. Great fun, educational too.
- LYNCHMOB (ZX Spectrum 16k)** £6.50
As for the ZX81, but developed to make full use of Spectrum's hi-res graphics, colour and sound.
- VIC INVADERS (unexpanded VIC 20)** £6.90
Machine code, colour, sound.
- 4K INVADERS (ZX81 4k minimum)** still available while stocks last at £3.00
(GALAXY INVADERS) Machine code, 10 difficulty levels. Top scoring game in Your Computer's May 1982 review of ZX81 software. "Deservedly popular... Good value" Pop. Comp. Weekly. "Great game!" S.F. Glos.
- SUPER INVADERS (ZX81 16k)** £4.95
Enhanced version of 4k INVADERS, including on-screen league tables etc.
- MULTIGRAPHICS 2.3 (ZX81 16k)** £6.90
A user-friendly menu-driven package of procedures giving you full control of the ZX81 graphics functions to compose designs, drawings, adverts etc. Incorporates advanced sketchpad, 3 sizes of text (including lower case), animation, printer output, SAVE displays etc. 20 pp. Manual included.
- MULTIGRAPHICS 64 (ZX81 64k - i.e. 56k RAM)** £7.90
An advanced version of MULTIGRAPHICS with enhanced animation facilities.
- GRAPHICS STARTER PACK (ZX81 1k)** Four 1k programs with 12pp. manual. £4.50
- STATISTICS PACKAGE (ZX81 1k)** Four 1k stats programs with 4pp. manual £4.00
Mean, SD, variance, regression, t and F tests etc. Data correction.
- MULTITEXT (ZX80, 4, 8 or 16k RAM)** £3.50

Send s.a.e. for further details, specifying your computer.
Prices include 1st class, return-of-post mail in U.K.
European customers please add 30p. per software item; 70p worldwide (Air Mail).
Overseas customers, please write for details of hardware mailing charges.
Available by mail order or from leading computer stores. Trade enquiries welcome.

SOUND with ZX-81!

MAKE AMAZING SOUND EFFECTS WITH YOUR ZX-81

£25.95 THE ZON X-81

incl p&p & V.A.T.

- * The ZON X-81 SOUND UNIT is completely self-contained and especially designed for use with the ZX-81. It just plugs in — no dismantling or soldering.
- * No power pack, batteries, leads or other extras.
- * Manual Volume Control on panel — ample volume from built-in loudspeaker.
- * Standard ZX-81 — 16K Rampack or printer can be plugged into ZON X-81 Sound Unit without affecting normal ZX-81 operation.
- * Huge range of possible sounds for games or: Music, Helicopters, Sci-Fi, Space Invaders, Explosions, Gun-shots, Drums, Planes, Lasers, Organs, Bells, Tunes, Chords etc., or whatever you devise!
- * Uses 3-channel sound chip giving programme control of pitch, volume of tones and noise, all with envelope control.
- * Easily added to existing games or programmes using a few simple "BASIC" lines.

FULL instructions with many examples of how to obtain effects and the programmes, supplied. Fully Guaranteed.

HI RES. Two Player contest around any of 16 different race
tracks. Steering, acceleration and braking controls. Set the
level of difficulty for driver and choose the no. of laps. £5.95

Astro Warrior (12K)
The ASTEROIDS IDEA, but developed and improved!!
Flying around the screen you must shoot your way out of
difficulty. Aliens attack in increasing numbers. Refuel at
specified fuel dumps before you run out. A HI RES game
for experts. £5.95

Super Breakout (3K plus 3Kgr plus FI. Pt.)
NOT just ANOTHER version!! Equally good in colour and
black and white, the program has the advancing wall(s)
feature plus genuine curved bar action with 6 ball angles.
Terrific sound effects make it a MUST for arcade game
addicts. £4.95

Swarm (12K)
Alien Killer Bees are swarming the Earth. The Queen Bee is
indestructible. Your only hope is to destroy the grubs and
new born males before they wipe you out. You get three
lives with a bonus at 10000 points. (HI RES graphics) £4.95

ROM SELECTOR BOARD
Suffering from congestion? (PROGRAMMER'S TOOLBOX
WORD PROCESSOR etc.) Switch between up to 4 ROMS
located at Hex A000. Assembled and tested unit with
compact professionally produced PCB and good quality
components. Fits easily into the Utility Socket (IC 24).
Only £19.50

Adventure

**ALL THE EXCITING, INTRIGUE AND FRUSTRATION OF A
MAIN-FRAME ADVENTURE! 12K**
Explore the tortuous forests, dark caverns and castle
dungeons. Beware the maze of twisting tunnels and the
desert wastelands. Outwit the predators. Rescue the
PRINCESS and carry off the treasures.
Great Skill and imagination are required to play this
excellent game and you may still never exhaust all the
possibilities.
By devising methods of condensing messages, the author
has been able to include many features which would
otherwise be available only on much larger computers.
Start your adventure now - £7.95

Chess (12K)
Improved graphics, plays black or white, mid game level
changes, look ahead up to eight moves, offensive, normal
and defensive play. Ten sub-levels, castling, 'En passant'
by player. Rejects illegal moves. Take back moves and
action replay with take over. Set up problem games. £7.95

Cowboy Shoot-Out (12K)
Full feature, two player, arcade shooting game. Cactus
plants, wagons, animated cowboys. Superb graphics and
sound. £6.95

Hyperfire (12K)
Aliens have over-run six planets. Object to clear them.
Super high-speed action. Four defender ships. Hit alien
fuel dumps and alien ships. Aircraft radar shows
placement of approaching ships. Thruster control -
including diagonal movement. Best sound effects yet!
Avoid shots from outside vision scan. £7.95

Air Attack (12K)
Command an East Coast anti-aircraft battery. Destroy
enemy fighters, bombers and doodle-bugs. Ingenious
graphics depict planes approaching, veering and flying off.
Search the sky and scan the landscape through 360 degs
GOOD SOUND, GREAT ENTERTAINMENT. £7.95

Space Fighter (6K 3Kgr)
Super High Speed "Defender" game. Five types of
intelligent aliens. Repeating laser cannon, smart bombs.
hi-score, rankings, bonus points, six skill levels. Exciting
sound effects. £7.95

MODEL B (or 32K MODEL A)
Space Invaders
Sensational, high speed program with an abundance of
features. Brilliant use of colour graphics and sound. 48
strong Invader Fleet of three different types plus
Mothership scoring mystery bonus. Choice of six invader
speeds and three bomb speeds. Vertical, angled and
exploding missiles. Options to replace defences and
suppress new fleet advance. Bonus bases awarded each
new sheet. Scoring according to overall difficulty level.
Ongoing display of score and hi-score and end of game
ranking of top five scores.
This program has many unique extras e.g. a 'battle
analysis' showing number of each invader shot down, how
many Motherships destroyed, number of sheets cleared,
shots fired, percentage hits and bases lost. £6.95
If you needed a reason to upgrade to 32K, now you have it!

Timetrek
The ultimate 'real-time' Startrek, with Battle Zone
indecision your main enemy. Brilliant colour and sound.
'One-screen' presentation. Twenty skill levels. Panic
Button for 'once-only' space leap. Torpedo sight control. A
programming masterpiece!! £7.95

Eldorado Gold
Welcome to a past age, when cowboys ruled the roost and
Indians terrorised the new settlers. In ELDORADO
COUNTY many fortunes were made - and nearly as many
lost! Legend has it that Old Bill McCluskey, who met a
rather sudden death, had built up a vast treasure
somewhere in the nearby territory. Can you end up a rich
man where many have failed? If the marauding Apaches or
Big Jake's gang don't get you, you may die of thirst in the
desert or starve to death in jail. £6.95

World Geography
Beautifully drawn HI RES colour map and graded testing of
world capitals and populations, makes learning
geographical facts a pleasure. 160 countries covered in
total. Pin-pointing of each location in turn aids general
awareness. £5.95

Space Maze
You have crash landed in the legendary labyrinth of Titan,
inhabited by alien monsters known as 'Froogs'. Find your
way out to the 'Transmat' probe before being cornered and
eaten. Eight skill levels and 3D colour graphics. £5.95

Astro Navigator
Navigate your way through a variety of treacherous
caverns, inhabited by killer rockmites. Avoid the dangers
with your climb, dive, reverse and thruster controls. 5 Skill
Levels. Top 5 scores ranked. Excellent colour graphics and
sound in this exciting 'real-time' game. £4.95

MODEL A or B
Chess
High quality chess game with castling, 'en passant', play
black or white, rejection of illegal moves and six levels of
play. Set up problem games. £7.95

Micro - Budget
Proven personal finance program which enables you to
record, review, analyse and budget your income and
expenses for twelve separate monthly periods. Coding
system gives sub-totals, selective summary of entries, and
cumulative cash flow. All figures can be saved to tape. £6.95

Munchyman
Colourful and highly entertaining version of this popular
arcade game. Munch your way to a high score, before the
'munchers' devour you. Reverse roles by munching the
stars. The more you score, the harder the game gets. £5.95

Other programs available:
Startrek £5.95/Gomoku £3.95/Disassembler £5.95
Cat & Mouse £4.95/Zombies (New) £3.95

BBC GUIDE

■ I have just bought a BBC model B machine, and although the provisional guide supplied with the machine is good, it makes no mention of the more advanced features of the machine. Could you tell me if the new guide has been completed, and if so whether it contains an introduction to machine code?

*Jonathan McFarlane,
Didsbury, Manchester.*

THE BBC says the guide is ready, and will be sent out shortly. My own copy of the new guide, which arrived at the beginning of July, is a massive work of 516 pages. There is a chapter in it called "Assembly Language" which explains reasonably clearly how to use assembler on the computer. It explains how an assembly-language program is 'held' within a Basic program using square brackets, in the same way as assembly-language programs could be easily placed within Basic ones on the Atom. You will find that the explanation of the advantages of staying away from high-level languages such as Basic is sufficiently clear to enable you — with some care — to become proficient at the lower stages of programming other than in Basic. There is a comprehensive discussion of machine-code entry points, and a list of operating system calls.

MORE RAM

■ As you probably know, Mode 7 on the BBC Micro does not offer a high-resolution graphic memory map and as a result uses the least RAM of all the eight modes. It is obviously useful for programs which do not require high-resolution graphics, but need more RAM, such as in an Adventure Game. Is it possible to do the same on the ZX Spectrum resulting in a low-resolution screen memory map and about 14K of RAM for the user, as opposed to the 9K available when high-resolution graphics are utilised? If so, how?

*Howard Skyles,
Great Yarmouth, Norfolk.*

THE ANSWER, I am afraid to say, is no. There is no trade-off on the Spectrum, as there is on other micros which have high-resolution graphics, between the degree of resolution and available RAM. The resolution for Plot is firmly fixed at 256 by 192, no matter what you do. Therefore, on a 16K Spectrum you are stuck with 9K. However, remember that Sinclair Basic is

efficient at packing a good deal into a little RAM space — especially with the use of the one-key entry which stores all the keywords far more economically than most other micros. Therefore, you can enter a surprising amount into the 9K. As well as this, there are a number of well-publicised techniques for making the most of the ZX-81 memory. These techniques will also help you with the Spectrum.

MIC AND EAR

■ I have a question regarding the ZX-81's tape recorder compatibility. As you know, the ZX81 incorporates two sockets marked Ear and Mic, both of which should be connected to their respective two sockets on the recorder. My problem is that I have a Panasonic recorder with only one auxiliary five-pin DIN socket marked REC/PB. Can I Load and Save ZX-81 programs with my Panasonic, and if so, how?

*Keith Richmond,
Enfield, Middlesex.*

THE SIGNAL sent out by the ZX-81, and expected back by it, is not suitable for an auxiliary plug. You need to plug the Mic output of the ZX-81 into the microphone, and not the Aux, input of the cassette recorder, and the Ear lead of the computer should go into either the headphone or earpiece socket. You may need to have special plugs to make this work. Without adding an extra amplifier between the computer and the recorder, there is no way you can get the computer to work satisfactorily with a DIN arrangement of the type you describe.

COUNT THE DAYS

■ For part of a program for the ZX-81 with 32K I require a method of counting the number of days between specific dates as a double check, and to know the day of the week of the latest date. I have solved the second part of the problem by using part of another program: the first, however, is giving me nightmares especially where the period is longer than a year, and where leap years are involved. I would be grateful if you would either solve the problem or point me in the right direction.

*Derek Chadwick,
Kingston, Surrey.*

A SUITABLE program — written for a ZX-80 but which can relatively easily be converted to the ZX-81 — is on page 139 of the book *The*

Gateway Guide to the ZX-81 and ZX-80 by Mark Charlton. Because of the difference in the way the ZX-80 and the ZX-81 evaluate logic, you will have to change some minus signs to pluses, and vice versa.

WRONG NUMBER

■ I am experiencing a most irritating arithmetic problem with my Sinclair ZX-81, with and without 16K. The following simple program demonstrates the problem:

```
10 LET A = 1234.99 + 1234.99
   + 1234.99
20 LET B = 1234.99 + 1234.99
   + 1235 -.01
30 PRINT A - B
```

When this program is Run, the answer — which of course should be 0 — is 9.5367422E-7. If all the values in the program are multiplied by 100 the problem disappears. I need to use this checking routine in a program I am writing for my work — I am an accountant. Please could you explain why this problem occurs and how to cure it?

*A R Sampson,
Stroud, Gloucestershire.*

NO COMPUTER holds every number exactly, and the ZX-81 is no exception. The degree of accuracy of a computer, and a calculator for that matter, depends on the number of decimal places the number is held to within the computer, and the number of places which is finally displayed. Often this is one less than the number of places to which the computer works. People often make an enormous fuss over these minute errors within computers, forgetting that in the real world we generally work to accuracies which are several orders of magnitude less. The "wrong answer" you claim the computer gives is actually less than .000001 above the true answer. If you are dealing with money in your programs — which seems likely if you are an accountant — you need only two-figure, or at most, three-figure accuracy to represent pounds and pence. If the problem still bothers you, simply multiply everything by 100 while working, and then divide the final answer by 100. Whenever you are working with numbers when the accuracy is important, try to eliminate as many intermediate steps as possible, as each of these can introduce some slight error which can accumulate to a substantial error at the end.

VIC PRINTER

■ I have had a Vic-20 for some months now and I am delighted with it. However, I am taking an O level in computing, and for it I need to write three programs. I need a printer to be able to document it. However, I cannot afford a printer. I would be pleased if you could tell me: Can a printer be rented, and from where and for how much? Is it

worth buying the interface that allows the ZX-81 printer to be used with the Vic. This is taking into consideration that I would like to be able to print graphics on it?

*Paul Hampson,
Cheddleton, Leek.*

FIRSTLY, I do not know whether you can rent a Vic printer in your area. I know the Vic printer is relatively expensive, especially when compared with the price of the computer. Perhaps you could contact the dealer from whom you bought the computer, and ask if it would be possible to visit the shop with a cassette with your three programs on it, and dump them there. I would not be too pushy about this, and you could be considered nothing but a nuisance. However, if you do decide to do this, make sure you have no trouble finding the three programs on your tape. I suggest you make up a tape just with the three on it so you do not tie the shop or the printer up for longer than is strictly necessary. If graphics are important, you should certainly consider buying the interface, as you can easily dump the contents of the screen, graphics and all, with the ZX printer.

SPECTRUM BASIC

■ Having just bought a Sinclair Spectrum, I would like to know whether it is possible to translate some of the wide range of ZX-81 software now available into Spectrum Basic. Is this feasible, and what are the relevant differences in the Basics that need to be considered?

*H T Garston Smith,
Broadstairs, Kent.*

THE VAST majority of the software sold for the ZX-81 is written in machine code, and the problems of converting that into Spectrum Basic are too horrible to contemplate. However, nearly all ZX-81 program listings can be converted into Spectrum programs without too much trouble. The only command in ZX-81 Basic which does not exist in Spectrum Basic is Unplot, and this can be emulated on the Spectrum with Plot Over. However, Plot works on a much finer grid on the Spectrum than it does on the ZX-81, so you may well want to change the display completely from the ZX-81 program. As well as this, Peeking and Poking into the display file on the Spectrum is far from simple, whereas it can be achieved fairly easily on the ZX-81. There are additional commands, including ATTR and Screens, which are simpler to use than Peeking into the display file, and are available on the Spectrum. I would suggest you type a ZX-81 program in, exactly as it is listed, then set about adding user-defined graphics, colour, sound and so on to make it better. In your early stages of such conversions, I would avoid any program which uses Peek or Poke.

COMPUTING IS EASY

David Parker and Martin Hann

Computing is Easy has been written for first-time computer users, and younger readers in particular will find it a simple and friendly introduction. It tells you what a personal computer is, how to program it, and how to get it working for you. The easy-to-follow style and amusing cartoons will help you to learn about computer programming in BASIC.

0 408 01203 X 128 pages £3.95

INTERFACING TO MICROPROCESSORS AND MICROCOMPUTERS

Owen Bishop

Consists of a series of practical projects for the home constructor by which a micro system may be linked to the world around it, e.g. light sensor or sound effects generator. The theory and circuits of each interface are fully explained.

Full constructional details, stripboard layouts, lists of components and hints on alignment and trouble-shooting. Also included are flowcharts and suggestions for methods of programming the system to operate with the interface.

Fingertips is our regular calculator column covering calculator news, programming hints and examples of unusual applications. The column is written and compiled by calculator enthusiast David Pringle who is glad to hear of any of your ideas. *Your Computer* pays £6 for each of your contributions published.

THE FINGERTIPS COLUMN receives a great number of programs and suggestions — not always totally complimentary. In spite of the advances of the cheap micro, calculator fiends have kept their resolve.

Only a month ago I saw a fully-fledged paper from the Theoretical Physics department of the Lawrence Berkeley Laboratories containing three statistical programs written for experimentalists — and an HP-35 calculator.

Many of you ask what criterion we use for selecting your programs. If there was one word to sum it up it must be imagination. In other words, an entry which has modified the last two lines of a previous month's Hi-Lo program is hardly likely to wake us up as quickly as a Three-Dimensional Chess simulator in 35 lines. In general a game has to be novel. We get about 20 moon-lander programs per month.

We also appreciate some programs which show the calculator as a working beast and not just a toy. For the more technically oriented, any new information or interesting quirks — synthetic programming and all that — tends to send us rushing fastest to our well-fingered calculators. Write a program incorporating one of these and it's like icing on the cake. Hand it in well-typed and the money and instant fame are nearly yours. Still, whatever your entry we're glad to receive it and will always read it.

The most frequent suggestions were from readers who take personal affront to the singling out of the large and expensive calculators in this column. Remember — write an interesting article on your cheap programmable, and we'll publish it. But just for you here is a program written for the Casio FX-180P by Mike Shallcross of London with

something more serious than games in mind.

As an accountant, he has devised and used the program for checking VAT registration numbers, which use a divisor of 97, but it will work for any normal check digit system. The International Standard Book Numbers, for instance, use a divisor of 11.

Program 1 runs on a Casio FX-180P or equivalent but could doubtless be adapted for most programmable calculators with four memories and conditional loop. It has been made self-initialising as far as possible, and so it is slightly longer than is strictly necessary.

To run the program, if the "K" memories have been cleared or used for other calculations in the meantime, the following steps are necessary:

- Store the divisor in K1
- Without clearing the display, run P1 in order to initialise memories K2 to K4
- To find or verify the check digit(s) for any number, key in the non-check digits and run P1
- For further numbers using the same divisor, simply repeat the last step.

Peter Dewell of Redditch follows up the suggestion of more Commodore PR-100 programs — *Your Computer*, May 1982 — with a non-iterative solution to Paul Stockwell's Intersection of two straight lines program. The two or more points for the lines are entered using the regression data key Ci.

(Ci Egn 1) F slope M0 F Intup M1 OM5 M6 M7 M8 M9 R/S.
(Ci Egn 2) F slope M2 F Intup-MR1 (MR0-MR2 = R/S Cs R/S.

If an error message occurs check the contents of M0 and M2 for the same slope, otherwise the error is

Program 1.

due to the intersection being out of range.

C Rawlinson has come up with a fishy little program for the Sharp PC-1500 — program 2.

If Roy Sirl will step forward and give us his address he will receive £6 for program 3.

$$\frac{C_m^a \times C_{n-m}^b}{C_n^{a+b}}$$

$$\text{where } C_y^x = \frac{x!}{y!(x-y)!}$$

To run it press 2nd inv c.t. RST

a STO 4
b STO 5
m STO 6
n STO 1
R/S

After a minute or two the required probability appears. The formula is most useful when applied to a pack of 52 playing cards. In this case a, b, m and n have the following meaning. a is the number of cards you want.

b is the number of cards you do not want.

m is the number of cards (of the kind you want) that you want.

n is the number of cards you take.

For the probability of three kings in a pack of 52 cards, including four kings in 10 draws.

a = 4, b = 48, m = 3, n = 10

P(a,b,m,n) = 0.0186167.

The TI-57 does not have a factorial button so this is the function of subroutine 0. The subroutine also correctly gives 0! = 1. The program is written without a subroutine to calculate the combinations to, paradoxically, save space. Instead there are nine calls of the factorial routine and some juggling with the memories. The program can be applied to bridge, poker or other card games. For instance, what is the probability in bridge of being dealt all four aces? Here a = 4, b = 48, m = 4, n = 13
P(a,b,m,n) = 0.00264
this is about one hand every 380 deals.

I have compiled tables of the probability of getting x cards out of y cards that I want (x,y) for y up to 12.

We had a very lively letter from New Zealander Henry Falkner who has some harsh things to say about all programmables and seems to prefer his Casio 602 to the 702 which he later bought. In his spare time he appears to be the musician for the City of Auckland Morris dancers — is he honest or are we naive? He says that he finds the music adaptor invaluable for some of his songs. Enter the Cloggies.

Finally — this month's program challenge. Write a program to calculate the number of people needed in a group before there is a probability of 60 percent for any two of the people to have identical birth-dates.

(continued on next page)

Program 2. It is remarkable how the non-technically-minded are more impressed by simple programs than by the most complex and difficult ones. This one never fails to amuse the uninitiated. After the Print statement in lines 20, 30 and 40, a fish swims lazily across the display.

```

10: WAIT 100
20: PRINT " THIS is what you get" (3 spaces)
30: PRINT " for using a" (7 spaces)
40: PRINT " LIQUID crystal display" (2 spaces)

YOUR COMPUTER

As a reader of *Your Computer* you'll agree that every issue is an invaluable reference.

To keep your copies in order you'll need a binder, specially designed for *Your Computer*, to ensure every issue remains in good condition for your future use.

To order your binder complete the coupon below and return it to us, with your cheque. Prices, including VAT, postage and packing, are as follows:

UK	£3.45
Europe	£4.00
Rest of the World	£5.00

To: General Sales Manager, Room 108, Quadrant House, The Quadrant,
Sutton, Surrey SM2 5AS, England.

Please send me.....*Your Computer* binders at £.....each.

I enclose my cheque/postal order for £.....made payable to IPC Business Press Ltd.

THE PROGRAM ENHANCEMENT PACKAGE FOR THE ZX81 (16K)

A suite of easy to use machine code routines designed to transform your Basic programs.

- DEFINED SCROLL REGION 1 line to whole screen
- SCROLL up or down ■ FILL SCREEN any character
- CHANGE BACKGROUND ■ CHANGE FOREGROUND
- INVERSE VIDEO ■ FLASH SCREEN
- CLEAR SCREEN without changing print position

Supplied on tape with a 6K DEMO PROGRAM and a FULL instruction booklet

ONLY £5.95 Incl. p & p

ZX81 & 16K

THE TOMB OF DRACULA!

3D HORROR ADVENTURE GAME!

Occupying over 13½K of memory, a superb 3D graphics adventure game for the ZX81 with 16K RAM, for only £3.95! Enter Dracula's tomb at 30 minutes to sunset ... wander through the tomb's pre-mapped 300 vaults in search of the fabled Vampire's Treasure ... pick up valuable silver stakes and use them to defend yourself against the lurking horrors ... ghouls, zombies, pits of primaeval slime ... See them all on the ZX81's plan of the tomb ... when it will let you! Take a chance on a Mystery Vault ... if your dare! And all the time the minutes are ticking by to sunset ... when Dracula rises from his coffin and comes after you! Each of the infinite levels of the tomb has its own 300 vaults ... go as deep as you like, the Prince of Darkness will seek you out in his blood-lust! **WARNING:** people of an exceptionally nervous disposition should play this game only during the hours of daylight! Special facility enables a game in progress to be saved on tape so you can continue it whenever you choose.

Price of only £3.95 includes ready-to-load cassette with library case and inlay, full instructions, postage and packing. Order today! Money refunded if not delighted! Send cash, P.O. or cheque to:

MOVIEDROME VIDEO (DEPT. YC3)

CAN YOUR COMPUTER SPEAK?

The **WIDEBAND SPEAKEASY** speech synthesiser adds voice response to any computer with a parallel port including PET, ZX-81, VIC, BBC, ATOM, HORIZON etc.

for Only £69 + VAT

- * UNLIMITED VOCABULARY
- * EASY TO PROGRAM
- * LOW MEMORY OVERHEAD
- * COMPLETE MANUAL WITH DICTIONARY, SAMPLE SOFTWARE AND TUTORIAL ON SPEECH PRODUCTION.

Also includes high flux speaker and power supply, all housed in high quality wood cabinet, with volume control and rear pitch control.

Programmed with simple phonetic codes. Apart from the obvious applications of voice response in manufacturing, testing, blind terminals etc., this product also teaches a great deal about linguistics and speech production.

Software is available in BASIC and Z-80 and 6502 assembly for direct input in PHONETIC SPELLING closely related to the ARPABET international phonetic alphabet.

IS YOUR ZX81 + 16K PROGRAMMED FOR PROFIT?

Or is it just another toy?

Today's Successful Business Man requires Fast, Accurate and Up To The Minute Information about his business to assist him to make the correct decisions to plan his company's growth and profitability.

WOULD YOU KNOW THE ANSWERS TO THESE PROBLEMS NOW?

- What is my Monthly Income over the next year?
- What are my Future Cash Requirements?
- How are my Costs rising eg. Sales, Materials, etc. And how will they effect my Profitability?
- What are the Trends in my business and where will I be if they continue?
- How can I test my Future Projects and Plans to find out their implications on my business?
- How can I convince my Bank and Creditors that my Forecasts are not just Guesses?
- How can I do all this easily from my normal business records and accounts with no special knowledge of Maths, Business Techniques, or Computing (other than how to operate my ZX81)?

HOW MANY TIMES HAVE YOU WANTED THAT TYPE OF INFORMATION TO HAND?

The answers to these problems and the relationship they have to your business are now available to you as often as you require with the use of your ZX81 and a specially created program for the business user.

THIS POWERFUL (over 500 lines), BUT EASY TO USE PROGRAM was created by a Business Consultant with over 30 years experience of small and medium size business problem.

THE PRICE OF YOUR PEACE OF MIND = £15

Complete with professional grade cassette, instruction manual, and input charts.

Cheques or P.O.s to:

P.R. Herbert M.B.I.M. The Consultancy,
13 Greenend Close, Spencers Wood, Reading, RG7 1EH.

SOFTWARE FILE

Software File gives you the opportunity to have your programs, ideas or discoveries published. We will accept contributions for any personal computer and will group programs for like machines together in the file. Please double-check your listings before sending them, and specify the memory they require. Mark your letter clearly for *Your Computer*. We will pay £6 for each contribution published.

Landscape

Garry Owens,
Leamington Spa,
Warwickshire.

2X-81

IN THIS ARCADE-type game for a 16K ZX-81 you are in control of an aircraft, the symbol >, flying over a mountainous landscape. Ground-based forces are firing missiles, letter As, at you and you must destroy the missiles and their fuel dumps, Qs, with your laser cannon and bombs.

Displayed at the top of the screen are your score and number of aircraft left — you start with five. You score 10 points for destroying a missile and 50 points for hitting a fuel dump. You lose a life if your aircraft is hit by a missile or if you crash into the mountain.

The control keys are:

- 6 — moves the aircraft down
- 7 — moves the aircraft up
- 8 — thrusts forward more quickly
- 9 — drops a bomb
- 0 — fires a laser cannon.

This program is based around eight machine-code subroutines:

16800 to 16854	control movement of aircraft
16857 to 16914	fire laser cannon
16915 to 16952	drop a bomb
16955 to 16989	scroll main part of display right to left
16992 to 17080	draw the landscape
17100 to 17180	increment score by 10
17190 to 17328	move bombs down and missiles up
17335 to 17348	check no missile has hit aircraft

The routines are called from a Basic program. Lines 1 to 3 use the machine-code routines and data; lines 4 to 90 the initialisation; lines 100 to 200 the main game; and lines 400 to 610 the crashing routine.

Bytes 16514 to 16720 are used as storage and data by the machine-code subroutines; 16514 to 16517 store the score; 16518 and 16519 hold the addresses of the aircraft on the

screen; 16520 and 16521 hold the addresses of the next data item for the landscape-drawing routine; 16522 is the time since the last A was placed on the screen; 16523 is the time since the last Q was placed on screen; and 16526 to 16718 deal with the data for the landscape-drawing routine.

To set up the routines enter fast mode and enter as line 1 a Rem statement of 278 zeros — eight whole lines plus 22. Then Edit line 1, rub out the line number and change it to 2, add 10 more zeros and press Newline. Edit line 2 and make it line 3. Peek 16792 should be 118. Peek 16800 should be 28 and Poke 16800, 128 should put an inverse space just after the Rem in line 2.

Now type in the short Basic program in program 1. This sets up the data for drawing the landscape. Run and then delete lines 10 to 60 and add program 2. This program Pokes the hexadecimal values of the machine-code routines — programs 3 to 10 — into the Rem statements. You had better save the program now to stop it accidentally disappearing into thin air.

Now add the lines in program 11. This is the final program. Save it now or you may regret it later. Run it in slow mode and see what happens. If it crashes go back and check that the machine-code routines are correct using a disassembler such as that suggested by Chris Lam in the May 1982 issue.

Life expectancy

Bharat Patel,
Shaw,
Oldham.

VIC-20

LIFE EXPECTANCY runs on a Vic-20 without any additional memory. It is made up of Print

statements and is very easy to follow. If anything is printed that does not answer a question, a message is given to repeat the correct answer. There are some unusual marks in the program listing; these are only graphic symbols — they provide capital letters when run — and are obtained via the Shift key or the Commodore flag.

The program asks you many questions on your daily life and activities and at the end the computer will produce an expected date to which you should live — it also tells you if your habits are so bad that you should be dead. The questions go into detail about your fitness, age, family, whether you smoke — and if so how many a day — and many other things.

Change of memory

Gavin Warren,
Redbarn,
Hertfordshire.

VIC-20

WHEN THE Vic is expanded to have more than 8K of RAM, the system reshuffles the screen and the start of Basic text, and this makes running any machine-code programs written for the unexpanded Vic impossible.

To solve the problem I wrote a simulator program. The program changes memory size, sets the screen start to 7680 again and sets the start of Basic to 4096 as on the unexpanded Vic.

If the program is loaded and run before using the desired program, no problems should be encountered.

```
10 POKE 648,30
20 POKE 36866,150
30 POKE 55,0: POKE 56,30
40 POKE 52,0: POKE 53,30
50 POKE 643,0: POKE 644,32
60 POKE 641,0: POKE 643,16
70 CLR
80 PRINT "(CLR) (BLUE)"
90 POKE 36869,240
100 POKE 43,1: POKE 44,16
110 POKE 4096,0
120 NEW
```

Key routine

P J Mills,
Tongham,
Surrey.

ATOM

IN MAY SOFTWARE File, G E Taylor gave some examples of the use of subroutines #FE71 in the Atom monitor. Since machine-code routines run far faster than Basic programs, it is best to obtain the fastest possible running speeds for, say, games, and then slow them down to the desired speed.

This program will not only read the keyboard, but also takes no action if #FF is returned in the Y register, and will reject all but the keys used by the program. The advantage of the program is that it checks for the valid keys in the assembled program so it does not have to be re-linked every time an incorrect key is pressed.

As an extra, the two subroutines will move a variable-sized cursor across the bottom of the screen in Mode 0. The keys I used were A and D. Remember that the value returned in the Y register is the ASCII value of the key minus #20. A or D must be pressed before the cursor will appear on the screen. The program requires 855 bytes.

```
5 Set space for labels
7 Choosing of bat size
10 Clear graphics mode
15 Set up basic constants
25-55 Read keyboard
60-65 Set # 80 if A pressed
70-75 Set # 80 if D pressed
85 Run assembled program
90-100 Set up Gosub jump
110 Rerun assembled program
1000-1030 Move left subroutine
1200-1230 Move right subroutine
1010/1210 Rub out cursor in last position
1020/1220 Reprint cursor in new position
```

Here are the constants and variables:

```
X nth cursor position
Z n-1 cursor position used in right subroutine
C n-1 cursor position used in left subroutine
M May be changed, gives a very crude speed control
QQ Assembler labels
W Value returned from assembler program — also used in subroutine or Next loop
E Calculated Gosub
```

As there are some forward jumps in the assembler program the program must be run twice. Therefore once the screen goes blank, press Break followed by typing Old and then Run.

```

The Pac-Man trail

Chris Lam,
Redhill,
Surrey.

SPECTRUM

THIS IS A Pac-Man-type program for the 16K Spectrum. While playing you are constantly

informed of your score, the number of lives you have left, and power. When you eat an asterisk — a power pill — it will boost your score by 10 and your power by 40. When your power is not zero, you can eat the ghost and gain 50 points.

You have four lives and if you are good enough, the game could last for ever. Lines 50

and 55 detect the movement of the Pacman controlled by the cursor keys. Lines 220 and 230 make the ghost follow you randomly. Depending on line 220, the Pacman is a @ symbol and the ghost is a "c".

Lines 1000 to 1150 can be changed to make the maze larger. You must also make appropriate changes to lines 50 and 55.

```

BBC

THIS PROGRAM will give you an insight into the graphical possibilities of the BBC micro-computer. It starts in a living-room of a house, with a television in one corner showing *The Space Programme* where you are about to

witness the take-off of an *Apollo* rocket into space. It lands on the moon's surface, takes off again, orbits the earth and plunges into the sea awaiting rescue.

The program is designed for the B machine but with small modifications will be able to run in lower modes. Converters to lower modes should note that lines 50, 170, 320 and 400 are where modes are set and text and graphic windows are defined. Sound has been incorporated for added realism.

Line 50 makes the screen white by drawing two

triangles and filling them in using the Plot 85 command.

60 to 70 give the room its walls and ceiling. 80 to 100 draw the plush carpet on the floor. 110 to 270 draw the television, door, picture, etc. Line 170 defines the text window — see VDU statements in manual.

Line 320 defines the graphics window. 330 to 380 are the calls procedures. The main body of the program.

390 to 420 ends the program resetting windows. 430 to 440 clear the television's screen.

(continued on page 93)

WHAT PEOPLE ARE SAYING ABOUT OUR ... **BBC MICRO GAMES**

"... I bought all your tapes to date for the BBC Micro and I think they are just super, especially STAR TREK, and the sound effects in CANDY FLOSS really made me sit up! Well done and keep them coming!"
J. S., Paisley

"... I was very impressed, not only with the cassette, but also at the speed at which it came!"
— R.L., Cheshire

"... I must congratulate you on your MUTANT INVASION cassette. I have had it for two weeks now and it is really superb. Incidentally, I have beaten your high score of 4,500 — mine is 7,580!"
— S.L., Berks

GAMES FOR MODELS A AND B

CASSETTE ONE

(i) **STAR TREK.** A superb version with 8 x 8 Galaxy, Klingons, Phasers, Torpedoes etc.
(ii) **CANDY FLOSS.** A tremendous new game in which you run a candy floss stall on Blackpool's Golden Mile. But watch the weather and the donkeys!
ONLY £5.95 inc.

CASSETTE TWO

Contains an exciting collection of games with music and graphics to keep the family amused for hours: **HANGMAN** (in which you can even enter your own category), **KRYPTOGRAM**, **DICE**, **BEEBLE**, **GRAND NATIONAL** and **MUSIC**.
ONLY £3.95 inc.

CASSETTE THREE

Contains, for the arcade fanatics, — **MUTANT INVADERS.** A brilliant new "Space Invaders" type game. Can you destroy the mutants before they land and try to destroy you with their radioactivity.
WARNING — VERY ADDICTIVE!
ONLY £5.95 inc.

CASSETTE FOUR

Contains **BREAKOUT.** A terrific version of the popular arcade game. Practice your wall demolition with 6 skill levels and 1 or 2 player option!
ONLY £3.95 inc.

GAMES FOR MODEL B ONLY

CASSETTE FIVE

Contains **BEEBUNCH.** Our version of the record breaking 'Pacman' arcade game, and we believe one of the best versions available. Stunning hi-resolution colour graphics including multi-ghosts, tempting fruits, super points, screams etc. Liven up your micro with this tremendous game.
ONLY £5.95 inc.

CASSETTE SIX

Contains **SUPER HANGMAN.** The special feature of this version is the hi-resolution animated man. Watch the expression on his face change as the noose tightens around his neck. Marvel at the detail of his clothing — but don't take too long, he grows very impatient! Contains many categories from educational to just plain fun!
ONLY £3.95 inc.

CASSETTE SEVEN

Contains **3-D MAZE.** Pit your wits against the computer's logic in this highly realistic graphical game. The computer sets up logical mazes (you choose the size). And then it shows the view you have of the maze in 3-D each step you take as you battle against the clock to escape!!
ONLY £3.95 inc.

ALL CASSETTES AVAILABLE NOW FROM: SINCLAIR (I. J. K. Software)

(All our software is available before we advertise)

55 Fitzroy Road, Bispham, Blackpool, Lancs

VIC 20

16K

ZX81

SUBSPACE STRIKER ... It comes from out of nowhere and then vanishes back into the shadows. With your deadly Antimat torpedoes, you unleash havoc in the Federation spacelanes.

STARQUEST ... A voyage of discovery and adventure in the cosmos. With the help of your onboard computer, you seek a habitable planet amidst the perils of deep space.

ENCOUNTER ... Would you know what to do if you were abducted by alien beings? In this game the space invaders play YOU!

TRADER ... A Trilogy of full 16K programmes that are chained to give a fantastic 48K graphic adventure. As an intergalactic trader you seek your fortune and deal with some very bizarre customers indeed.

Pixel games are a delightful change from the usual arcade rip-offs. Full screen animated graphics and good value too at only £9.50 for VIC 20 and £5.50 for ZX81 per 16K game. Trader is £10.50 for ZX81 only at present. Ask your dealer now or send to us for tapes by return of post.

Pixel Productions 39 Ripley Gdns., London SW14 8HF

adventure

SPECTRUM ZX81 BBC nascom

Colossal Adventure .. 16K/32K .. £8/£10

The classic mainframe game "Adventure", with all the treasures and creatures of the original. And with 70 extra rooms!

Adventure Quest 16K/32K .. £8/£10

From the Great Forest, up Orc Mountain, braving fire, swamp and caverns on a quest against Tyranny. Face vampires, demons, wizards, 200-foot worms...

Adventure games are fascinating. You enter English phrases and the computer acts as a window to worlds of magic.

Every Level 9 adventure has over 200 individually described locations and a game may take weeks to solve! Only our combination of data and code compaction allows so much to be provided.

FREE P&P. NO VAT. Money back if unhappy. Supplied on TDK cassettes. Send order, describing your computer, or a SAE for full details of all our programs to:

LEVEL 9 COMPUTING

229 Hughenden Road, High Wycombe, Bucks

SOFTWARE FILE

(continued from page 91)

450 to 600 are the re-entry Procedure and draw Earth and the rocket orbiting.
610 to 650 are the wait Procedure, and delay the program for "s" seconds.

660 to 740 are the take-off Procedure and draw Cape Canaveral with its launch-pad and rocket, and after a 10-second countdown ignition commences.
750 to 810 make the rocket travel through the

void of endless space, forever coasting.
820 to 950 draw the moon and make the lander craft descend, land and take-off again ready for its trip back to Earth.
960 to 1070 create the final descent to Earth.

SPECTRUM

PROGRAMMING THE user-definable graphics on a ZX Spectrum is not as easy as some would have you believe. For each character, a total of eight Pokes are needed. Also, you need to work out the design on a piece of paper beforehand, and then convert to binary.

This program makes both tasks much simpler. You decide the key you want the graphic to be on — any of the letters from A to U — and enter it in response to the prompt.

Then you can enter the design on a grid on the screen. The usual cursor keys move the flashing cursor over the grid — you cannot move out of it — while 1 and 2 enter or erase a point respectively. Finally, pressing 0 enters the graphic into the character set.

The first thing you see on running the program are the instructions, which can be ignored by pressing any key. There are several separate routines in the program. These are:
Lines 10 to 20: these set up the variables and call the instructions.

Lines 30 to 50: these draw the grid on the screen.
Line 60: clears the array holding the character information, and asks for the character.

Lines 100 to 160: move the cursor, fill in the appropriate spaces, and check if the zero key

is pressed. If so, the character-setting routine is called.

Lines 500 to 540: find out if another graphic is wanted. If so, run again; if not, stop.

Lines 1000 to 1030: instructions.

Lines 2000 to 2070: enter the graphic into the character set. If this is changed to suit your machine, the rest of the program can be changed easily to fit a BBC Micro, Vic-20, or another micro with programmable characters.

Note lines 20, 150, 530 and 2070 are acceptable in Sinclair Basic, but the variables would have to be entered in lower case to work on a BBC, and on other micros, changed to normal numbers. I use this trick to make programs more readable, and hope that others will take up the idea. (continued on next page)

ZX-81

MY PROGRAM for the 16K ZX-81 extends the character set of the printer to upper- and lower-case letters, plus the additional characters ! and & and %. Before typing it in, you should change RAMtop to 31744, by Poking 16389,124 and 16388,0.

The main body of the program is used in initialising the array of L\$, which holds the characters. There is still plenty of memory left after this program if you want to use it as part of a main program. Line 90 shows how to incorporate it into a larger program.

When using the program the following characters are allowed:

CHR\$ 0 to 63: normal symbols and alpha- numerics

Inverse video A to Z for lower case a to z; to the power of ; %; and !

AND: shifted 2 for &

Each element in the array of L\$ is one character and each is eight characters long. As you may find some confusion about which character is being used in the listing here is an alternative set out of the codes of the characters used in tabular form.

Finally, you may be forgiven for thinking that this program is rather laborious to enter.

However, as you can see, the results are well worth it. Also by creating your own characters, a whole new field of uses for the ZX-81 and printer reveals itself.

Character in L\$(8)

If we take for example the letter h, the numbers vertically, 1 to 8, are the character positions in the element of the L\$ array. The numbers along the bottom, 7 to 0, represent the dot above of each column. We raise 2 to the power of this number if we want the dot to be on, and sum the numbers for each row to give the character. Thus, for h:

CHR number	Code
1	0
2	0
3	$2^6: 64$
4	$2^6: 64$
5	$2^6 + 2^5 + 2^4 + 2^3: 120$
6	$2^6 + 2^2: 68$
7	$2^6 + 2^2: 68$
8	0

Characters used in L\$ array.

Array number Codes of characters used:

1	0 0 56 4 60 68 60 0
2	0 0 64 64 120 68 120 0

Automatic Rem

K Young,
Watford,
Hertfordshire.

ZX-81

WHEN USING machine code on a ZX-81, it is usual to put the code in a Rem statement. If a long Rem statement is required and one is not available on tape, you must type one in from the keyboard. This soon becomes tedious and time-consuming as, even in fast mode, the ZX-81 slows down considerably as the line length increases.

The program enables a large Rem to be created quickly. In use any long program is

loaded from tape, and then appended with line 1 and lines 9000 to 9120. Goto 9000 is typed to run the program, which expands the Rem of line 1.

```

1 REM EXPANDER
9000 PRINT "HOW MANY BYTES REQUIRED?"
9010 INPUT N
9020 LET L1=PEEK 16511+256*PEEK 16512
9030 LET L2=PEEK (L1+16515)+256*PEEK
(L1+16516)
9040 LET L3=L1+L2+4
9050 LET X=INT (L3/256)
9060 POKE 16511,L3-256*X
9070 POKE 16512,X
9080 POKE L1+16512,0
9090 IF L1+L2+2<N THEN GOTO 9020

```

```

9100 POKE 16514,118
9110 POKE 16515,118
9120 PRINT "REM LENGTH =";L3/2;"BYTES"

```

If you attempt to create too large a Rem, then the expander program is over-written, causing an error before completion. If no suitably large program is available on tape, or no tape recorder available, then the following procedure can be used.

Type in or load the expander program, type in a short Rem in line 1, edit this to give an identical line 2, run the expander typing 1 at the input. This effectively doubles the length of line 1, and the procedure may be repeated, doubling the length of the Rem every time.

Filing point

S A Nicholls,
Keynsham,
Bristol.

ZX-81

THIS SHORT machine-code program may be of use to all ZX-81 owners who, like myself, have less than 3.25K RAM, and wish to set up a display file without using up too much of their precious RAM. A 22-line by 32-column file is set up in about two seconds, and uses about half the memory of its Basic counterpart.

The program is entered direct from the keyboard and can be edited to give any size and character display. I have underlined any keywords used and all but Clear and Pause can be entered directly. To enter Clear and Pause first type Then Clear and Then Pause and using Rubout delete the word Then in each case.

```

Derbyshire.

GENIE

I WROTE this small program on a Genie which allows statements such as

Z\$=Z\$+T\$

This will need changing for other Basics. The aim of the program is to provide a multiple-character response to a single key-

stroke which I find very useful when using Impakt and LDOS.

Other features that could be added are a routine to change the phrases called during running time; a help call to display the phrases available and perhaps graphics.

SPECTRUM

GOLF, WRITTEN for the ZX Spectrum, is great

fun to play. I used the ATTR function to work out what was in any particular square. So, if you want to change either the Paper or Ink, or perhaps stop something flashing or brightening the screen, all the ATTR numbers will have to be changed accordingly.

The program asks you the direction, which

can be anything from 0 to 12. Direction 0 is straight up, 3 is to the right, 6 down, and 9 left. You then input strength on a 0 to 200 scale, depending on the distance of hole. If your ball falls into a bunker, do not despair; the computer will chip it out — but in a random direction.

Windmills

S J Bennett,
Scarborough,
North Yorkshire.

ZX-81

YOU HAVE BEEN sent by your firm to an island in the Outer Hebrides. Your task is to build windmills in the most profitable areas of the island. For each mill you build, you receive one lorry to transport corn and coal, to and from the mill.

Try to build your mills in areas where the wind conditions are good, and therefore use less coal for the donkey engine. The maximum number of years you can stay on the island is 50. For each year you stay you are given a report of the cost of coal, petrol and other expenses. Be careful of the price you charge

per bag of corn as the farmers may argue with you. When you decide to leave, you are shown the nett income for each year, and then a total for the full period on the island.

The island has been split into co-ordinates A to P inclusive, and 1 to 8 inclusive. To enter a mill, type number first, then letter. After entering your positions, you will be shown a display of weather conditions.

- 1 3P Windswept Area
- 2 4A Sheltered Area
- 3 6M Windy Valley

The first column is the mill; the second column the location; and the third the weather conditions for that area. After the weather conditions, you can alter the locations of any of your mills, or ask for a report on mills already built.

Here are the variables used.

- A = Control variable
- B = Control variable
- C = Coal used
- H = Corn harvested
- P = Petrol used
- MW = Miller's wages
- TA = Total expenses
- AE = Charge per bag
- YRT = Total years on island
- TC = Total coal used
- TP = Total petrol used
- XX = Tax paid
- ZA = Random number * 10
- ZX = Gross earnings
- D(B) = Distance variable
- X(B) = Letter co-ordinate
- Y(B) = Number co-ordinate
- Z(B) = Co-ordinates of mills built

Rem memory

Andrew Norman,
St Albans,
Hertfordshire.

ZX-81

LARGE REM statements are useful for storing machine code and databases. This simple procedure can generate very large Rem statements on an expanded ZX-81 without a repeat key.

The program combines lines 1 and 2, which may be of any positive length, into a single Rem statement at line 1. This may be dupli-

cated at line 2, using Edit, and the process repeated as often as necessary. Alternatively, store a Rem statement of convenient length at line 3 and duplicate at line 2 each time for more controlled growth of line 1.

I have produced a 12,000-character Rem statement with a 64K Super-Z board. Slightly larger statements should be possible by this method, with enough room in the first 16K for the program and display file.

- 1 REM (e.g., two full stops)
- 2 REM (e.g., four full stops)
- 10 LET TL1 = 256 * PEEK

- 16512 + PEEK 16511
- 20 LET LL1 = 4 + TL1
- 30 LET PTL2 = 16508 + LL1 + 3
- 40 LET TL2 = 256 * PEEK (PTL2 + 1) + PEEK PTL2
- 50 LET NTL = TL1 + 4 + TL2
- 60 POKE 16512, INT (NTL/256)
- 70 POKE 16511, (NTL - 256 * PEEK 16512)
- 80 POKE (16508 + LL1), 128
- 90 PRINT (NTL - 2); "AVAILABLE BYTES IN LINE 1"
- 100 PAUSE 200
- 110 CLS
- 120 LIST

COMPETITION CORNER

JAILBREAK

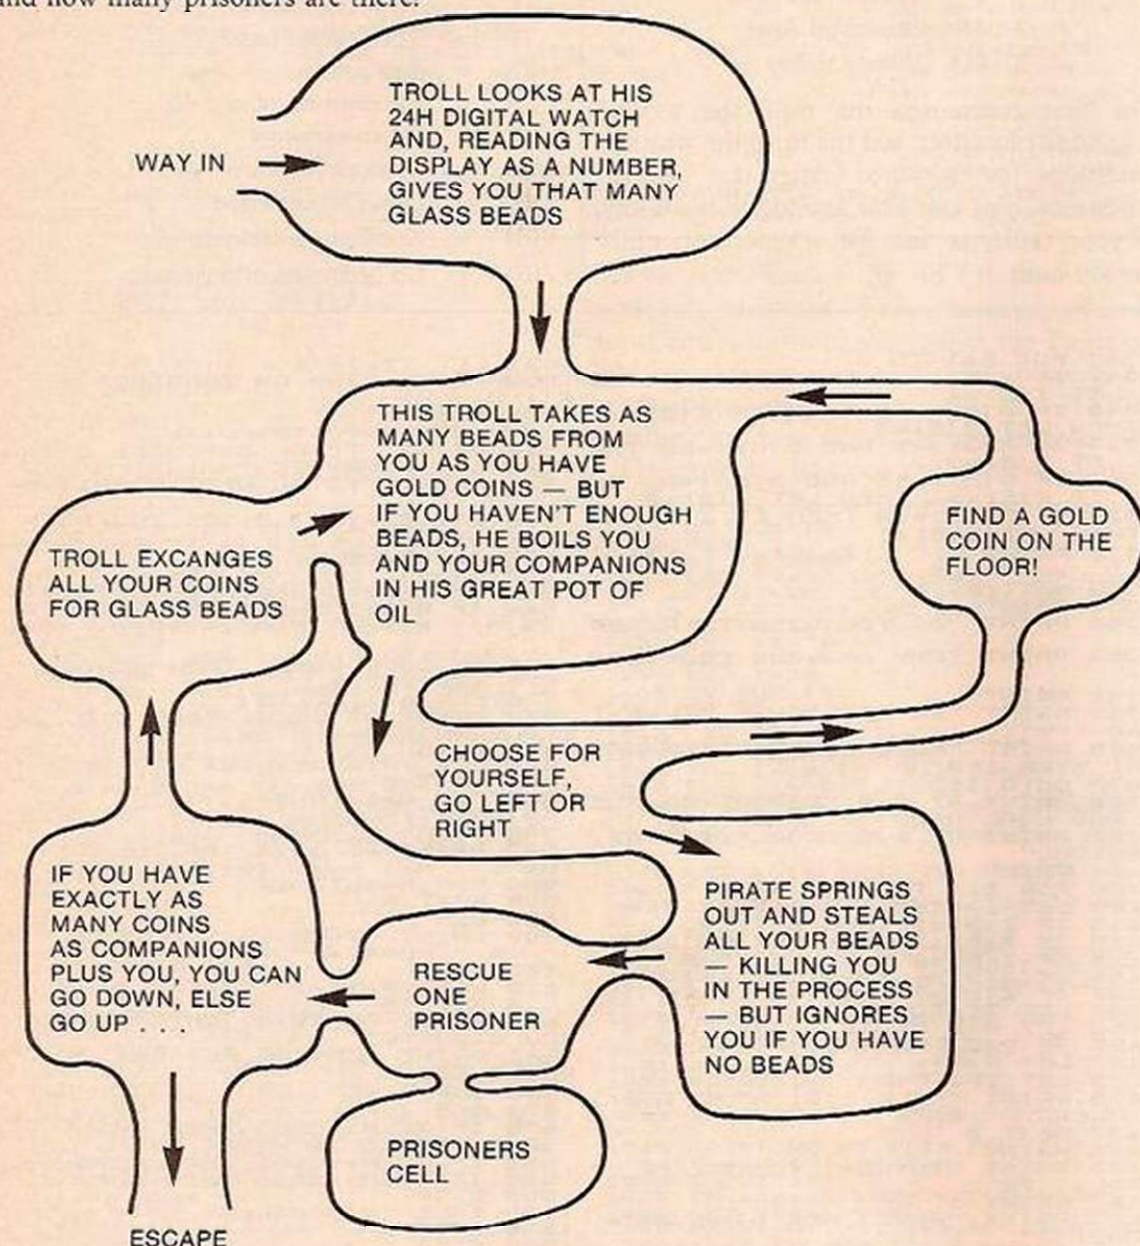

BY ANTHONY ROBERTS

AS USUAL, the Wizard One-eye has put you to the test: you must enter the trolls' cave system and try to rescue the Wizard's friends in the prisoners' cell.

It is clearly important to enter the first cave at just the right time. What time must that be, and how many prisoners are there?

A £15 book token will be awarded to the first correct solution drawn from the competition bag. All entries must be at the *Your Computer* offices by the last working day in September. The name of the winner, the solution, and a competition report will be published in the November issue of *Your Computer*.

If you want to set a competition for Competition Corner, remember that the simplest solution should be calculable by a short program rather than by any other form of reckoning.

Program to solve the Bird Catcher problem.

```

10 LET Z = 1
20 LET Z = Z + 2
25 LET N = Z
30 LET X = 1
40 LET X = X + 2
50 LET Y = X
60 LET A = 0
70 IF Y = 0 THEN 110
80 LET A = A + X
90 LET Y = Y - 1
100 GOTO 70
110 IF A > N THEN 190
120 LET Y = A
130 IF Y < X THEN 40
140 IF Y = X THEN 170
150 LET Y = Y - X
160 GOTO 130
170 IF B = 0 THEN 1000
180 PRINT "DONE IT"; Z
185 STOP
190 IF B = 1 THEN 1000
200 LET B = 1
210 LET Y = 2
220 LET N = N - 1
230 IF N = 0 THEN 260
240 LET Y = 2Y
250 GOTO 220
260 LET N = Y - 1
270 GOTO 30
1000 PRINT "FAILED"; Z
1010 LET B = 0
1020 GOTO 20
  
```

Z = INITIAL NUMBER OF CAGES; N = NUMBER OF CAGES DURING TRIP X = BLACKBIRDS;
Y = BLUEBIRDS; A = SONGBIRDS; B = PARROTS

Competition results

JULY'S COMPETITION drew almost 1,000 entries. Rainbow, Aurora, Eclipse, Harlequin, Senator, Parrot, Tardis, Lakertron, Arthur Ascii, Sinclair Power Pixie were some of the names suggested for the Spectrum. We awarded the prize of a ZX Spectrum to R Burgess, 51 Constance Crescent, Hayes, Kent for his "Spectre — there is only a ghost of a chance of seeing one". This was not the only entry suggesting "Spectre", just the lucky one.

Other entries were more rapturous, like the "Miracle" and the "Dazzler", but I Hunt's "the Messiah because it's a Godsend" seemed to be carrying admiration too far. Some people thought the Spectrum should have been called ... the Spectrum. As R Fletcher added "now there's a coincidence".

More original was A Swale with "the Botham, the great all-rounder that hits the opposition for six", while G Robbins thought the Spectrum should have been called "to my attention earlier". The last word must go to G Wright for his "Rom Greenwood — this time we will get it right".

A number of people pointed out an inconsistency in the rules for July's Bird Catcher problem. The box beginning "If you have a parrot ..." tells you to release all but two of your blackbirds, but by this stage you will have already released all your blackbirds. This understandably deterred most people from proceeding further.

If you ignore the inconsistency and assume that you can exit from the box with two blackbirds, a solution is possible. The following program translates each instruction into a Basic statement and gives an answer of 13 cages. Line 210 translates the amended instruction. The closest solution came from J Clark, 32 Bencombe Road, Purley, Surrey, CR2 4DG, who has been awarded the £15 book token.

Solution to the July crossword.

WHAT'S YOUR GAME?

FOR OWNERS OF ZX81, SPECTRUM, BBC MICRO, ATOM, COLOUR GENIE, VIC.

Bug-Byte games are best sellers. Tens of thousands of contented customers testify to that, so do consistently hot reviews in the popular micro-press. If your game isn't shown, don't worry, we probably have more quality games for more machines than any other software house - we just couldn't fit them all in. Bug-Byte games are available at good computer shops everywhere, or direct from our Liverpool office.

NEW ATOM

TORPEDO RUN

Another fantastic high resolution (clear 4) real time game for the "Atom". Can you complete your mission and destroy the enemy convoy? Will you return to a heroes welcome or is Davy Jones Locker your final resting place!!!

5K Text 6K Graphics

Price £4.95

ESCAPE

The invader P.O.W.s are out for exercise. You, a guard have to catch them, enthrall and frustrate your family all at the same time.

5K Text 3K Graphics

Price £4.95

NEW

CYCLON ATTACK

A FAST MOVING 3D SPACE BATTLE

As you sit in your starfighter looking out into the void of space remember the CYCLON race only want Mankind for food!! You glance up at your long range scanner, the CYCLON fleet is in range. Quickly you select a target and turn to meet it ready to defend Earth to the end!!

5K Text 6K Graphics

Price £4.95

MISSILE COMMAND

A fast moving version of the popular arcade game. You have three bases from which to fire your defence missiles, protecting your cities and bases from the missiles and aircraft attacking you!!

SCORE/HI SCORE/MULTIPLE LEVELS/SOUND

5K Text 6K Graphics

Price £4.95

POLARIS

Your submarine is ordered to sink an enemy convoy. By using skill, cunning and strategy can you avoid the escorting warships and dangerous shallows to succeed with your mission?

5K Text 6K Graphics Price £3.95

*SPECIAL OFFER, DEDUCT £1 PER ADDITIONAL CASSETTE ORDERED

BBC MOD B ONLY

A superb reproduction of the popular arcade game: Four skill levels, realistic sound and fantastic graphics. Long range and close up Luna Landscape Displays. A safe soft landing is your target. But can you do it?

PRICE ONLY £6.00

THE Northern Computer Fair

Personal computers
Home computing
Small business systems

MANCHESTER,
NOV 25-27

Bringing it all back home...

...to Manchester, birthplace of computing in Britain. To Belle Vue from November 25th to 27th — the obvious place for the Northern Computer Fair.

Following the incredible success of our London show 'the biggest-ever personal computer exhibition' where over 38,000 people visited us in 3 days, we're going to repeat the performance in Manchester.

Whatever your specialised line of business — personal computers; home computing; small business systems; associated software — this is the exhibition designed for you.

It's the ideal showcase for companies who need to demonstrate to a fast expanding and increasingly well informed audience all aspects of personal computing.

...you cannot afford to ignore it.

For further details about exhibiting at the Northern Computer Fair, contact the Advertisement Manager, Your Computer, Room L215, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS. Telephone: 01-661 3127.

Don't let its size fool you.
If anything NewBrain is like the Tardis.

It may look small on the outside, but inside there's an awful lot going on.

It's got the kind of features you'd expect from one of the really big business micros, but at a price of under £200 excluding VAT it won't give you any sleepless nights.

However, let the facts speak for themselves.

You get what you don't pay for.
NewBrain comes with 24K ROM and 32K RAM, most competitors expect you to make do with 16K RAM.

What's more you can expand all the way up to 2 Mbytes, a figure that wouldn't look out of place on a machine costing ten times as much.

We've also given you the choice of 256, 320, 512 and 640 x 250 screen resolution, whereas most only offer a maximum of 256 x 192.

Big enough for your business.
Although NewBrain is as easy as ABC to use (and child's-play to learn to use) this doesn't mean it's a toy.

Far from it.

It comes with ENHANCED ANSI BASIC, which should give you plenty to get your teeth into.

And it'll also take CP/M® so it speaks the same language as all the big business micros, and feels perfectly at home with their software.

NO OTHER MICRO HAS THIS MUCH POWER IN THIS MUCH SIZE FOR THIS MUCH MONEY.

So as a business machine it really comes into its own.

The video allows 40 or 80 characters per line with 25 or 30 lines per page, giving a very professional 2000 or 2400 characters display in all on TV and/or monitor. And the keyboard is full-sized so even if you're all fingers and thumbs you'll still be able to get to grips with NewBrain's excellent editing capabilities.

When it comes to business graphics, things couldn't be easier. With software capabilities that can handle graphs, charts and computer drawings you'll soon be up to things that used to be strictly for the big league.

Answers a growing need.

Although NewBrain, with its optional onboard display, is a truly portable micro, that doesn't stop it becoming the basis of a very powerful system.

The Store Expansion Modules come in packages containing 64K, 128K, 256K or 512K of RAM. So, hook up four of the 512K modules to your machine and you've got 2 Mbytes to play with. Another feature that'll come as a surprise are the two onboard V24 interfaces.

With the aid of the multiple V24 module this allows you to run up to 32 machines at once, all on the same peripherals, saving you a fortune on extras.

The range of peripherals on offer include dot matrix and daisy wheel printers, 9", 12" and 24" monitors plus 5 1/4" floppy disk drives (100 Kbytes and 1 Mbyte) and 5 1/4" Winchester drive (6-18 Mbytes).

As we said, this isn't a toy.

It doesn't stop here.

Here are a couple of extras that deserve a special mention.

The first, the Battery Module, means you won't be tied to a 13 amp socket. And, even more importantly, it means you don't have to worry about mains fluctuations wreaking havoc with your programs.

The ROM buffer module gives you a freedom of another sort.

Freedom to expand in a big way. It gives you additional ROM slots, for system software upgrades such as the Z80 Assembler and COMAL, 2 additional V24 ports, analogue ports and parallel ports.

From now on the sky's the limit.

Software that's hard to beat.

A lot of features you'd expect to find on software are actually built into NewBrain so you don't need to worry about screen editing, maths, BASIC and graphics.

However, if you're feeling practical you can always tackle household management, statistics and educational packages. And because NewBrain isn't all work and no play, there's the usual range of mind-bending games to while away spare time.

Waste no more time.

To get hold of NewBrain you need go no further than the coupon at the bottom of the page.

With your order we'll include a hefty instruction manual so you'll know where to start, and a list of peripherals, expansion modules, and software so you'll know where to go next.

® CP/M is the registered trade mark of Digital Research Inc.

NewBrain, Grundy Business Systems Ltd., Grundy House, Somerset Road, Teddington TW11 8TD.

Each NewBrain order will include a FREE comprehensive user manual, a catalogue of expansion modules and peripherals, and a detailed list of available software.

Please send me the following:-

Quantity	Item	Price per item (Inc. VAT & p&p)	Total
	NewBrain A	£233.00	
	NewBrain AD with onboard single line display	£267.50	
	Printer	£466.00	
	Monitor 12"	£142.50	
		Total £

Sponsored by Practical Computer and Your Computer

Meet some of the best brains in Britain

at **THE**
**Northern
Computer
Fair**
*Personal computers
Home computing
Small business systems*

**BELLE VUE, MANCHESTER
NOVEMBER 25-27, 1982**

Opening Times 10am-6pm each day

The brains we're talking about are the printed circuit, silicon-chip variety and you'll find them (thinking hard) in the vast range of exhibits at The Northern Computer Fair. The show covers the fields of personal computing, home computing, small business systems and associated software, through computer books to video games, with a special attraction being the ZX 81 Sinclair Village. So whether you're a businessman (or woman) who needs to keep up to date with the latest developments in this fascinating field, a die-hard computer enthusiast, or simply interested in the subject, you'll find what you're looking for at the Northern Computer Fair.

Ticket prices at the door are £2.00 for adults and £1.00 for children under 16, but special party rates are available for 20 people or more with the organiser admitted free. For more information contact IPC Exhibitions, Surrey House, 1 Throwley Way, Sutton, Surrey SM1 4QQ. Tel: 01-643 8040.

A bigger range than the Himalayas

The Acorn Atom From £118 plus VAT.

Personal Computing – Instructional and Fun

To get the best out of personal computing you need two things – hardware that is powerful and reliable – software that uses the hardware to the full. The Atom range is just that.

The Atom – tried and tested

The Atom was designed to last – inside and out. Outside a rugged, high impact case with a proper keyboard. Tested to withstand children as well as adults. Inside a powerful operating system that will never be bettered. It is available in several versions so you can choose what you want. And there is an enormous range of additional boards that fit inside the casing – start where you like – add more power, more versatility when you need it.

The Accessories – something for everyone

Diskpacks, printers, monitors, plug-in ROM's, manuals, other languages, arcade-type games, business and household software. Whatever you want to do – teach your children, run your business – you can't do better than choose the Atom range.

Available Nationwide

Not just mail order, the Atom range can be bought through a national dealer network – they will help and advise you. And in the unlikely event of breakdown they will be there. Like our equipment Acorn Computers are here to last.

ADD ON, PLUG IN, PRINT OUT

AMBER 2400 MATRIX PRINTER

the flexible print out facility for home computers.

At long last it's possible for every home computer user to have a hard copy of program listings. The AMBER 2400 Matrix Printer is the first low-cost complete printer with the flexibility of parallel or serial inputs to make it compatible with most home computers.

Priced at just £69.99 plus VAT, the AMBER 2400 is available for the first time this August and has a most impressive specification.

- 24 characters per line standard text
- Full graphics capability - each dot is individually programmable
- Conventional 25 pin 'D' type plug
- Serial and parallel input
- CTS/Busy output
- Serial baud rate selectable from 75 to 9600 baud
- Mains Powered
- Injection moulded case for strength
- Size of just 80mm x 160mm x 160mm (H x W x D)
- Uses low-cost plain paper rolls (90ft for 45p)
- This is not a thermal or spark discharge type printer

This is the printer you need, write now telling us what computer you use, including a SAE, and we'll send you the AMBER 2400 Matrix Printer leaflet. We're also accepting advance orders for the AMBER 2400.

ZX Spectrum

20 Programs £6.95

The ZX Spectrum has brought advanced computing power into your home. The Cambridge Colour Collection, a book of 20 programs, is all you need to make it come alive.

No experience required. Simply enter the programs from the book or load them from tape (£2.95 extra) and run.

Amazing effects. All programs are fully animated using hi-res graphics, colour and sound wherever possible.

Entirely original. None of these programs has ever been published before.

Proven Quality. The author already has 30,000 satisfied purchasers of his book of ZX81 programs.

Hours of entertainment

- **Lunar Landing.** Control the angle of descent and jet thrust to steer the lunar module to a safe landing on the moon's surface.
- **Maze.** Find your way out from the centre of a random maze.
- **Android Nim.** Play the Spectrum at the ancient game of Nim using creatures from outer-space.
- **Biorhythms.** Plot the cycles of your Emotional, Intellectual and Physical activity. Some would say this is not a game at all.

Improve your mind

- **Morse.** A complete morse-code training kit. This program will take a complete beginner to R.A.E. proficiency.
- **Maths.** Adjustable to various levels, this program is an invaluable aid to anyone trying to improve their arithmetic.

Run your life more efficiently

- **Home Accounts.** Keeping track of your finances with this easy-to-use program will enable you to see at a glance where the money goes and plan your spending more effectively.
- **Telephone Address Pad.** Instant access to many pages of information.
- **Calendar.** Displays a 3 month calendar past or future, ideal for planning or tracing past events.

JUST
LOOK AT
THESE
FEATURES

This is NOT a mere simulation. This is an exciting and highly enjoyable game in which you play the part of a Football Manager coping with the problems and decisions involved in running your club. There are so many features it is impossible to list them here but included are form (top teams NORMALLY win), giant-killings, wage bills to pay, and you can even be sacked! It is a game requiring a great deal of skill, and people play it for literally hours on end (we have PROOF!).

WE GUARANTEE that this is one of the best computer games you've ever played!

BUT BEWARE, this game is extremely addictive!

PUCKMAN

The all new fast moving machine code game for the VIC-20 that's taking the U.S.A. by storm. Devour the dots in the maze but watch out for those ghosts. You can chase them if you eat a power pill but be quick, the effect doesn't last for ever and they will be after you once again. Points for all those dots will add up to a bonus life and you have three lives!!! Great fun for all the family. On side one you have a keyboard version, and on side two the new joystick control.

DIVE BOMBER

You have on board your damaged fighter plane, a supply of bombs. You must guide them to the enemy city below and clear the ground for the plane to land. As you improve, the game begins to get more and more difficult with buildings getting higher and fuel dropping lower as you manoeuvre. Keyboard and joystick controls.

All on the 3.5K VIC-20 from

Spectrum and BBC Software will be available in a short time and dealer enquiries will be welcomed. We are also interested in hearing from writers of high quality software for this category of hardware. Please send a demonstration copy for a quick reply and we will advise you on the marketing possibilities.

What's

all about?

Information Technology

Peter Zorkoczy

This is the year of Information Technology.

What is Information Technology? Where did it come from? How did it develop? Where is it going? What can it do? How does it do it?

This new book gives straightforward, no-nonsense answers to these questions. No specialist knowledge is assumed. Order it now.

Paperback/152 pages/Published September 1982.

HEWSON CONSULTANTS

SPECTRUM

HINTS AND TIPS FOR THE ZX81 by Andrew Hewson £3.95

The most complete book at the price

Good value and quite fascinating... a very inexpensive way of acquiring months of programming experience. Your Computer Nov 1981

80 pages explaining how to squeeze a computing quart out of a Sinclair pint pot. Saving Space - vital reading for all ZX81 users. Understanding the Display File - using the display file as memory, clearing a part of the display, using tokens in PRINT statements. Converting ZX80 programs - explaining simply but comprehensively how to convert the hundreds of published ZX80 programs. Chaining programs - revealing techniques for passing data between programs, calling subroutines from cassette and establishing data files. Machine Code Programs - all you want to know about ZX80 machine language. Explaining how to write, load, edit and save machine code and how to debug your routines. Routines and programs are scattered liberally throughout the text and the final chapter consists of 12 useful, interesting entertaining programs such as LINE RENUMBER, BOUNCER, SHOOT, STATISTICS etc.

16K MEMORY

THE BEST VALUE FOR MONEY 16K RAM on the market. Coming complete with case, simply plugs into the port at the back of your Sinclair. Money back guarantee.

£24.95

48+8K NEW

0-8K *Sinclair Rom
8-16K *The contents of this area of RAM are unaffected by loading programs from cassette. Can be used to store machine code routine or to store data for use by more than one program.
16-32K *Basic program area and display file.
32-64K *Variable and array area. Massive memory area for storage of data.
*Directly addressable and user transparent.
*Facts sheet FREE with each RAM purchased.

£61.95

64K MEMOPACK

0-8K *Same as 48+8K
8-16K *Can be switched out in 4K blocks to leave room for memory mapping and vacant addresses for graphics etc ROMs. The contents of this area of RAM are unaffected by loading programs from cassette. Can be used to store machine code routine or to store data for use by more than one program.
16-32K *Same as 48+8K
32-64K *Same as 48+8K

£79.00

SPECTRUM SOFTWARE AVAILABLE NOW! SPACE INTRUDERS FOR THE ZX SPECTRUM

Features include:

All this yours for only

£5.95

Z80 OP CODES

£1.45

A must for the beginner and the experienced programmer alike. This handy ready reckoner lists all 600 plus Z80 machine code instructions in decimal and hexadecimal with their mnemonics. Each Op Code is succinctly explained and cross-referenced. Supplied in a protective transparent wallet for easy reference and durability.

PROGRAMMERS TOOLKIT FOR THE ZX81

£6.50

The Programmer's Friend and Slave! Are you writing your own programs for the ZX81? How can you do that without our Toolkit? It will encourage you to go on to write bigger, better and more sophisticated programs by doing your dirty work.

Simply create 3K of space above Ram top and then load the Toolkit in the normal way. The Toolkit hides above the Ram top awaiting your command. You can now load existing programs from cassette for the Toolkit to operate on. Or type in a whole new program!

Toolkit functions include:
* RENUMBER including the destination lines of GOTO's and GOSUB's.
* START and Finish lines and Step size specified by you.
* DELETE part or all of a program at your command.
* REPLACE characters (or tokens) with an equal number of others specified by you.
* EDIT to create subroutines at a stroke by moving blocks of basic program lines.
* FIND a basic program string specified by you.
* INPUT prompts for a two digit hexadecimal code and pokes it in at a specified address.
* Separate version available for 48+8 and 64K memories (resides at 8192).

LINE RENUMBER £4.95 FULL LINE RENUMBER RESIDES ABOVE RAMTOP

PUCKMAN NEW! FOR THE ZX81

£5.95

- All action display
- Scour the maze for food
- Dodge the ghosts who come to devour you
- Automatic option - the machine plays itself
- Full keyboard display
- Full instruction display
- Continuous scoring
- Beat the best score to date
- Super graphics when used with Quick Silva graphics board

PILOT ★ FOR THE ZX81 ★ NEW!

£5.95

New and exciting. Pilot challenges you to take off, fly between beacons, then land whilst watching wind speed and dodging craggy mountains - either could lead to disaster! If you take the challenge, you may soon learn to fly solo - so detailed are the flying instructions. Coast along in Autopilot - just to gain confidence, then battle your way through 6 further modes, 6 different ways of trying to steer your plane safely back to base, increasing in difficulty, testing your skills. Good luck with your fight against the unpredictable elements!

MANAGEMENT GAMES AIRLINE

Can you compete with British Airways? You must decide on the number of
aircraft to operate, whether to buy or charter, whether to enter into a loan or a
fuel contract and the levels of staffing and maintenance. Problems
encountered are tax demands, strikes, cancelled flights, hijacks and aircraft
crashes.

AUTOCHIEF

As MD of a Catering Company you must negotiate for leases, decide on menu
prices, level of wages, advertising and dividends. Each year you must predict
the inflation rate. You are also given options on consignments of wines and
food and loan contracts. You will be made to resign if you are not successful.
There are 3 levels of difficulty.

PRINT SHOP

You own a small printing company and are required to decide on (a) the
number and type of staff you employ and when to increase or reduce staff
(b) the amount and type of paper you stock (c) the week in which work is
scheduled (d) the quotation for each job. Are you an entrepreneur? Test your
business acumen to the limit! There are 3 levels of difficulty.

These simulations are realistic and are not only fun to play but are educational.
The user will learn to interpret Trading Profit and Loss Accounts and Balance
Sheets. Our programs are very comprehensive and fully utilise the memory.

ALL PROGRAMS INCLUDE DETAILED INSTRUCTIONS.

£4.75 for one, £8.00 for any two or £12 for three.

ZX81 GAMES

from

J.K. GREYE SOFTWARE LTD
THE NEW GENERATION SOFTWARE HOUSE

"Without question the finest machine code games available
today"..... J.N. ROWLAND Product Manager for W.H. SMITH.

GAMESTAPE 1 for 1K only £3.95
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER,
GUILLotine, KALEIDOSCOPE, etc.
PROBABLY THE BEST VALUE 1k TAPE AVAILABLE.

We've done in 1k, games which some of our competitors
require 16k to do!

GAMESTAPE 2 for 16K only £3.95
***STARFIGHTER** Superb machine code Space Battle. Set
against a background of twinkling stars, with stunning
explosions - if you can hit the enemy!
PYRAMID Can you move the Pyramid? Make a mistake and
it will collapse! A Thinkers game.
ARTIST The ultimate Graphic Designers aid. 8 Directions, 10
Memories. SAVE, COPY, RUBOUT, CLS, etc.

GAMESTAPE 3 for 16K only £4.95
***CATACOMBS** A Multi-Level Graphics Adventure. Each
level can contain up to 9 Rooms, 8 Passages, 7 Monsters,
Food, Gold, Traps, Phantoms, an Exit (to the next level),
and there's an infinite number of levels.
NOTE: ... This is NOT one of the necessarily limited text
Adventures as sold elsewhere.
"An excellent addictive game which will keep you amused
for hours"..... COMPUTER & VIDEO GAMES.

GAMESTAPE 4 for 16K only £4.95
***3D MONSTER MAZE** The Game to Top All Others.
Unbelievable Graphics! Can you find your way through the
Maze? The EXIT is there somewhere, but then so is a T.REX,
and its after YOU! All in 3D (the T.REX will actually run
towards you in full perspective!), you've never seen anything
like this before!
"3D MONSTER MAZE is the best game I have seen for the
ZX81"..... COMPUTER & VIDEO GAMES

"If I had to choose just one programme to impress an audience with the capabilities of
the ZX81, then J.K. Greys 3D MONSTER MAZE would be the one without doubt"
..... ZX COMPUTING. "Brilliant, brilliant, brilliant!"..... POPULAR COMPUTING WEEKLY

GAMESTAPE 5 for 16K only £4.95
***3D DEFENDER** The Ultimate Space Game. Super fast
Machine Code 3D version of the Arcade favourite. You have
to save your home planet from the marauding Alien Spacecraft.
This is all in 3D, your viewscreen shows you the view out
of your fighters cockpit window. The backdrop moves when
you turn, or fly up or down (8 flight directions), just as if you
were really flying it! But then YOU ARE! The Enemy Saucers
will actually zoom towards you in 3D, and shoot you if you let them! Your display
includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen,
which shows your rotating home planet, backdrop of Stars, Meteors, Explosions,
Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in
full 3D!

**A SMASH HIT at the ZX Microfair (most of the other software houses wanted a
copy), a game not to be missed!**

GAMESTAPE 6 for 1K only £1.95
***BREAKOUT** Super Fast Full Screen Display Game. Your
all time favourite with an added twist. See how much Money
you can win and watch the pounds convert to Dollars. All
in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes
and three angles of rebound! The best BREAKOUT around
and at this price you can't go wrong!

GAMES MARKED * INCL. MACHINE CODE.

Prices include VAT and U.K. P. & P.

TIMEDATA

ZX SPECTRUM HARDWARE 24 line programmable Input/Output Port

This new port has been designed exclusively for the ZX Spectrum and utilises MOS technology to minimise bus loading. The main features are:

- 3 x 8 bit ports
 - Port mapped using IN and OUT commands
 - 3 basic modes of operation
 - Direct Bit Set/Reset capability
 - Outputs capable of sourcing 1mA at 1.5 volts
 - Access via 3 x 16 pin DIL sockets and 28 way edge connector
- The port is available fully built together with a set of detailed instructions and suggested control applications. The port can either be used with our new Motherboard thus allowing a further card to be used, or with a stackable connector. Either way, it means that Micro-Drives, Printers etc. will run happily with the port.

ZX Spectrum PPI Port £16.50
ZX 2 Slot Motherboard £16.95
ZX Stackable Connector £5.50

The prices are inclusive of VAT but postage must be added at 70 pence for a single item (100 pence for 2 or more items).

Please note that we shall continue to support the ZX81 and that we also offer a 16 bit port for the 81 based on a Z80A PIO at £15.50 inc.

KEMPSTON ELECTRONICS

60 Adamson Court, Hillgrounds Road,
Kempston, Beds MK42 8QZ

ZX81 Klik-Keyboard

This is a full, forty key, moving keyboard which fits into the recess left after peeling off the existing 'touch-sensitive' keypad. Consider the following advantages:

- Positive feedback from keys
- Fits onto the ZX81
- No trailing wires
- No special case needed
- Elegant design with two colour legends

The fully built keyboard requires *absolutely no soldering* since two flexible connectors plug into the ZX81 sockets. Alternatively, the keyboard is available as an easy to build kit at a considerable saving. Other ZX81 products available include a two-tone keyboard bleeper (fits inside the case) at £8.95 built, and a Repeat key kit at £3.95. Now available with 41 keys, the extra key can be used to give a repeat or reset facility £26.50 (built) £23.00 (kit).

TOMORROW

The 5th Personal Computer Word Show this September will be the largest and most exciting microcomputing exhibition ever held in the UK.

There will be over 25,000 square feet of display space in the newest and most prestigious exhibition venue in the country.

It's the only micro computing show to offer literally hundreds of stands covering micros for home, business and educational uses. Previous visitors to the PCW Show will get some idea of the size of this year's event if we tell you that it will be approximately *three times* the size of last year's bash! (Last year's show was, in its turn, twice the size of the year before. Statistically minded persons will calculate that at this rate the PCW Show will cover the face of the planet by the year 1995.)

Features of The 5th Personal Computer World Show will include a Sinclair City and Acorn/BBC Arcade offering the very latest software and add-ons for these popular machines, computer chess competitions as always, and an opportunity for you to challenge a micro to a game of Computer SCRABBLE®.

From the business angle there's free consultancy with the National Computer Centre and more

The 5th
**Personal
Computer**
World
Show

50p

DISCOUNT VOUCHER

This voucher is worth 50p off the price of admission to the PCW Show. Only one voucher valid for each visitor. Not exchangeable for cash.

THE WORLD!

5th Personal Computer World Show

but if you bring along a coupon from PCW it's only £2.00 per person.

If you're a business user (or potential user) of microcomputers just write with your cheque for £2.00 (payable to the Personal Computer World Show) to Tim Collins, PCW Show, 11 Manchester Square, London W1, enclosing your business card. We'll send you a special 'Fast Lane' ticket to save you the trouble of queuing.

It really is going to be a great show with a tremendous variety of machines and software on display. Be warned, you'll need to make a day of it (remember we're open four days this year, not three as in previous years) so give yourself plenty of time and wear comfortable shoes! See you there. . .

demonstration machines and business software than you could get to see in a year at your own office. But you needn't risk divorce to evaluate them. . . your wife (or husband!) and the kids can be looking at the vast array of home and educational micros in one of the other halls. It's £2.50 to get in

CUT-PRICE COMPANIONS

"Far and away the best" — Your Computer magazine

THE ZX81 COMPANION by Bob Maunder is now available at **ONLY £4.95** with a **FREE SUPPLEMENT** on the ZX Spectrum! This offer ends on 30 September, so hurry!

LINSAC is also producing a **SPECTRUM COMPANION** series, and the first title, 'The Spectrum Games companion' is available from October at £5.95.

The above prices include UK postage. Send cheques to:

LINSAC LINSAC (YC),
68 Barker Road,
Middlesbrough TS5 5ES.

ZX Spectrum — ZX81

In 1981, ACS Software published ACSEMBLER and DIS-ACSEM. These are now generally regarded as quite simply the best assembler and disassembler programs available for the ZX81.

"The disassembler... is really fantastic." A.M., London
"I am very pleased with the assembler and I feel that you have a real winner in this program." R.B., Gloucester
Your programs are first class. Looking forward to more." A.J., Norway.

"... the single biggest step to proficiency in machine code programming." SINCLAIR USER

Now, with the superior facilities of the ZX Spectrum, ACS Software have done it again. **Ultraviolet** and **Infrared** are assembler and disassembler programs that will extend your Spectrum. Look at the facilities that Ultraviolet offers:

Works entirely in decimal (no hex problems); all Z80 instructions correctly assembled; supports the pseudo-instructions EQU, ORG (multiple ORGs allowed), DEFB, DEFW and DEFS; code can be assembled at one location and then re-located; allows alphanumeric labels of any length; full listings of assembled code and mnemonics can be output to the printer; full error trapping with faulty instruction clearly indicated; comments can be included in the source file.

So now there is no need to be intimidated by machine code - with Ultraviolet and Infrared it's child's play! Buy them from the machine code specialists - ACS Software.

ULTRAVIOLET - £7.50

INFRARED - £6.75

The following programming aids are available for the 16K ZX81 at £5.50 each. SAE for details. Prices include postage and packing for UK orders, overseas clients please add appropriate postage.

ACSEMBLER: DIS-ACSEM: ACS DEBUG: PROGSTORE: TOOLKIT:
PROGMERGE (version 2): TAPEKIT
PROGMERGE and TAPEKIT won't make a Spectrum out of your ZX81 but they will give it some interesting new facilities!

ZX-FORTH!

- *FULL FIG-79 STANDARD (NON-DISK)
- *FASTER THAN BASIC
- *EASIER THAN MACHINE CODE
- *SUPPORTS ZX-PRINTER

Forth, for those who are not already converts, is perhaps the closest yet to the ultimate all-purpose computer language. It is designed to be fast, portable and extremely flexible. A FORTH program consists, largely, of definitions of new FORTH words, enabling a user to develop a unique, application oriented, vocabulary. It is even possible to alter the syntax to suit your application (or just your style of program!).

*TAPE & DOCUMENTATION . . . £10

GAMES PACKS 1&2

106 Midway

Spectrum Software

MISSILE COMMANDER AND LUNAR LANDER

Missile Commander: defend your city against ICBM's streaming from the heavens, causing a series of multicoloured, noisy explosions. You must also deal with marauding enemy bombers. There are 10 skill levels, and/or on screen score.
Lunar Lander: falling towards the lunar surface your lander must be brought to a safe halt on the green moon. A new surface is generated on each run.
PRICE: £5.00

POLECAT AND BREAKOUT

Polecat: A completely original and ingenious maze program in which you are a rabbit and the computer is a Polecat. The action takes place in one of over a million underground mazes. The plot involves the rabbit collecting carrots and bringing them back to his burrow whilst avoiding the attention of the ravenous Polecat.
Breakout: See if you can bombard the wall until it falls, whilst trying to keep the ball in motion.
PRICE: £5.00

YOUR SOFTWARE WANTED NOW

WE PAY AUTHORS THE BEST RATES FOR THE BEST SOFTWARE.

BOMBER AND FRUIT MACHINE

Bomber: This fast-action game involves the destruction of cities quickly before you crash into the buildings.
Fruit Machine: Similar to the familiar one-armed bandit, with very realist graphics.
PRICE: £5.00

CRAZY RACE AND SUBHUNT

Crazy Race: You are driving around a racing track. How many obstacles can you run over before you crash?
Subhunt: You are a helicopter pilot firing down at submarines, destroying them before they destroy you.
PRICE: £5.00

ZX81 — Software

ZX VIDEO GAMES

This latest package of software to be released must surely be the most amazing available in the world. It features on one cassette all the fast action machine code games that other companies would sell for £5.00 each, but we are able to bring you all the following Machine Code Arcade games for that price. Not only are they excellent value for money but they are of the finest quality available for the ZX81. ZXVG contains:

UFO BOMBER

You are on a mission to destroy enemy fuel pumps and installations, eight directions of movement through caves, fuel dumps and over rocky lunar terrain. You drop smart bombs and can strafe with your gun that fires streaming laser shells. This game is completely addictive, and gives you on screen and Hi scores.

SPACE INVADERS

This is not our "version", this is just like the real thing, with four types of crawling invaders, defences that crumble as they are hit, UFO's for extra scores, Onscreen scoring and Hi scores. This game is brilliant!

GALAXIANS

Wave after wave of sweeping invaders drop their bombs at you. Your only hope is to dodge and destroy them. This is a most addictive game, and we guarantee that this game will make your ZX81 really come to life.

This game pack contains some other exciting machine code games, but you'll have to get a copy to find out what they are!

We absolutely guarantee that this will be the best value pack of video games software you have ever had, for quantity and quality. To make sure, just ask someone who has had this pack, enquire at your local computer shop, or send off for it to us.

 ALL PRICES INCLUDE VAT AND P&P.

ZX BUSINESS SYSTEM

Now installed in many businesses, comes with PURCHASE, SALES LEDGER for 100+ entries per week, does daybook analysis, VAT incl. and excl., totals, password protection plus many more excellent features. You also get a STOCK CONTROL, MAIL LIST and PHONEBOOK. Easy to use, designed for everyday small businesses. Includes instruction book and tape. £17.00 incl. VAT. And does the job of systems costing hundreds of pounds.

16K PACK 123

Pack 1, 2 & 3 include all of:

AIR TRAFFIC CONTROL: Animated radar screen of busy airport shown. You must bring planes into land; **INVADERS SELFPLAY:** PHONEBOOK — keep friends' and relatives numbers on cassette. **COMPUTER DATING,** who will it pick for you and those around you for a laugh. **ADVENTURE ATLANTIC:** you may become very rich or marooned forever. **BREAKOUT: SQUASH:** **LANGUAGE TRANSLATOR:** translates any European language to any other. **COMPUTAPUNT:** predict horse races and football pools with you ZX. **INDISCO,** video road racer. **DRAUGHTS** computer chequers, with kings. **BATTLESHIPS,** nautical naval battle at home. **MASTERMIND:** brain teaser, see if you can beat a microelectronic mind.
